

The "Grasshopper Mind"

YOU know the man with a "Grasshopper Mind" as well as you know yourself. His mind nibbles at everything and masters nothing.

At home in the evening he tunes in the wireless—gets tired of it—then glances through a magazine—can't get interested. Finally, unable to concentrate on anything, he either goes to the pictures or falls asleep in his chair. At the office he always takes up the easiest thing first, puts it down when it gets hard, and starts something else. Jumps from one thing to another all the time.

There are thousands of these people with "Grasshopper Minds" in the world. In fact they are the very people who do the world's most tiresome tasks—and get but a pittance for their work. They do the world's clerical work, and the routine drudgery. Day after day, year after year—endlessly—they hang on to the jobs that are small salaried, longest-houred, least interesting, and poorest future!

What Is Holding You Back?

If you have a "Grasshopper Mind" you know that this is true. And you know why it is true. Even the blazing sun can't burn a hole in a piece of tissue paper unless its rays are focused and concentrated on one spot! A mind that balks at sticking to one thing for more than a few minutes surely cannot be depended upon to get you anywhere in your years of life!

Half fees for serving and ex-Service members of His Majesty's Forces

(Apply for Services Enrolment Form)

The tragedy of it all is this: you know that you have within you the intelligence, the earnestness, and the ability that can take you right to the high place you want to reach in life! What is wrong? What's holding you back? Just one fact—one scientific fact. That is all. Because, as Science says, you are using only one-tenth of your real brain-power!

What Can You Do About It?

That is the question you are asking yourself. Here is the answer.

Take up Pelmanism now! A course of Pelmanism brings out the mind's latent powers and develops them to the highest point of efficiency. It banishes Mind Wandering, Inferiority, and Indecision, and in their place develops Optimism, Concentration, and Reliability, all qualities of the utmost value in any walk of life.

What is equally important, Pelmanism increases your happiness and enables you to develop a finer appreciation of the beauties of Nature, the Arts, and Life generally. In a sentence, Pelmanism enables you to live a fuller, richer, happier and more successful existence.

The Pelman Course is fully described in a little book entitled *The Science of Success*. The Course is simple and interesting; takes up very little time, and you can enrol on the most convenient terms. The book will be sent you, gratis and post free, on application to-day to:

PELMAN INSTITUTE

(Established over 40 years)

200, Norfolk Mansions, Wigmore Street, London, W.1

Readers who can call at the Pelman Institute will be welcomed.

PELMAN (OVERSEAS) INSTITUTES: NEW YORK, 271 North Avenue, New Rochelle. MELBOURNE, 396, Flinders Lane. JOHANNESBURG, P.O. Box 4928. DURBAN, Natal Bank Chambers (P.O. Box 1489). DELHI, 10, Alipore Road. CALCUTTA, 102, Clive Street.

The book should be returned on or before the date last stamped below.

1,088 pages - 12s. 6d. *net*

Abridged Edition, Orange Paper Cover, 704 pages 7s. 6d. *net*

PREFACE TO THE 78TH ANNUAL VOLUME (1946)

A Chronicle of the War, from the invasion of Poland to the unconditional surrender of Japan, is one of the principal features of the 78th annual volume of "Whitaker."

The results of the General Election, with the new Ministry and newly elected House of Commons, and the inclusion of articles and statistical tables dealing with matters of current interest, add to the value of this particular issue and swell the book beyond its former limits, in spite of efforts towards economy of space to meet the drastic curtailment of paper allotments.

The Editor desires once again to express his gratitude to all who have collaborated in the production of this volume, particularly to Civil Servants and other public officials who so obligingly complied with his request for the punctual return of proofs, and he ventures to express a hope that unofficial correspondents will remember to post their contributions to the 79th volume in time to reach the editorial office not later than the *first* day of October next.

WISDEN'S CRICKETERS' ALMANACK

PUBLISHED ANNUALLY ABOUT APRIL

"Wisden" is universally recognised as "The Cricketer's Bible." John Wisden, founder of the book, was a cricketer who played for Sussex, and in 1850 set up shop as a sports outfitter in Coventry Street, London. From his shop he issued in 1864 the first edition of "John Wisden's Cricketers' Almanack" which has since become the recognised authority on the game.

EACH ISSUE OF "WISDEN" CONTAINS FULL AND ACCURATE REPORTS AND FIGURES OF THE PREVIOUS SEASON'S CRICKET.

Wartime issues have had to be reduced in size because of paper restrictions, but they are all intensely interesting. The main contents of wartime issues are:

Index: Twenty pages of references, making it easy to find any particular section or item.

Special articles: Contributed by specialists on the game, these are always of substantial interest.

Reports and Scores of the principal matches played during the previous year, including all the famous wartime teams as well as teams from the Forces.

Cricket abroad, wherever it is played, is fully reported.

Roll of Honour, Deaths in the War, and Obituary for the previous year appear in each issue.

Fixtures for each year, and other items of interest, make regular appearances.

Size: Foolscap Octavo, 400 pages, 8 illustrations.

Approximate Prices of 1946 Editions:

Limp linen binding, 6/6 net or Cloth boards binding, 8/6 net.

							IN PERPETUITY.				
							33 33	25 00	20 00	16 66	14 28

EXAMPLE 1.—What is the present value of a Lease having 37 years to run of the net annual value of £100, interest being reckoned at 4 per cent? Answer:—19 14 years' purchase, or £1,914.

EXAMPLE 2.—A man, aged 35 in the receipt of a pension or annuity of £100 a year net, wishes to consult that for a present payment, interest being reckoned at 3 per cent. How much will he receive? Answer:—Looking at the Table of Expectation of Life, it will be seen that the expectation for age 35 is about 17 years; and

from the above table an annuity certain for 17 years interest at 5 per cent, is worth 12 27 years purchase. The present payment required would therefore be £1,227 approximately.

Note to Example 2.—This method is only approximate. The values of annuities which depend on lives of a given present age when properly calculated according to a given mortality table and a given rate of interest, are always somewhat less than those given by the method used in this example.

 A.I.M.T.A., — of Munic. Treas. and Accountants.
 A.Inst.P., — Do. Physics.
 A.I.O.B., — Do. Builders.
 A.K.C., — of King's College.
 A.L.A., — of the Library Association.
 A.L.A.A., — of the Assoc. of Certified and Corporate Accountants.
 A.M.I.A.E., — of the Institute of Automobile Engineers.
 A.M.I.Loco.E., — of Institute of Locomotive Engineers.
 A.R.A., — of Royal Academy.
 A.R.A.M., — of Royal Academy of Music.
 A.R.C.A., — of Roy. Coll. of Arts.
 A.R.C.M., — of Royal College of Music.
 A.R.C.O., — Do. Organists.
 A.R.C.S., — Do. Science.
 A.R.I.B.A., — of Royal Institute of British Architects.
 A.R.L.C., — Roy. Inst. of Chemistry.
 A.R.P.S., — of Royal Photographic Society.
 A.R.R.C., — of Royal Red Cross.

A.R.S.M., — of the Royal School of Music.
 A.R.San.L., — of the Royal Sanitary Institute.
 A.R.T.C., — of the Royal Technical Coll. (Glasgow).
 A.K.W.S., — of Royal Society of Painters in Water Colours.
 A.S.A.A., — of the Society of Incorporated Accountants and Auditors.
 A.T.I., — of Textile Institute.
 A.V.A., — of Valuers' Assn.
 Assoc.M.I.C.E., — Associate Member Institution of Civil Engrs.
 A.M.I.Chem.E., — Do. Chemical Engineers.
 A.M.I.E.E., — Do. Electrical Engineers.
 A.M.I.Mech.E., — Do. Mechanical.
 A.M.Inst.T., — Do. Institute of Transport.
 A.B., Able-bodied seaman.
 a.c., Account.
 A.C. (*Ante Christum*) = B.C.
 A.D. (*Anno Domini*), In the year of our Lord.
 A.D.C., Aide-de-Camp.
 Ad lib. (*ad libitum*), At pleasure.
 A.E.A., — Air Efficiency Award.
 A.E.C., Army Education Corps.
 A.F.C., Air Force Cross.
 A.F.S., Auxiliary Fire Service.
 A.H. (*Anno Hegiræ*), In the year of the Hegira.
 A.L. (*Anno Lucis*), In the year of Light.
 A.M. (*Ante meridiem*), Before noon.
 A.M. (*Anno mundi*), In the year of the world.
 A.M.C., Art Master's Certificate.
 A.M.D.G. (*Ad maiorem Dei gloriam*), To the greater glory of God.
 AMGOT. Allied Military Government of Occupied Territory.
 A.M.S., Army Medical Service or Staff.
 A.R.P., Air Raid Precautions.
 A.S. (*Anno Salvatoris or Salutis*), In the year of Salvation.
 A.S.A., Amateur Swimming Assn.
 A.T.A., Air Transport Auxiliary.
 A.T.C., Air Training Corps.
 A.T.S., Auxiliary Territorial Service.
 A.U.C. (*Anno urbis conditæ*), In the year from the foundation of Rome.

B

B.A., Bachelor of Arts.
 B.A.O., — of Obstetrics.
 B.Arch., — of Architecture.
 b.C.L., — of Civil Law.
 b.Ch. (or Ch.B.), — of Surgery.
 B.Com., — of Commerce.
 B.D.S. (or B.Ch.D.), — of Dental Surgery.
 B.D., — of Divinity.
 B.Ed., — of Education.
 B.Eng., — of Engineering.
 B.Litt., — of Literature.
 B.Phil., — of Philosophy.
 B.Sc., — of Science.
 B.Sc.Tech., — of Technical Science.

B.A.O.R., British Army of the Rhine.
 B.B.C., British Broadcasting Corporation.
 B.C., Before Christ.
 B.D.A., British Dental Assn.
 B.L.A., British Liberation Army.
 B.M.A., British Medical Assn.
 B.S.T., British Summer Time.
 B.V.M., Blessed Virgin Mary.

C

C.A., Chartered Accountant (and, in English Counties, County Alderman).
 C., Conservative.
 c. & b., Caught and bowled.
 Cantab., Cambridge.
 Cantuar., Canterbury.
 Cap. (Chapter), Number of Act of Parliament.
 C.B., Companion of the Bath.
 C.B.E., Commander of Order of British Empire.
 C.C., Common or County Council.
 C.D.A., College Diploma in Agriculture.
 C.D.H., Do. in Horticulture.
 C.E., Civil Engineer.
 C.E.M.A., Council for the Encouragement of Music and the Arts (Pilgrim Trust).
 cf. (*confer*), Compare.
 C.F., Chaplain to the Forces.
 C.G.M., Conspicuous Gallantry Medal.

Sum 10			
Table 4 ... 10 = Tuesday.			
Sum 27			
Table 4 ... 27 = Friday			

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1923. (See p. 185.)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; e.g. 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

BEING THE SECOND YEAR AFTER BISSEXTILE OR LEAP YEAR AND 10 AND 11 OF KING GEORGE VI.

25	F.	Conversion of St. Paul. Lord Leighton died,
26	S.	FOUNDATION DAY, AUSTRALIA (1788). [1896.
27	S.	3rd Sunday after Epiphany.
28	M.	Aliwal, 1846. Charlemagne died, 814.
29	Tu.	George III died, 1820. Earl Haig died, 1928.
30	W.	President F. D. Roosevelt b. 1882; died April 12,
31	Th.	Charles Haddon Spurgeon died, 1892. [1945.

PHENOMENA

Jan. 1d 15h. Mercury in conjunction with the Moon. Mercury 0°.2 N.

2. Earth in perihelion, i.e. at least distance (91,300,000 miles) from the Sun.

3d 12h. Partial eclipse of the Sun, visible only in southern and Antarctic regions. See page 158.

12. Saturn in opposition.

14. Mars in opposition.

17d 04h. Saturn in conjunction with the Moon. Saturn 2° S.

17d 07h. Mars in conjunction with the Moon. Mars 2° N.

22d 17h. Mars in conjunction with Saturn. Mars 4½° N.

24d 11h. Jupiter in conjunction with the Moon. Jupiter 4° S.

32. Venus in superior conjunction with the Sun.

CONSTELLATIONS

The following constellations are near the meridian at

Mean semi-diameter in arc 16'.3; in time 1m 10s.

* In the sense Apparent minus Mean. Throughout January subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is too far south to be seen from this country.

VENUS is too close to the Sun for observation. It is in superior conjunction on February 1.

MARS, retrograding in Gemini, is in opposition on January 14, in the high northern declination of 25°, so that it is well placed for observation in this hemisphere. When the opposition falls in August, Mars approaches to within 35,000,000 miles of the Earth; at this opposition it is 59,000,000 miles away—nearly as far as it can be at opposition. During its retrograding, Mars overtakes Saturn on January 22, passing 4½° to the north. After Mars begins to advance on February 22, it again passes Saturn on March 19, this time 3° N. Mag.—1.2.

JUPITER is a morning star in Virgo. It is moving southwards, and for the next four or five years is

better placed for observers in the southern hemisphere than in the northern. Magnitude —1.6.

SATURN, in Gemini, reaches opposition on January 12, so is high on the southern meridian at midnight. The rings, which have been opening for several years, are now beginning to close again, and will continue to do so for the next six years or so. They are divided into two portions by the so-called Cassini division, named after its discoverer. The apparent width of this division is just one fiftieth of the total diameter of the rings, and so is just about 1" in the extreme east and west portions, and (at present) about 0.4" in the direction of the poles of Saturn. The division can be seen with a telescope of 3 inches or more in aperture, provided the telescope is steady. Eastern elongations of the eighth magnitude satellite Titan occur on the mornings of January 3 and 19, and western on the evenings of January 10 and 26. Magnitude —0.2.

Mean semi-diameter in arc 16'.2; in time 1m 07s.

* In the sense Apparent minus Mean. Throughout February subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is in superior conjunction with the Sun on Feb. 11. As it then proceeds to move north of the Sun rapidly, it may perhaps be seen as an evening star towards the end of the month.

VENUS, being in superior conjunction with the Sun on February 1, is not visible this month.

MARS, retrograding in Gemini, was in opposition last month and so is now well placed for observation; retrograding ceases on Feb. 22. It fades rapidly during the month, from magnitude -0.8 at the beginning to 0.0 at the end.

JUPITER is still a morning star in Virgo, and now rises before midnight. On Feb. 12 it begins to retrograde. Magnitude -1.8.

SATURN, retrograding in Gemini, was in opposition last month, and is now an evening star in the east after sunset. Of its many satellites (nine have well-determined orbits) only the largest, Titan (discovered by Huyghens), which has a diameter of

about 3,500 miles, and is of the eighth magnitude, can be seen in a small telescope. Its orbit lies very nearly in the plane of the rings, and it takes almost exactly 16 days to make a complete circuit round Saturn—four from eastern elongation to inferior conjunction south (at present) of the planet, four more to western elongation, another four to superior conjunction to the north, and finally four more to eastern elongation again. At elongations its distance from Saturn is ten times the diameter of Saturn or four times the diameter of the rings; at conjunctions during this opposition the distance is rather less than half of this. Eastern elongations occur on the evenings of Feb. 3 and 19, and western on Feb. 11 and 27. See also notes in January. Magnitude 0.1.

URANUS, which was in opposition on Dec. 7 is about 2° to the east of the star τ Tauri, which may be identified by Norton's *Star Atlas* (see page 250). It is just on the borderline of naked eye visibility, but shows a distinct disc in a small telescope.

MONTHLY NOTES

- March 1. Auditors of Boroughs, Eng. and W., to be elected.
- Annual assembly of Parish Meetings in Rural Parishes, Eng. and W., to take place during this month.
6. Lent begins (ends at midnight, April 20).
8. Last day for sending list of persons employed in factories and workshops.
25. Lady Day. Quarter Day. Accounts of Local Government Authorities, Eng. and W., to be made up to 31st. Qr. Sessions to be held 21 days before or after this date.
25. Greek Independence Day (1821).
31. Financial Year 1945-46 ends.

Mean semi-diameter in arc 16'.1; in time 1m 05s.

* In the sense Apparent *minus* Mean. Throughout March subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY should be visible as an evening star during the first half of the month. Later it is too close to the Sun for observation, as it is in inferior conjunction on March 26.

VENUS may possibly become visible as an evening star towards the end of the month. Magnitude -3.4.

MARS, now advancing in Gemini, is an evening star, still fading rapidly. It overtakes Saturn on the evening of March 18-19, passing 3° to the north. Magnitude 0.3.

JUPITER, retrograding in Virgo near the star *Spica*, may be favourably observed in the late evening. During this and the next three or four

months, the satellites, with their ever-changing positions, can be seen in a small telescope, or even with binoculars. Eclipses may be seen (especially in May and later) while a well-mounted clock-driven telescope will show the transits of the shadows of the satellites. The elliptical shape of the planet is easily seen, as well as its surface features, known as belts. Details of satellite phenomena are given on page 162. Magnitude -1.9.

SATURN, in Gemini, now attains its meridian altitude of some 66° in the early evening, which is convenient for those who do not cultivate late hours. This is a good month for identifying Titan (see also notes in January and February) which is at eastern elongation on the evenings of March 7 and 23, and at western on March 15 and 31. Magnitude 0.2.

Mean Longitude of Ascending Node on April 1, 85°.	

MONTHLY NOTES

April 1. Refreshment House Licences to be renewed.

6. Old Lady Day.

7. Fire Insurances must be paid.

14. Parish Councils, Eng. and W., to hold their annual meeting on or within fourteen days after this date. Cuckoo Day.

*Summer Time 1946 should begin (in accordance with the Summer Time Act, 1925) at 2 a.m. April 14. In these pages G.M.T. (Greenwich Mean Time) is used throughout the year. To convert this to Summer Time, 1 hour must be added.

16. 1st day of Jewish Passover.

20. Lent ends at midnight.

22. Bank and General Holiday, Eng. and W.

23. Shakespeare born, 1564.

25. Gallipoli Day (1915).

Mean semi-diameter in arc 16'-0; in time 16 m 05s.

* In the sense Apparent minus Mean. From April 1-16 apply as in March (see page 107) and for the remainder of the month as in May (see page 115).

MORNING AND EVENING STARS

MERCURY, although a morning star, is not sufficiently high before sunrise to be seen.

VENUS, being north of the Sun, should now be visible as an evening star, although it is still six months before it attains its greatest brilliancy as such. Magnitude -3.3.

MARS, in Gemini and Cancer, just south of *Castor* and *Pollux*, is an evening star, but has now lost two magnitudes, or more than five-sixths of its opposition brilliancy in January; this is due to the rapid increase in its distance from the Earth, which passed the 100,000,000 miles mark late in March. Magnitude 0.9.

JUPITER, still retrograding in Virgo, comes to opposition on April 13, several degrees to the north of the first magnitude zodiacal star *Spica*. The meridian altitude during this opposition is only about 30°. Magnitude -2.0.

SATURN is still an evening star in Gemini, visible from sunset till after midnight. On the evening of April 8, when the Moon is at its first quarter, it passes less than 2° to the north of Saturn, i.e. above Saturn as seen in the sky. Eastern elongations of Titan occur on the evenings of April 8 and 24, and western on April 16. See also notes in January and February. Magnitude 0.3.

NEPTUNE. See notes in May and July.

Mean semi-diameter in arc 15'.8; in time 1m 07s.

* In the sense Apparent *minus* Mean. Throughout May add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY, although a morning star, is too close to the Sun for observation. It is in superior conjunction on May 31.

VENUS, in Taurus, is steadily improving as an evening star, and is now visible for more than an hour after sunset. Magnitude -3.3.

MARS, in the barren constellation of Cancer, is an evening star from sunset till midnight. On the evenings of May 5-8 it will be seen in the same binocular field as *Praesepe* or the Bee-hive cluster, which is a cloudy patch easily seen with the naked eye, but is resolved into individual stars with the least optical aid. Unfortunately the presence of the Moon, especially on May 7, may make the cluster a little difficult to see as Mars passes through its northern portion. Magnitude 1.3.

JUPITER, still retrograding in Virgo, was in

opposition last month, and is now favourably placed for observation for several hours after sunset. Magnitude -1.9.

SATURN is an evening star in Gemini, and is already setting when it becomes visible after sunset. This is about the last month in which the satellite Titan may be seen; it is at eastern elongation on the evenings of May 10 and 26, and at western on May 2 and 18. Magnitude 0.4.

NEPTUNE was in opposition on March 28, and so is favourably placed for telescopic observation in April, May and June. It is of the eighth magnitude and, with sufficient magnification, may be distinguished from neighbouring stars by its 2" disc. It is about half-way between the well-known double star γ Virginis and the fourth magnitude star η Virginis, which may be identified by Norton's *Star Atlas* (see page 150). See also note in July.

DAY OF	Month Week	 <i>Junius, Roman gens</i> (family). <i>Sun's Longitude 90° E 22° 02'</i> 	PHENOMENA
1	S.	Shannon captured <i>Chesapeake</i> , 1813.	June 2d ooh. Venus in conjunction with the Moon. Venus 0° 2 S. An occultation is visible in parts of U.S.A.
2	S.	Sunday after Ascension.	2d 18h. Saturn in conjunction with the Moon. Saturn 3° S.
3	M.	George V born, 1865.	4d 19h. Mars in conjunction with the Moon. Mars 3° S.
4	Tu.	Allied Armies entered Rome, 1944.	9. Uranus in conjunction with the Sun.
5	W.	Allied Control of Germany inaugurated, 1945.	9d 03h. Jupiter in conjunction with the Moon. Jupiter 4° S.
6	Th.	"D" DAY, 1944. R. C. Sherriff born, 1896.	12d 13h. Venus in conjunction with Saturn. Venus 1° 7 N.
7	F.	EASTER LAW SITTINGS END.	14. Total eclipse of the Moon. See page 158.
8	S.	Schumann born, 1810. Sir J. Millais born, 1829.	22d 01h. Sun enters sign Cancer (Solstice).
9	S.	White Sunday. Pentecost.	24d 03h. Mercury in conjunction with Saturn. Mercury 1° 5 N.
10	M.	Luis de Camoens died, 1580.	29. Partial eclipse of the Sun, visible only in Arctic regions. See page 158.
11	Tu.	St. Barnabas. John Constable born, 1776.	30d 10h. Saturn in conjunction with the Moon. Saturn 3° S.
12	W.	Ember Day. Anthony Eden born, 1897.	30d 23h. Mercury in conjunction with the Moon. Mercury 3° S.
13	Th.	KING'S BIRTHDAY (Official), 1946.	CONSTELLATIONS
14	F.	Ember Day. First Atlantic flight, 1919.	The following constellations are near the meridian at
15	S.	Ember Day. <i>Magna Carta</i> sealed, 1215.	
16	S.	Trinity Sunday. R.S.P.C.A. founded, 1824.	d h d h
17	M.	<i>Diamond Castle</i> lost, 1896.	May 1 24 May 16 23
18	Tu.	TRINITY LAW SITTINGS BEGIN. WATERLOO DAY	June 1 22 June 15 21
19	W.	James VI and I born, 1566. [(1815)]	July 1 20 July 16 19
20	Th.	<i>Corpus Christi</i> . Perugia captured, 1944.	Cassiopeia (below the Pole), Ursa Minor, Draco, Ursa Major, Canes Venatici, Bootes, Corona, Serpens, Virgo and Libra.
21	F.	Summer commences. Battle of Okinawa won,	
22	S.	Hitler invaded U.S.S.R., 1941. [1945]	
23	S.	1st S. after Trinity. Duke of Windsor b. 1894.	
24	M.	St. John Baptist. Marlborough born, 1650.	
25	Tu.	Diet of Augsburg, 1530.	
26	W.	United Nations Charter signed, 1945.	
27	Th.	Dettingen, 1743. C. S. Parnell born, 1846.	
28	F.	W.A.A.F. founded, 1939.	
29	S.	St. J. Mortimer Collins born, 1827.	
30	S.	2nd Sunday after Trinity.

MONTHLY NOTES

- June 4. Eton celebration day (George III's Birthday).
5. Constitution Day, Denmark.
5. Jewish Pentecost (Feast of Weeks) begins.
10. Bank and General Holiday, Eng. & W.
22. Longest day.
24. Midsummer Day. Quarter Day, Eng. & W. Sheriffs of London to be elected by the Liverymen.
- County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following June 24.

Mean semi-diameter in arc 15'.8; in time 1m 09s.

* In the sense Apparent *minus* Mean. From June 1-14 apply as in May (see page 115) and for the remainder of the month as in July (see page 123).

MORNING AND EVENING STARS

MERCURY was in superior conjunction with the Sun on May 31, but becomes visible as an evening star towards the end of the month. On the evening of June 23 it will be less than 2° north of Saturn.

VENUS, in Gemini and later in Cancer, is steadily drawing further from the Sun, and becoming easier to observe as an evening star. On the evening of June 1 there is a close approach to the Moon. Magnitude -3.4.

MARS is an evening star in Leo. On June 18 it passes less than a degree to the north of the first

magnitude star *Regulus*, which now outshines it. The 5-day old Moon passes 3° to the north on the evening of June 4. Magnitude 1.6.

JUPITER, still in Virgo, is visible from sunset till a little after midnight. By the end of the month it has ceased to retrograde and begun to advance once more. Magnitude -1.8.

SATURN, an evening star in Gemini, is now getting so close to the Sun that it will cease to be observable before the end of the month. Magnitude 0.4.

On June 14 the Full Moon will rise partly eclipsed. See page 118.

MONTHLY NOTES

July 1. Special Sessions for Licences to deal in Game to be held this month.

- Dividends due.
- Tynwald Day, Isle of Man.
- Old Midsummer Day.
- Double Seventh Day, China.
- Fire Insurances to be paid.
- French National Holiday.
- Belgian Independence Day (1831).
- Ramadan begins.
- Gun and Game Licences expire.

Mean semi-diameter in arc 15'.8; in time m 08s.

* In the sense Apparent minus Mean. Throughout July subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY, although an evening star, is not sufficiently high after sunset to be seen.

VENUS is an evening star in Leo. Although its distance from the Sun is increasing, it has a more southerly declination, and so is visible for only an hour—or less at the end of the month—after sunset. On the evening of July 12 it passes a degree north of *Regulus*. Magnitude -3.6.

MARS, an evening star in Leo, is now visible for a short while only after twilight. Magnitude 1.7.

JUPITER is an evening star in Virgo, gradually lessening its distance from *Spica*. Magnitude -1.6.

SATURN is in conjunction with the Sun on July 21, and so cannot be observed this month.

NEPTUNE.

This year marks the centenary of the discovery of the planet Neptune—one of the most dramatic triumphs of mathematical astronomy and the most startling vindication of Newton's law of universal gravitation. The ancients knew no planet beyond Saturn. The first addition to the family was in 1781 when the elder Herschel, using a telescope made with his own hands, discovered Uranus. In due course an orbit was computed for this planet, but, as time went on, it was found that this orbit did not represent observations perfectly. It is true that the departures were small, but at the same time they could not be explained away by any revision of the orbit. Similar troubles previously experienced with the orbits of Jupiter and Saturn had disappeared when the influence of Uranus

DAY OF		
Month	Week	
		 Julius Caesar <i>Augustus</i> , formerly <i>Sextilis</i> , 6th month (from March). <i>Sun's Longitude</i> 150° 11' 23 ^d 19 ^h 
1	Th.	Minden, 1759. Queen Anne died, 1714.
2	F.	Blenheim, 1704. Mascagni died, 1945.
3	S.	King of Norway born, 1872.
4	S.	7th S. aft. Trinity. QUEEN'S BIRTHDAY (1900).
5	M.	Grotto Day. First atomic bomb dropped, 1945.
6	Tu.	Transfiguration. Louise de la Vallière b. 1644.
7	W.	Sir Granville Bantock born, 1868.
8	Th.	Sir G. Kneller b. 1648. H. Spahlinger b. 1882.
9	F.	G. P. R. James b. 1799. Leoncavallo d. 1919.
10	S.	Otterburn, 1388. E. W. Lane died, 1876.
11	S.	8th Sunday aft. Trinity.
12	M.	F. A. Swinnerton born, 1884.
13	Tu.	Sir John Millais d. 1896. Florence Nightingale d.
14	W.	Richard Jeffries died, 1887. [1910.
15	Th.	VJ Day (1945). Robert Stephen Hawker d. 1875.
16	F.	Andrew Marvell d. 1678. T. E. Shaw b. 1888.
17	S.	Frederick the Great died, 1786.
18	S.	9th Sunday after Trinity. [1746.
19	M.	Manila Conference, 1945. Madame du Barry born,
20	Tu.	MOSQUITO DAY (1897) Gino Watkins died, 1932.
21	W.	Princess Margaret Rose born (1930).
22	Th.	Sir G. Taubman Goldie d. 1925; b. April 26, 1846.
23	F.	Baron Cuvier b. 1769. C. A. Coulomb d. 1806.
24	S.	St. Bartholomew. Lord Woolton born, 1883.
25	S.	10th S. after Trinity. Paris liberated, 1944.
26	M.	Crecy, 1346. Prince Richard born, 1944.
27	Tu.	Dresden, 1813. Viscount Cranborne born, 1893.
28	W.	General Louis Botha died, 1919.
29	Th.	Hugo Grotius died, 1645. O. W. Holmes b. 1809.
30	F.	Hong Kong reoccupied, 1945.
31	S.	Queen Wilhelmina born, 1880.

PHENOMENA

Aug. 2. Mercury in inferior conjunction with the Sun.

3d 01h. Jupiter in conjunction with the Moon, Jupiter 4° S.

9d 14h. Venus in conjunction with Mars. Venus 0°-6 S.

20. Mercury at greatest western elongation (181°).

24d 16h. Saturn in conjunction with the Moon. Saturn 3° S.

25d 12h. Mercury in conjunction with the Moon. Mercury 4° S.

29d 18h. Mars in conjunction with the Moon. Mars 5° S.

30d 12h. Venus in conjunction with the Moon. Venus 6½° S.

30d 18h. Jupiter in conjunction with the Moon. Jupiter 3° S.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
July	24	July 26 23
Aug.	22	Aug. 26 21
Sept.	20	Sept. 25 19

Draco, Hercules, Lyra, Cygnus, Sagitta, Ophiuchus, Serpens, Aquila and Sagittarius.

PHASES OF THE MOON

	d h m
) First Quarter.....	4 20 55
○ Full Moon.....	12 22 26
(Last Quarter.....	20 01 17
● New Moon.....	26 21 07

	d h
Apogee (251,320 miles)...	7 00
Perigee (228,980 ")...	22 10
Mean Longitude of Ascending Node on August 1, 78°.	

See note on *Summer Time*, page 120.

MONTHLY NOTES

August 1. Lammas. Scottish Term Day.

5. Oyster season opens.

5. Bank and General Holiday, Eng. and W. Royal Academy closes.

11. Half-Quarter Day, Eng. and W

12. Grouse shooting begins.

13. Old Lammas Day.

23. Old Half-Quarter Day.

25. Uruguayan Independence Day.

28. Ramadân ends.

Mean semi-diameter in arc 15'.8; in time 1m 05s.

* In the sense Apparent *minus* Mean. Throughout August subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is in inferior conjunction with the Sun on Aug. 2. There is a western elongation on Aug. 20, so it may perhaps be seen as a morning star for a few days near this date.

VENUS, although about 40° from the Sun, is so much further south in declination that it will be barely observable after sunset. Magnitude -3.8.

MARS, in Virgo, is now so faint and near the Sun that it will be difficult to detect, even for a few minutes after twilight. Just after sunset on August 3 Mars will be only 5' south of the fourth magnitude star β Virginis.

JUPITER is still an evening star in Virgo, but is rapidly approaching the Sun. The closest approach

to *Specta* occurs early in the month. Magnitude -1.4.

SATURN was in conjunction with the Sun on July 21, and so will begin to be visible as a morning star in Cancer towards the end of the month. Magnitude 0.5.

NEPTUNE—Continued from page 123.

was taken into account. So what was more natural than to suppose that the trouble with Uranus was due to a still more remote planet.

In the years 1844-45 two young mathematicians, both destined to become famous astronomers, independently set themselves the difficult task of calculating where such a planet must be. The usual problem in astronomy and physics is—given

MONTHLY NOTES

September 1. Partridge shooting begins. Salmon close-time begins. Lists of Jurors to be affixed to church doors for the first three Sundays.

8. Malta's National Day (1565).

11. Harvest Moon.

26. Jewish New Year (A.M. 5707).

28. Lord Mayor of London elected, Sheriffs of London to be sworn in.

29. Michaelmas. Quarter Day, Eng. and W.

— County Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Sept. 29.

Mean semi-diameter in arc 15'.9; in time 1m 04s.

* In the sense Apparent *minus* Mean. Except on September 1 (when the rule is reversed) add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is in superior conjunction with the Sun on Sept. 14, and cannot be observed this month.

VENUS, in spite of her greatest eastern elongation of 46° on Sept. 8, sets too soon after the Sun to be seen. This is always the case with an eastern elongation at the autumnal equinox, when the planet is far to the south of the Sun. In the southern hemisphere, on the contrary, the conditions could not be more favourable, and Venus will be a brilliant evening star. Magnitude -4.1.

MARS now sets too soon after the Sun to be observable.

JUPITER is visible as an evening star for a short while after sunset at the beginning of the month, but will be lost in the Sun's rays before the end of the month. Magnitude -1.3.

SATURN, in Cancer, is a morning star. At the end of the month it passes a degree south of *Præsepe* (see note on Mars in May). Magnitude 0.5.

URANUS is occulted on the morning of Sept. 18, as seen from Europe and North Africa. The time of reappearance at the dark limb at Greenwich is given on page 159.

NEPTUNE—Continued from page 127.

a cause to calculate its effect; here there was the far more involved inverse problem—given an effect to calculate its cause. One of the workers, J. C. Adams of Cambridge, communicated his results in October 1845 to Airy, the Astronomer Royal of the day. After a delay of nine months,

		 	<p><i>Octo</i> (eight), 8th month of Roman (pre-Julian) Calendar.</p> <p>*Sun's Longitude 210° in 24° or h</p>
1	Tu.	Annie Besant born, 1847. Paul Dukas born, 1865.	18d 13h. Saturn in conjunction with the Moon. Saturn 4° S.
2	W.	von Hindenberg b. 1847. Maréchal Foch b. 1851.	25d 09h. Jupiter in conjunction with the Moon. Jupiter 2° S.
3	Th.	William Morris died, 1896; born March 24, 1834.	26d 16h. Mars in conjunction with the Moon. Mars 2° S.
4	F.	Edmund Malone b. 1741. François Guizot b. 1787.	26d 23h. Mercury in conjunction with the Moon. Mercury 4° S.
5	S.	William Scoresby b. 1789. J. A. Symonds b. 1840.	27d 11h. Venus in conjunction with the Moon. Venus 7° S.
6	S.	16th Sunday after Trinity. George Westinghouse b. 1846.	31. Mercury at greatest eastern elongation (24°).
7	M.	Bidassoa, 1813. Sir Henry Tascherau b. 1836.	31. Jupiter in conjunction with the Sun.
8	Tu.	Archbishop Whateley d. 1863. Wendell Wilkie d.	31d 24h. Mercury in conjunction with Venus. Mercury 3° N.
9	W.	Duke of Kent born, 1935. [1944.	
10	Th.	Giuseppe Verdi born, 1813. Ivan Bunin b. 1870.	
11	F.	Camperdown, 1797. Joseph Gillott born, 1799.	
12	S.	MICHAELMAS LAW SITTINGS BEGIN.	
13	S.	17th Sunday after Trinity.	
14	M.	Senlac, 1066. Eamon de Valera born, 1882.	
15	Tu.	Allan Ramsay born, 1686. J. J. Tissot born, 1836.	
16	W.	Harper's Ferry, 1859. Eugène O'Neill born, 1888.	
17	Th.	Saratoga, 1777. Saint-Simon born, 1760.	
18	F.	St. Luke. Leipzig, 1813.	
19	S.	Tom Taylor b. 1817. Sir C. Wheatstone d. 1875.	
20	S.	18th Sunday after Trinity.	
21	M.	TRAFALGAR DAY (1805). J. H. Greathead, d. 1896.	
22	Tu.	L'Abbé Liszt b. 1811. C. A. Alington b. 1872.	
23	W.	Lord Jeffrey born, 1773. Paul Cezanne died, 1906.	
24	Th.	Sir Albert Sassoon died, 1896.	
25	F.	Agincourt, 1415. Balaclava, 1854.	
26	S.	Danton born, 1759. Viscount Sankey born, 1866.	
27	S.	19th Sunday after Trinity.	
28	M.	St. Simon and St. Jude.	
29	Tu.	Breda, 1944. Edmund Calamy died, 1666.	
30	W.	Dostoevski b. 1821. A. Bořar Law d. 1923.	
31	Th.	Hallowmas Eve. Angelica Kauffman born, 1741.	

PHENOMENA

Oct. 2. Neptune in conjunction with the Sun.

13. Venus at greatest brilliancy.

18d 13h. Saturn in conjunction with the Moon. Saturn 4° S.

25d 09h. Jupiter in conjunction with the Moon. Jupiter 2° S.

26d 16h. Mars in conjunction with the Moon. Mars 2° S.

26d 23h. Mercury in conjunction with the Moon. Mercury 4° S.

27d 11h. Venus in conjunction with the Moon. Venus 7° S.

31. Mercury at greatest eastern elongation (24°).

31. Jupiter in conjunction with the Sun.

31d 24h. Mercury in conjunction with Venus. Mercury 3° N.

CONSTELLATIONS

The following constellations are near the meridian at

	d h		d h
Sept. 1 22		Sept. 15 23	
Oct. 1 24		Oct. 16 21	
Nov. 1 20		Nov. 15 19	

Ursa Major (below the Pole), Cepheus, Cassiopeia, Cygnus, Lacerta, Andromeda, Pegasus, Capricornus, Aquarius and Piscis Australis.

PHASES OF THE MOON

Apogee (251,380 miles)...	1 14
Perigee (226,360 ")...	13 10
Apogee (252,010 ")...	29 09
Mean Longitude of Ascending Node on October 1, 75°.	

MONTHLY NOTES

October 1. Pheasant shooting begins. Latest day for receiving corrections for next year's "WHITAKER."

5. Yom Kippur (Jewish Day of Atonement).

6. Summer Time should end (in accordance with the Summer Time Act, 1925) at 2 a.m. Oct. 6.

10. Double Tenth Day (China).

10. Hunter's Moon.

10. Jewish Feast of Tabernacles.

11. Old Michaelmas Day.

12. Columbus Day, U.S.A. Fire Insurances must be paid.

24. Borough Councillors to be nominated.

28. Czechoslovak Independence Day.

29. Turkish National Holiday.

Mean semi-diameter in arc 16'.1; in time 1m 05s.

* In the sense Apparent *minus* Mean. Throughout October add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY reaches greatest elongation of 24° on the last day of the month but, like Venus, is too far south to be seen in this hemisphere.

VENUS reaches greatest brilliancy on Oct. 13, but is too low at sunset to be seen in this hemisphere. The conditions are just as favourable in the southern hemisphere as they are unfavourable here. Magnitude -4.3.

MARS is too close to the Sun for observation.

JUPITER is in conjunction with the Sun on Oct. 31, and so cannot be seen this month.

SATURN is a morning star in Cancer. By the end of the month it will be sufficiently high for observation by midnight. At the beginning of the month it is just a degree south of Praesepe (see note on Mars in May). Magnitude 0.5.

URANUS is occulted on the night of Oct. 14-15 (local dates). The occultation is visible from U.S.A. and Canada.

NEPTUNE—Continued from page 131.

Airy caused a search to be initiated by Challis, Director of the Cambridge Observatory. Having no adequate star maps of this region, Challis began to observe stars near the place indicated on two separated occasions, knowing that any fixed star would not change its position, so that a planet must be revealed by its motion.

The other worker, Leverrier of Paris, announced some of his results in November 1845, and in September 1846 enlisted the aid of Galle, of the Berlin Observatory, who was fortunate in having a recently published chart of this part of the heavens. On the night of September 23, the day Leverrier's letter was received, Galle found an

28	Th.	William Blake b. 1757. A. G. Rubinstein b. 1829.
29	F.	Donizetti born, 1798. C. J. Doppler born, 1803.
30	S.	St. Andrew. Winston Churchill born, 1874.

PHENOMENA

Nov. 14 08h. Mercury in conjunction with Venus. Mercury 3° N.

6d 08h. Venus in conjunction with Mars. Venus 5° S.

14d 20h. Saturn in conjunction with the Moon. Saturn 4° S.

15d 02h. Mercury in conjunction with Mars. Mercury 1° 0 S.

17. Venus in inferior conjunction with the Sun.

21. Mercury in inferior conjunction with the Sun.

22d 03h. Jupiter in conjunction with the Moon. Jupiter 2° S.

22d 21h. Venus in conjunction with the Moon. Venus 4° S.

23. Partial eclipse of the Sun. See page 158.

24d 18h. Mars in conjunction with the Moon. Mars 0° 5 S. Mars is too close to the Sun for the occultation to be seen.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Oct. 1	24	Oct. 16 23
Nov. 1	22	Nov. 15 21
Dec. 1	20	Dec. 16 19

Ursa Major (below the Pole), Cepheus, Cassiopeia, Andromeda, Pegasus, Pisces, Aquarius and Cetus.

Mean Longitude of Ascending Node on November 1, 73°.	

November 1. Hallowmas. Ordinary day of election of Borough Councillors.

4. Fox-hunting begins.

5. Guy Fawkes Day.

9. Lord Mayor's Day. Mayors and Aldermen of Boroughs to be elected and Sheriffs (except for London) appointed.

11. Martinmas. Half-Quarter Day, Eng. and W. Scottish Term Day.

12. County Sheriffs, Eng. and W., for next year nominated.

15. Brazilian National Day.

15. Solicitors', notaries', proctors' and sworn clerks' certificates expire. See Note, Dec. 15.

20. Constitution Day, Jamaica (1944).

21. Thanksgiving Day, U.S.A.

23. Old Martinmas.

25. Moslem New Year (A.H. 1366).

28. Removal Day, Scotland.

Mean semi-diameter in arc 16'.2; in time 1m 08s.

* In the sense Apparent minus Mean. Throughout November add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is in inferior conjunction with the Sun on Nov. 21 and cannot be observed this month.

VENUS is in inferior conjunction with the Sun on Nov. 17 and cannot be observed this month.

MARS is too close to the Sun for observation.

JUPITER was in conjunction with the Sun on the last day of October, and is still too close to the Sun for observation.

SATURN, now almost stationary about a degree to the east of the fourth magnitude star δ Cancr., rises well before midnight. See notes in January and February on the rings and satellites. Magnitude 0.4.

NEPTUNE—Continued from page 135.

eighth magnitude star not shown on the chart. A further observation on the following night

showed this star in a slightly different position. Neptune was discovered!

This unparalleled dual achievement was followed by a controversy as to where the credit was due. Adams had completed his work first, but had not published it. Challis had actually observed the planet twice, and would undoubtedly have discovered it when his comparisons were completed. The French at first repudiated the English claim, but eventually it was agreed that the honours should be divided. Nevertheless Airy's dilatoriness lost England the chance of having the honours undivided.

Neptune was nearly discovered before 1846. In 1795, on May 8 and 20, the French astronomer Lalande, who was making observations for a star catalogue, noted positions of a certain eighth magnitude star. When he came to compile his cata-

PHENOMENA

Dec. 8. Total eclipse of the Moon, visible in Great Britain. See page 158.

9. Mercury at greatest western elongation (21°).

12. Uranus in opposition. 12d 04h. Saturn in conjunction with the Moon. Saturn 4° S.

19d 21h. Jupiter in conjunction with the Moon. Jupiter 1° 2 S.

20d 02h. Venus in conjunction with the Moon. Venus 1° 3 N.

21d 22h. Mercury in conjunction with the Moon. Mercury 0° 8 N.

22d 11h. Sun enters sign Capricorn (Solstice).

23. Venus at greatest brilliancy.

23d 21h. Mars in conjunction with the Moon. Mars 1° 3 N.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h

Mean semi-diameter in arc 16'.3; in time 1m 11s.

* In the sense Apparent minus Mean. From December 1-25 apply as in November (see page 139) and for the remainder of the month as in January (see page 99).

MORNING AND EVENING STARS

MERCURY is a morning star, reaching greatest western elongation on Dec. 9, but is always too far south in December to be observed in this country.

VENUS is now a morning star, reaching greatest brilliance at Christmas time, when it may be seen for nearly three hours before sunrise. This condition must be nearly a repetition of that at the birth of Christ. On the morning of Dec. 20 Venus and the Moon are close together, with Jupiter only about 2° away. Magnitude -4.4.

MARS is too close to the Sun for observation.

JUPITER is now a morning star in Libra, rising shortly before sunrise. On the morning of Dec. 1 it passes about 1° north of the third magnitude star α Libra. Magnitude -1.3.

SATURN is retrograding towards the fourth magnitude star δ Cancer, which it passes some 4° to the north on Christmas eve. The rings (see note in January) are steadily closing. Magnitude 0.3.

For particulars of the total eclipse of the Moon visible in Great Britain on the evening of Dec. 8, see page 158.

NEPTUNE—Continued from page 139.

logue, he noticed that the two places were different, and rejected one of them. The star was the moving planet Neptune! Had Lalande had the courage to back his own observations, he might have had a minor triumph, and deprived astronomy of its greatest dynamical triumph 50 years later.

The discovery of Neptune did not completely remove all the troubles in the orbit of Uranus, nor

Mean semi-diameter in arc $16' 3$; in time $1m 10s$.

* In the sense Apparent minus Mean. Throughout January subtract from mean time to get apparent time, or add to apparent time to get mean time

MORNING AND EVENING STARS

MERCURY, which is in superior conjunction with the Sun on January 23, cannot be observed this month.

VENUS, which was at greatest brilliancy on Dec. 23, 1946, and will be at greatest western elongation of 45° on January 28, is still favourably placed as a morning star, although less so than last month.

MARS, which is in conjunction with the Sun on January 6, is too close to the Sun to be observed.

JUPITER is a morning star in Libra, rising in the south-east several hours before the Sun. As its greatest meridian altitude during the coming opposition will be about 20° , conditions for observation are not favourable. Magnitude -1.5 .

SATURN, retrograding in Cancer, is an evening star in the east visible at the beginning of

the month) some two hours after sunset. Early in the month it again passes less than a degree south of *Præsepe* or the Bee-hive cluster, which appears to the naked eye as a nebulous patch, but is easily resolved into separate stars by binoculars. See notes in January and February 1946. Magnitude 0.0.

NEPTUNE—Continued from page 143.

did Neptune itself behave perfectly. Thus led Lowell to investigate the possibilities of a trans-Neptunian planet. In 1930, after his death, such a planet—now named Pluto—was discovered at his observatory at Flagstaff, Arizona. It is not universally conceded that Lowell's calculations led directly to this discovery, particularly as the mass of Pluto seems to be small. But of the credit due to the painstaking observers who photographed likely parts of the sky until the planet was found there can be no doubt.

Introduction to Astronomical Section

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy, or use small telescopes. No attempt has been made to replace the *Nautical Almanac* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

In issues of this ALMANACK up to the year 1940 many of the ephemeral quantities were given for noon, which was, until 1925, the beginning of the astronomical day. On January 1 of that year the astronomical day was altered to coincide with the civil day, so that the beginning, or 0^h G.M.T., is now at midnight. Unfortunately the various ephemerides did not all change their standard epoch from noon to midnight in 1925—largely as a result of conservatism. The introduction of many changes in the presentation of this ALMANACK in 1941 provided an opportunity for falling into line with the now standard practice of tabulating for 0^h G.M.T.

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and textbooks. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 9th edition, 1943: 158.), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye.

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56°, are devoted to risings and settings, the range 50° to 58° is covered by interpolation and extrapolation. The times given in these columns are G.M.Ts. for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa. Allowance must also be made for Summer Time or Double Summer Time if in force.

In accordance with the usual convention in astronomy, northern latitudes and declinations are distinguished by the + sign, and vice versa. To save space these signs are often given as part of a column heading.

PAGE I OF EACH MONTH

The signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

The FASTS and FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other phenomena of special interest.

The CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22^h local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4^m earlier each night or 2^m earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

The principal PHASES OF THE MOON are the G.M.Ts. when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. The times of perigee and apogee are those when the Moon is nearest to and farthest from the Earth respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The right ascension given is that of the true Sun. The right ascension of the mean sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, easier still, by applying 12^h to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. The footnote given each month indicates when the numerical quantities given are to be added and when they are to be subtracted.

The Sidereal Time at 0^h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0^h) are used for converting mean time to sidereal time and vice versa, as illustrated on pages 153-154.

The time SUN SOUTHS is the G.M.T. of transit of the Sun at Greenwich, or the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Transport Lighting Act, 1927 defines Lighting-up Time for vehicles as being from one hour after sunset to one hour before sunrise, while Summer Time would normally be in force (April 14 to October 5 inclusive in 1946) and half an hour after sunset to half an hour before sunrise throughout the remainder

of the year. In all laws and regulations "sunset" refers to local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of *SUNRISE* and *SUNSET* are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be $34'$, and the Sun's semi-diameter to be $16'$, the time given is that when the true zenith distance of the Sun's centre is $90^\circ + 34' + 16'$ or $90^\circ 50'$, or, in other words, when the depression of the Sun's centre below the true horizon is $50'$. The upper limb is then $34'$ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is $90^\circ 50'$ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light continues to reach us for some time after sunset, and the interval between sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin and end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by Dr. L. J. Comrie, then Superintendent of H.M. Nautical Almanac Office, who proposed that the gathering darkness should be marked by four steps, to the last two of which he gave new names.

- (1) *Sunset*, defined as above.
- (2) *Civil twilight*, when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight must cease. In England it varies from about 30 to 50 minutes after sunset.
- (3) *Nautical twilight*, when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intents and purposes, completely dark.
- (4) *Astronomical twilight*, when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

These four steps, of which civil and nautical twilight had not previously been tabulated, were given for the first time in the *Nautical Almanac* for 1937. Civil and nautical twilight were given in WHITAKER'S ALMANACK for 1940, but cannot be repeated at present. However, they do not change from year to year and so can be obtained from that ALMANACK. They will be found of assistance in planning full use of the evening and morning light.

Under the heading MORNING AND EVENING STARS will be found notes describing the position and visibility of the planets; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, by an amount that may be as great as the horizontal parallax, i.e. nearly 1° .

The lunar terminator is the line separating the bright from the dark part of the Moon's disc. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The tabulated selenographic longitude of the terminator is measured from the mean centre of the visible disc, which may differ from the visible centre by as much as $8'$, because of libration. A positive sign indicates westerly longitude or to the right hand, and applies between New Moon and First Quarter or from Full Moon to Last Quarter. A minus sign indicates easterly longitude and applies from First Quarter to Full Moon and from Last Quarter to New Moon. When the Moon is passing from New to Full the line is called the morning terminator because the Sun is rising on the region of the Moon on which it falls; from Full to New it is the evening terminator. As the terminator changes at New or Full Moon, its longitude changes abruptly from -90° to $+90^\circ$. Interpolation between two such values may be performed by taking the complement of either of them to 180° , and changing the sign. Thus the value -88° on Jan. 3 may be treated as $+92^\circ$, or the value $+80^\circ$ on Jan. 4 may be treated as -100° .

The position angle of the terminator is the position angle of the northern cusp; it is subject to very rapid changes at New and Full Moon. The column PHASE shows the percentage of the area of the Moon's disc illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps,

and whose semi-axis minor is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

A knowledge of the light to be expected from the Moon is of value, especially in war time, as prominent objects and water areas can be easily seen in strong moonlight. Thus the age of the Moon, and its times of local rising and setting (which may vary even more than in the case of the Sun) need to be known. In summer the Full Moon never attains a great height, whereas in winter "the Moon rides high".

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about 9", and is negligible when considering sunrise and sunset, but that of the Moon averages about 57". Hence the computed time represents the moment when the true zenith distance of the Moon is 90° 50' (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes.

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and 56°. They give Greenwich Mean Time (G.M.T.) throughout the year; if Summer Time (B.S.T.) is in force, one hour must be added to get the time shown by civil clocks, or two hours if Double Summer Time is in force. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be added if west (as it usually is in Great Britain) or subtracted if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of 1° = 4^m and 15' = 1^m.

The column MOON SOUTHS gives the G.M.T. of transit of the Moon over the meridian of Greenwich. It is independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24° (or 360°) of the longitude, and will be greater than 12° (or 280°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is 150° 05^m east, so $\lambda = 13^h 55^m$ and the fraction $\lambda/24$ is 0.58. The Transit on the local date 1946 Jan. 15 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich	Jan. 14	22	33
λ			23 55
0.58 \times (22 ^h 34 ^m - 21 ^h 33 ^m) ..			35
G.M.T. of transit at Sydney...	15	22	03
Corr. to N.S.W. Standard Time			20 00
Local standard time of transit	15	22	03

It is evident, of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here 23^h 55^m.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disc. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

A departure has been made from the former practice of giving the times of rising and setting of the planets, as they cannot be seen when on the horizon. As a new standard of reference by which the visibility may be gauged, the time when the planet has an apparent altitude of 5° has been tabulated. Limitations of space have prevented the giving of the times when the planet attains this altitude in the east and in the west, but as one of these times always occurs while the Sun is above the horizon, that time has been omitted. In other words, the phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. when the planet souths at Greenwich is also given; it follows columns relating to times when the planet is in the east and precedes those relating to times when the planet is in the west. By this arrangement the times given for any date are consecutive, but it has sometimes been necessary to extend the hours beyond 24; thus Jan. 11^d 26^h is the same as January 12^d 02^h. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.Ts. of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which are from one hour after sunset to one hour before sunrise from April 14 to October 5 inclusive, and from half

an hour after sunset to half an hour before sunrise throughout the rest of the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is 10° high instead of 5° high are given, this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about $3''$ less than the equatorial diameter, while that of Saturn is about $2''$ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The last maximum opening of the rings was in 1944, so they are now closing each year; they will be completely closed about 1951 or 1952.

TIME

Greenwich Mean Time

Time is measured by the rotation of the Earth, and a solar day is the duration of a complete rotation of our sphere with respect to the Sun; it is rather longer than a rotation with respect to the stars, because of the revolution of the Earth round the Sun. The length of the solar day varies for two reasons, namely the ellipticity of the Earth's orbit and the fact that the plane of the equator does not coincide with the plane of the ecliptic. Mean time clocks are adjusted to an average or mean solar day which is of uniform length and is divided into 24 equal hours. The length of the mean solar day is constant, although that of the apparent day, or the interval from one transit of the Sun across the meridian to the next, varies for the reasons given above.

A unit and method of measurement having been established, it is necessary to choose a zero. The zero adopted is the instant when a fictitious body known as the mean Sun, which is sometimes before and sometimes behind the real Sun, is on some chosen meridian. The time is called the local mean time of any place through which that meridian passes. Usually some standard meridian, such as that of Greenwich, is chosen, and the time of that meridian is used throughout a whole country; hence the expression Greenwich Mean Time arises.

Apparent Solar Time

The time shown by a sundial is called apparent solar time. It differs from mean solar time by the equation of time, which is the total effect of the two causes mentioned that make the length of a solar day not uniform.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. As that point has a slow retrograde motion ($50''$ a year), known as precession, the length of the sidereal day, or $23^{\text{h}} 56^{\text{m}} 04^{\text{s}}.091$ of mean time, is $0^{\text{s}}.009$ less than the true period of rotation. The zero for sidereal time is when the First Point of Aries is on the meridian. In observatory practice sidereal time is found by comparing the observed time of transit of a star, as recorded by a sidereal clock, with the known true time of transit, namely the star's apparent right ascension. Any discrepancy, when adjusted for certain instrumental corrections, is the error of the sidereal clock. From this corrected sidereal time, the error of a mean time clock is found by comparison and computation as described below.

To convert standard mean time to local sidereal time, if many conversions are to be done for any one place, we may form once and for all the constant P , defined as

P = longitude of standard meridian + acceleration corresponding to this longitude — local longitude

where the acceleration of sidereal on mean time is taken from the table on page 157. West longitudes are considered to be positive, but, to avoid any subtractions, negative values of P may be replaced by their complement to 24^{h} . Then

L.S.T. = sidereal time at 0^{h} G.M.T. (page II of each month) + P + standard mean time + acceleration corresponding to this time.

Example.—Required the L.S.T. at Melbourne (Long. = $9^{\text{h}} 39^{\text{m}} 54^{\text{s}}$) at 1946 February 26^d 12^h 34^m 56^s Standard Time (10^{s} fast on G.M.T.).

	h	m	s
Long. of standard meridian...	— 10	00	00
Acceleration (same sign).....	—	1	39
Sum	— 10	01	39
Local long. with reversed sign.	+ 9	39	54
P	—	21	45
Complement to 24^{h}	23	38	15
For the given mean time	h	m	s
Sidereal time (page 103).....	10	20	57
P , as found above.....	23	38	15
Standard mean time.....	12	34	56
Acceleration from page 157		1	58
(always positive)			6
Sum = L.S.T.	22	36	12

One line may be saved by making a special table in which P is combined permanently with the acceleration for integral hours. Such a table for Melbourne would have the entry $23^{\text{h}} 40^{\text{m}} 13^{\text{s}}$ (= $23^{\text{h}} 38^{\text{m}} 15^{\text{s}} + 21^{\text{s}} 58^{\text{s}}$) for the argument 12^{h} .

To convert local sidereal time to standard mean time we may first form the constant Q from

Q = local longitude - retardation corresponding to this longitude - longitude of standard meridian.

For Melbourne			
Local longitude	-	9 39 54	
Retardation from page 157 (opposite sign)	+	1 28	
Long. of standard meridian, with reversed sign			7
Sum = Q	+	10 00 00	
			21 41

We then have

Standard mean time = preceding transit of First Point of Aries (page II of each month) + Q + L.S.T. - retardation corresponding to L.S.T.

To reverse the above example, we first note that the L.S.T. is greater than the complement to 24^h of the transit of Aries, so that the transit required is that on Feb. 25.

Transit of Aries (page 103)...	25	13 40 45		
Q , as found above			21 41	
L.S.T.		22 36 12		
Sum	26	12 38 38		
Retardation from page 157 (always negative)			3 36	
				6
Sum = standard mean time ..	26	12 34 56		

An alternative method is:

Standard mean time = (L.S.T. - sidereal time at 0^h G.M.T., as tabulated) - retardation corresponding to this difference + Q .

In the example

L.S.T.		22 36 12		
Sidereal time at 0 ^h		10 20 57		
Difference		12 15 15		
Retardation from page 157 (always negative)			1 58	
				2
Sum		12 13 15		
Q , here positive			21 41	
Sum = standard mean time		12 34 56		

Rhythmic Time Signals

For the purpose of comparing the time shown by a distant clock with that of the Greenwich standard, signals of the rhythmic or Vernier clock type are broadcast from the Post Office Wireless Station at Rugby each day at 10^h and 12^h. The zero signal coincides exactly with a beat of the standard clock, and those that follow are at intervals of 60/61 seconds. The comparison is made by noting the coincidence of a beat of the distant clock, beating seconds, with a signal. If a tick of the clock coincides with the zero signal, it is clear that the clocks differ by an integral number of seconds. If, however, coincidence does not come at the zero signal, but at the n th signal, the difference of the clocks in seconds is that integral number with $n/61$ added.

Summer Time

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. An Act of 1922 specified the period more precisely. The practice was stabilised (till the war in 1939) by the *Summer Time Acts, 1922 to 1925*, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April, and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the war the duration of Summer Time was extended, and in parts of 1941 to 1945 a Double Summer Time was in force. The dates of the actual duration of Summer Time since its inception are:

1916	May 21	to October 1
1917	April 8	to September 17
1918	March 24	to September 30
1919	March 30	to September 29
1920	March 28	to October 25
1921	April 3	to October 3
1922	March 26	to October 8
1923	April 22	to September 16
1924	April 13	to September 21
1925	April 19	to October 4
1926	April 18	to October 3
1927	April 10	to October 2
1928	April 22	to October 7
1929	April 21	to October 6
1930	April 13	to October 5
1931	April 19	to October 4
1932	April 17	to October 2
1933	April 9	to October 8
1934	April 22	to October 7
1935	April 14	to October 6
1936	April 19	to October 4
1937	April 18	to October 3
1938	April 10	to October 2
1939	April 16	to November 19
1940	February 25	to December 31
1941	January 1	to December 31*
1942	January 1	to December 31*
1943	January 1	to December 31*
1944	January 1	to December 31*
1945	January 1	to October 7*

* Double Summer Time:

1941	May 4 to August 20
1942	April 5 to August 9
1943	April 4 to August 15
1944	April 2 to September 17
1945	April 2 to July 25

Some of the astronomical information in this ALMANACK has been taken from the *Nautical Almanac*, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

The Zodiac.

THE Zodiac is an imaginary ring or broad circle in the heavens in form of a belt or girdle within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallel lines encircling the heavens, generally taken as 18° apart, and in the middle of which runs the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts, each of 30 degrees in length, that are called Signs, which are of no astronomical import beyond the fact that they indicate stages in the Sun's journey, but they may have their use in astrology, and the division of the Zodiac was probably made in connexion therewith. The "Signs" take their names from certain of the constellations with which they respectively coincided at a certain period. The history of the constellations or grouping of stars in the sky is almost a matter of mythology, and there is no certain knowledge of when or by what nation or race they were formed, but undoubtedly the twelve constellation figures that lie in the Zodiac as defined have been considered of special importance, for indications of them are found more than those of others on monuments of great antiquity and their names are used as those of the Signs. The Signs of the Zodiac are taken as beginning at the Vernal Equinox or the intersection of the plane of the Ecliptic with that of the Equator, which is adopted as the point where the Sun begins its annual journey, but the position of the Equinox is continually changing by reason of a fact called Precession, and hence since the Signs retain their original names they do not now coincide with the star-groups whose names they bear, and Aries the Ram, which was originally and is still taken as the first of the Signs, is now in the constellation Pisces, which precedes it by about 30 degrees in their daily course.

The known rate of motion of the Equinox among the stars due to Precession shows that this starting point must have been established rather more than 2,000 years ago, or about the time of the Greek astronomer Hipparchus, who lived in the second century B.C., and may be considered the founder of accurate sidereal astronomy. But from other evidence the Zodiac itself appears to be earlier, and it is said to have had its origin with the ancient Hindus and to have passed westward through Persia, Arabia, Babylon, Egypt, to Europe, as traces of the Zodiac have been found in all those countries: the Houses of the Sun mentioned in Babylonian records were doubtless to the Babylonian astrologers the equivalent of the Signs of the Zodiac used by those of later date, and the point has been taken that since the Vernal Equinox was in the constellation of the Bull 4,000 years ago, the Sign that bears that name was then the first of the twelve and the prominent Pleiades group which appears on many ancient monuments and its principal star Alcyone were leading objects to the astronomers or astrologers of that date, but there is no direct evidence that compels us to accept Taurus as the beginning of the Zodiac.

Much mystical erudition has been bestowed upon the Signs of the Zodiac, but passing over suggestions that the conception of the Zodiac is of divine revelation and that the figures in the sky have some association with the Cherubim and Seraphim of the Bible, we are on surer ground in noting that Mazzaroth (Job xxviii, 32), which means to encircle or

surround, was the Hebrew name for the Zodiac. The latter word is evidently of Greek derivation, and Sir George Cornwall Lewis quotes *ζωδιακός* as used by Herodotus to represent sculptured figures of animals on a goblet, and hence *ὁ ζωδιακός ζωδιακός* may well be accepted as the name of this band in the sky.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiacal or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped upright black stone about 2½ feet high and 1½ feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near the Tigris opposite Bagdad and its date is estimated to be about 1287-1175 B.C. It appears to be one of those Pillar Stones called Masebah that the Hebrews were commanded to destroy (Exodus xxiii, 24; xxxiv, 13). There are others of the kind, but these stones have relation to purely mundane affairs, and the symbols are those of deities invoked, some of which may be or may resemble those of astral character. A circular plansphere containing the twelve Signs as now used with thirty-six other constellations, said to be the only ancient circular plansphere extant, that was found on the ceiling of a chamber in the temple of Isis at Tentyra, near Denderah, Upper Egypt, is of considerable note. It was removed to the hall of the Bibliothèque Nationale, Paris, in 1821. The date of this has been the subject of much research, 716 B.C. being assigned by one authority, though there have been earlier, perhaps rather fanciful, estimates. Recent opinion affirms that its creation is not earlier than the first century of our era. On the title-page of WHITAKER's Zodiac is depicted, with the Signs, anti-clockwise, or in what is known as the Egyptian order: in the issues of the Almanack prior to 1888, they were given in clockwise order. The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page I of each month, since it may be of use to those who practise astrology. These times of entry in 1946 are shown in the Table below with the names of the signs and their symbols.

SIGNS OF THE ZODIAC.

In 1946 the Sun enters—

	d	h
♊ Aquarius, the Water Bearer	Jan. 20	16
♋ Pisces, the Fishes	Feb. 19	06
♈ Aries, the Ram	Mar. 21	06
♉ Taurus, the Bull	April 20	17
♊ Gemini, the Twins	May 21	17
♋ Cancer, the Crab	June 22	02
♌ Leo, the Lion	July 23	12
♍ Virgo, the Virgin	Aug. 23	19
♎ Libra, the Balance	Sept. 23	16
♏ Scorpio, the Scorpion	Oct. 24	02
♐ Sagittarius, the Archer	Nov. 22	22
♑ Capricornus, the Sea Goat	Dec. 22	11

SUNRISE AND SUNSET TABLE

Dec.	Latitude and Declination of Opposite Signs						Latitude and Declination of Same Signs							
	50°	45°	40°	30°	20°	10°	0°	10°	20°	30°	40°	45°	50°

The local mean time of sunrise or sunset (as defined on page 151) may be found by determining the appropriate hour angle from the table above and subtracting it from or adding it to the time of "Sun Souths" given in the ephemeris for each month. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12^h 30^m fast on G.M.T.) of sunset on May 24

at Auckland. The latitude is 36° 50' south (or minus) and the longitude 12^h 39^m east. Taking the declination as +20° 6', we find

This table gives the correction to be applied to an observed altitude of *Polaris* (first corrected for dip, refraction and instrumental error) to give the latitude. It is correct within 1' throughout the year for all latitudes up to 60°.

Example.—On July 4 at 23^h 17^m G.M.T. in longitude 2^h 34^m west, the altitude of *Polaris*

(corrected for dip, etc.) is found to be 41° 56'. The local sidereal time is found by the method given on page 153 to be 15^h 34^m. Hence

Observed altitude	41	56
Correction from table..		+53
Latitude	42	49

MEAN AND SIDEREAL TIME

Acceleration				Retardation				MEAN REFRACTION	
h	m	s		h	m	s		Alt. Ref.	Alt. Ref.
1	0	10	13	2	08	0	00	0	0
2	0	20	14	2	18	3	03	1	20
3	0	30	15	2	28	9	09	2	30
4	0	39	16	2	38	15	15	3	40
5	0	49	17	2	48	21	21	4	50
6	0	59	18	2	57	27	28	5	60
7	1	09	19	3	07	33	34	6	70
8	1	19	20	3	17	39	40	7	80
9	1	29	21	3	27	45	46	8	90
10	1	39	22	3	37	51	53	9	100
11	1	48	23	3	47	57	59	10	110
12	1	58	24	3	57	60	00	11	120

The length of a sidereal day in meantime is 23^h 56^m 04^s. 09. Hence $h^h M.T. = h^h + 9^s.86$ S.T. and $h^h S.T. = h^h - 9^s.83$ M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these two entries is the

required acceleration or retardation. Thus the acceleration for 11^m 26^s (which lies between the entries 9^m 07^s and 15^m 13^s) is 2^s. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for 45^m 46^s is 7^s.

Example.—Convert 14^h 27^m 35^s from S.T. to M.T.

	h	m	s
Given S.T.	14	27	35
Retardation for 14 ^h		2	18
Retardation for 27 ^m 35 ^s ..			5

Corresponding M.T. 14 25 22

For further explanation, see pages 153-154. The refraction table is also in the form of a critical table.

CELESTIAL PHENOMENA FOR OBSERVATION IN 1946

ECLIPSES

In the year 1946 there will be six eclipses, namely four partial eclipses of the Sun and two total eclipses of the Moon.

I. A partial eclipse of the Sun on Jan. 3, visible only in high southern latitudes. At mid-eclipse just over half of the Sun is obscured.

II. A partial eclipse of the Sun on May 30, visible only in the Southern Pacific Ocean between New Zealand and Chile. At mid-eclipse (about 21h G.M.T.) seven eighths of the Sun is obscured.

III. A total eclipse of the Moon on June 14, visible in Antarctica, New Zealand (but not the end), Australia, the Indian Ocean, Asia (except the northern and north-eastern parts), Europe (beginning visible in south-eastern parts only), Africa (beginning visible in south and east only); the end is visible also in the South Atlantic Ocean. The eclipse begins at 16h 44m G.M.T. and lasts till 20h 34m. Totality lasts from 17h 53m to 19h 25m; this is an unusually long duration. The low declination of the Moon will favour observers in the southern hemisphere, especially those bordering on the southern Indian Ocean. In Great Britain totality is over before moonrise.

IV. A partial eclipse of the Sun on June 29, visible only in Arctic regions. Even at the time and place of greatest eclipse, less than one fifth of the Sun is hidden by the Moon.

V. A partial eclipse of the Sun on Nov. 23, visible in the central and eastern parts of North America, and in the North Atlantic Ocean. At the time of greatest obscuration, which occurs at approximately 17h to 18h G.M.T., three quarters of the Sun is eclipsed.

VI. A total eclipse of the Moon on Dec. 8, visible in the Arctic Ocean, the north-western part of North America, the northern and western parts of the Pacific Ocean, New Zealand (beginning only), Australia, the Indian Ocean, Asia, Europe (beginning not visible in Spain and Portugal) and Africa (beginning visible in eastern parts only). The eclipse lasts from 16h 10m G.M.T. to 19h 26m. Totality begins at 17h 19m and lasts till 18h 17m. The whole of the eclipse is visible under favourable circumstances in Great Britain, the beginning being shortly after sunset, while the Moon is still low in the east.

OCCULTATIONS OF STARS.

There are no occultations of first magnitude stars to record in 1946, and only one of a second magnitude star, namely, α Sagittarii on Oct. 30, visible in U.S.A. and Canada. A somewhat unusual occurrence is several occultations of the planet Uranus, although none are visible in Great Britain under favourable conditions.

The list on the opposite page includes all

occultations visible under favourable conditions in the British Isles. Owing to the paucity of good occultations, some faint stars that would not normally be included have been given. At the bright limb disappearances have been restricted to stars of the fourth magnitude or brighter, and reappearances to stars of the third magnitude or brighter. At the dark limb disappearances are given down to sixth magnitude and reappearances to fifth magnitude.

No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. Times and position angles (P), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. $51^\circ 29'$, Long. 0°) and Edinburgh (Lat. $55^\circ 56'$, Long. $3^\circ 11'$ west). The coefficients a and b are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively; they enable approximate times (to within about 1m generally) to be found for any point in the British Isles. If the point is $\Delta\lambda$ degrees west and $\Delta\phi$ degrees north, the approximate time is found by adding $a \cdot \Delta\lambda + b \cdot \Delta\phi$ to the given G.M.T.

As an illustration the disappearance of ν Virginis on Nov. 18 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude	0.0	+3.2
Long. of Liverpool ...	+3.0	+3.0
$\Delta\lambda$	+3.0	-0.2
Latitude	51.5	55.9
Lat. of Liverpool	53.4	53.4
$\Delta\phi$	+1.9	-2.5
G.M.T.	h m	h m
$a \cdot \Delta\lambda$	4 06.6	4 03.7
$b \cdot \Delta\phi$	-1.8	+0.1
G.M.T. at Liverpool ..	-1.3	-0.5
	4 03.5	4 03.3

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

No occ. = star not occulted.
 Low = star's altitude less than 10° .
 Sun = Sun not sufficiently below the horizon.
 Graze = occultation is of very short duration.

It will be noticed that in some cases the coefficients a and b are not given; this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

Variable magnitudes.—γ Cassiopeiae 1.6 to 2.3, α Ceti 2.0 to 9.6, Betelgeuse 0.1 to 1.2.

The position of a star is defined by its Right Ascension and Declination, which are co-ordinates analogous to longitude and latitude on the terrestrial sphere. The lines of reference on the celestial sphere depend on the position of the axis of the Earth, and since, for reasons known generally by the word Precession, this position has a continual small movement with respect to the stars, Right Ascension and Declination change annually by an amount that can be computed by formula. Observation of position of the stars shows that they do not conform precisely to this computed precessional change, and the outstanding amount for individual stars, known as Proper Motion (see page 165), is shown in two columns of the adjoining table. The angular parallax of a star is the angle that the mean radius of the Earth's orbit would, placed squarely, subtend at the star, and is therefore inversely proportional to its distance, and hence is a measure of that distance. The parallaxes in the adjoining table are mainly trigonometric (see p. 165) and are taken from the General Catalogue of Parallaxes collected by Dr. Frank Schlesinger of Yale. The entry 000 indicates that the star is especially distant, and for some few stars no value is available. The last column shows the distance from the

Fixed Stars

Variable magnitudes.—β Lyræ 3.4 to 4.1.

Sun in parsecs corresponding to the parallax (see p. 165). Sirius and Procyon have faint companions, Castor, ζ Herculis, γ Virginis and α Centauri are binary stars, ε Hydræ is a multiple system, and of these the place given is either that of the centre of gravity or of the mean star.

These tables give Mean places on Jan. 1. The position on any other day differs from this because of Precession, Nutation, Aberration and Proper Motion. The Mean place with these effects added is called the Apparent place, and for navigation, surveying or like purpose it is the Apparent place that is required.

Jupiter's satellites transit across the disc from east to west, and pass behind the disc from west to east. The shadows that they cast also transit across the disc. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb, and reappears from eclipse to the east of

the planet. At times approximately two to four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

The list of phenomena given includes all the eclipses and some of the shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse c. = commences
Sh. = Shadow transit f. = finishes
Tr. = Transit of the satellite

The Stellar System

The objects of the sky, Sun, Moon, Planets, Stars, appear to us to be fixed on the interior surface of a hemisphere of which the observer is the centre. Actually the various classes of objects are at very different distances. The Moon, our nearest neighbour, is 240,000 miles from us; a distance which light, travelling at the rate of 186,000 miles a second, traverses in less than a second and a half. Of the bodies of the Universe whose distance is known, the farthest is so remote that its light takes perhaps 100,000,000 years to reach us. The nearest star to the Sun is more than eight thousand times as far from it as is the planet Neptune. It is the purpose of modern astronomy to investigate the method of distribution of these bodies in space, their movements and their sizes. Cosmical Physics attempts to deduce their physical nature, and that of cosmical matter in general, from the observations of the astronomer, combined with knowledge gained in the laboratory, for the purpose of elucidating their past and future history. The total number of stars of magnitude 6th and brighter, which is sometimes taken as the limit of naked-eye visibility, is about 4,300, of which 3,000 are visible during the year from latitude 60°, but a more generous estimate, which includes the cases when two faint stars close together are seen as one, sets the whole number at 10,000. By the aid of the photographic plate objects are detected and recorded which no eye can see, even with the best optical aid, and from counts on such plates estimates have been made of the whole number of stars existing. 2,000,000,000 was once assigned as a limit to their number, but this has been much increased by various estimates. 50,000 millions may be taken as the possible total number of stars in the galactic system (*v. infra*), though twice that number has been mentioned as a reasoned estimate. The number in the whole of space is incalculable.

THE STRUCTURE OF THE UNIVERSE.

The stars as seen are classed according to their apparent brightness and down to the 6th or 10th magnitude the number of each magnitude is known, all to this order having been catalogued. For fainter stars the numbers have been derived from counts in sample areas. If the Universe is an aggregation of stars in which the individuals of each degree of intrinsic brightness are distributed uniformly throughout an endless space, it can be shown that the number of stars brighter than the 4th magnitude would be about four times as great as the number brighter than the 3rd; the number brighter than the 5th would be greater than the number of those brighter than the 4th in the same ratio, and so on indefinitely. When the numbers of stars of different magnitudes obtained by counts are compared, it is found that in the case of the brighter stars this star-ratio, as it is called, approaches but does not attain the theoretical value 3.68, and that the ratio decreases continually as the stars are fainter, until at the 16th magnitude it is only about two. The explanation of this observed fact is that the universe of stars accessible to vision is limited; either there are few or no stars beyond a somewhat indefinite boundary, or we are prevented from seeing them by absorbing material distributed throughout interstellar space.

It is established from counts and measured distances that around our Sun the stars are fairly uniformly distributed at the rate of about one per 10 cubic parsecs. It is obvious that a

uniform distribution of this nature cannot go on indefinitely, for, if it did, the background of the firmament would be bright, since in whatever direction we looked we should, in time, come to a star.

For a casual glance it is clear that the stars are not uniformly distributed over the sky, but have a tendency to congregate near the great belt of cloud-like forms which encircle the heavens, known as the Milky Way or Galaxy. Applying the method of sounding by "star ratios" above outlined, it is found that the stars appear to thin out less rapidly as we go out in the plane of the Milky Way than they do in the direction of the galactic poles. The deduction is obvious; the boundaries of the stellar system are more distant in the plane of the Galaxy than they are at the poles. In other words, the stellar system is an extremely flattened organisation, whose general form is, roughly, that of a double convex lens or of a watch. Looking along the galactic plane we find the stars crowding together, as we should expect, since this is the direction of greatest extension, and the Milky Way is therefore largely a depth effect. But examination of its prominent features, the great star-clouds, the irregularities in its form, and the deep rifts in its structure, shows that its appearance is not wholly due to depth, and that the reason is the home of bodies and masses other than uniformly distributed stars. This aggregation is known as the Galactic System; it has been called the Stellar Universe, or the Universe, but the name is scarcely well chosen because, as will be seen below, there are other aggregations which make this system merely a unit in an immense number of such denizens of space.

Statistical study of the brighter stars has led to a view that they form a local group which comprises our Sun, and is of the shape, generally, of the larger system spoken of, but with their fundamental planes slightly inclined one to the other, which has led to a suggestion of the existence of similar systems, all lying more or less in the Galactic plane, that are seen as star clouds in the Milky Way. But this plausible theory is not now accepted by all.

Seen in and about the Milky Way are irregular nebulae (*see p. 166*) of which the nebula in Orion is one of the most remarkable, that are found to be comparatively near objects and are to be considered as within the Galaxy. But besides these there are nebulae of another type that are not seen about our central Galactic plane and are thought to be very distant from our Sun. Viewed with a powerful telescope these are resolved into spots of light believed to be stars. There are known to be masses of dark nebulosity in space that appear as rifts in the Milky Way, obscuring the stars behind, and it has been suggested that the absence of these nebulae from the region of the Galaxy is due to this cause. Such nebulae were called by William Herschel "Island Universes." They are now more often called extra-galactic nebulae, and being, to some degree, of the same shape as, and bearing other resemblance to, our own galactic system, are believed to be similar systems perhaps in course of making. The clouds of Magellan, the nearest of the external galaxies, is estimated to be about 100,000 light-years from us; the most distant has been found to be perhaps 400 million.

The following summary of present day ideas is given by an authority with the reservation that the figures, though in accordance with the

most recent results obtained, are not to be considered as final.

We have a great central disc of stars distributed in an irregular manner in groups or clusters, with possibly a spiral arrangement like the Andromeda Nebula. It is maintained in its flattened form by rotation which is controlled by the gravitation of the whole system, the mass of this being 160,000 million times that of the Sun. The total mass of all the stars in the system is not more than half this, so the other half is due to the diffuse absorbing matter. This system has an effective diameter of 200,000 light-years and its thickness near the centre where there is a great spheroidal enlargement is about 16,000 light-years. The thickness diminishes rapidly, and away from the centre the thickness is from 3,000 to 6,000 light-years. The centre of the system is in the direction towards the dense star clouds in Sagittarius at a distance of 30,000 light-years from the Sun. The Sun is moving around this centre with a velocity of 170 miles a second and the greater the distance of a star from the centre, the slower is its velocity in analogy with the movement of the planets about the Sun. About ten per cent. of the mass of the Galaxy comprises long period M-type variables, cluster-type variables, and other high-velocity stars and the globular clusters. This makes up the galactic system, which is merely one among millions of such systems that make up the Universe.

It appears that the Andromeda Nebula which is nearly 900,000 light years away is comparable in size with our Galaxy.

ROTATION OF THE GALAXY.

A hundred years ago the view was put forward by Madler, perhaps on insufficient evidence, that the Pleiades lies at the centre of the Milky Way and that all the stars of the system revolve round that group as centre. Such a movement was considered doubtful, but within the last ten years the Rotation of the Galaxy has been accepted as a subject for precise research, the data on which it is based being the radial velocities of stars determined by the spectroscopic (see p. 165), and the result as mentioned above.

STAR SPECTRA.

Most of the bright stars and many of the fainter have been examined with a spectroscopic, and have been divided into classes according to their type of spectrum, the spectral types being named by the letters O, B, A, F, G, K, M, N. This sequence is very closely correlated with the colours of the stars, and hence, doubtless, with their surface temperatures. The stars of the first two classes, O and B, have spectra characteristic of helium and hydrogen. Planetary nebulae, some stars known as Wolf-Rayet, in whose spectrum the chief lines are bright, and the bright stars of Orion generally are in this group. Stars whose spectra range between A and F—it is to be remarked that there is no rigorous line of division between the classes and that there are subclasses and spectra noted as "peculiar"—are white or blue stars, and in their spectra broad absorption lines of hydrogen are conspicuous. In the next groups—F to G, and G to K—lines characteristic of metals appear, fine but numerous, and the stars of this class are yellow. The spectrum of our Sun falls late in the group F to G. The characteristic of the spectra of the remaining classes, M (and N), is the existence of a considerable number of

fluting, and the stars are orange and red. Antares, Betelgeuse, and α Herculis are notable stars in sub-classes of this type.

GIANT AND DWARF STARS.

It was once believed that this spectral sequence indicated the age of a star, or position in an order that the stars passed through, but apart from any evolutionary interpretation the order B, A, F, G, K, M, is that of diminishing temperature; the supposed passage of a star down this sequence therefore signified that its surface continually cooled. It was discovered by tabulation that each of the "later" types, K and M, comprise two distinct classes of stars widely different in brightness. Since the spectrum is the same these M stars have the same surface luminosity and hence the difference of brightness can only be attributed to difference of size and the M stars consist of a group of huge diffuse "giants" and a group of small concentrated "dwarfs" with no M stars of intermediate size. The same is true in less degree of the K stars; as we go up the spectral sequence the giant and dwarf groups converge and they coalesce in types A and B. The stars put in order according to this scheme begin with the giant M stars which may be condensations of nebulae and then those of increased density in the sequence K, G, F, along the giant branch to A and B, and then come down the dwarf branch, radiating heat and contracting gradually to M dwarf stars.

This theory of evolution of the stars has, however, been abandoned because of some contradictions it implies, but the distinction between Giant and Dwarf stars remains, a large number of the naked-eye stars being of the former class because of their brilliance. Certain characteristic differences in the spectra of giant and dwarf stars have been found by which they can be readily distinguished and by an elaboration of the method it is found possible to determine the absolute magnitude of a star from examination of its spectrum and hence the parallax, the stars whose absolute brightness is already known being used to calibrate the scale.

THE SIZE OF THE STARS.

The angular diameters of large stars can be measured with an "interferometer," the active principle of which is the interference of light waves. If the distance of the star is known it is clear that its linear diameter can be deduced. The following are from recent measures at Mt. Wilson. Antares is given as 200 million, but the parallax of this star is less certain than that of some other stars.

α Herculis	346 million miles
Betelgeuse (average)	216 " "
α Ceti	97 " "
ϵ Pegasus	86 " "
γ Aquilae	43 " "
Aldebaran	34 " "
Arcturus	22 " "

ABSOLUTE MAGNITUDE.

This phrase implies the luminosity of a star irrespective of its distance. Actually it is the number that expresses, according to the usual system of stellar magnitude, the brightness of the star as it would be if it were at the distance of 10 parsecs (parallax 0".1). If the distance of a star is known, its absolute magnitude can be computed from its apparent, or, if the absolute and the apparent magnitudes are known, the distance of the star can be determined, the

numerical relation between M the absolute and m the apparent magnitude being

$$M = m + 5 + 5 \log_{10} \pi,$$

where π is the decimal fraction of a second of arc that indicates the parallax of the star. Considerably more than 200 stars are now known whose absolute magnitudes are 10 or fainter, and 12 which are even fainter than 15.

DISTANCE OF THE STARS.

The distance of the stars from us is so immense that its determination is a difficult problem, and it was not until nearly a century ago that there was any definite knowledge of the kind, and that was limited. The direct or trigonometric method of determination consists in measuring the minute difference of direction of the star as seen from different points in the Earth's orbit, which is now usually done by photographing the star and its surroundings at appropriate epochs and measuring the change in relative position. This is now a staple work at several observatories and making allowance for duplication there must now be considerably more than a thousand stars whose distances are known with some precision. A spectroscopic method of finding parallax through absolute magnitude has already been noted. A list of more than 4,000 stars, whose parallax has been determined in this way, has lately been published by the Mount Wilson Observatory.

The distance of a group of stars may be found from the mean parallactic movement (see *Stellar Motion*) of the group. The parallaxes of some binary stars have been found by a computational method assuming a value for their mass (hypothetical parallax).

For some distant objects a method is adopted depending on a peculiar property of a class of stars known as "Cepheid Variables". These stars show very regular fluctuations, coming to maximum at intervals which range from a few hours to several days, and it has been found that the length of this period has a relation to the mean absolute brightness of the star. The stars with longest period are intrinsically the brighter, and a definite law has been evolved connecting the two qualities. These Cepheid Variables are very common in globular star-clusters—the peculiarity was, in fact, first suggested by a number seen in the lesser Magellanic cloud—and by adopting this law it is clear that the great distances of such clusters may be surmised from a simple observation.

To express large distances a large unit is required. One is the space that light moves through in one year, which in miles is nearly 6 followed by 22 zeros; another unit is the *parsec*, or the distance at which the mean radius of the Earth's orbit would subtend an angle of $1''$ (parallax = one second). This is $3\frac{1}{3}$ times the light-year and in miles is rather more than 19 followed by 22 zeros.

STELLAR MOTION.

Many, if not all, of the so-called Fixed Stars are gradually changing their positions relative to one another, the movement of each star being called its Proper Motion. Consideration of these proper motions has led to the conclusion that they are in part due to actual movement in space of the stars themselves, but in part to the movement of our own Sun, which causes an apparent motion of the star in the opposite direction, this latter being called the star's parallactic motion. From this it has been found fairly conclusively, though there have been discordances in different determinations, that the

Sun, and with it the Earth and planets, is moving through space with a speed of 19.5 kilometres per second towards a point on the celestial sphere not far from the bright star Vega. The Proper Motions of Stars of spectral type F and G are found to be much larger on the whole than those of other types, and it is therefore to be supposed that these classes are nearest to us. These are facts of observation that have been known for many years past. These proper motions may be found to be consistent with theories of galactic rotation, or may support a theory advanced at the meeting of the British Association in 1905 that the stars are moving in space preferentially in one of two directions.

By an optical principle known as Doppler's, it is possible to find from its spectrum the rate at which a star is approaching or receding from us, and the "line of sight" or "radial" velocities of many stars have been found in this way.

NEW OR TEMPORARY STARS.

The phenomena known as Nova or Temporary Stars may be described as follows. A star, often of naked eye magnitude, sometimes a very bright one, appears suddenly in a place where no such object had been seen hitherto and remains visible without telescopic aid for some weeks or months, declining in brightness, with fluctuations, at first rapidly and then more slowly, and finally sinks to telescopic magnitude. It may be seen as such many years afterwards, when its light often shows traces of variability. It is generally found that the Nova appeared in the place of a faint star shown on a chart or in a star-catalogue that may have blazed into conflagration, but on the other hand the juxtaposition may be merely fortuitous. Novæ are not always of naked eye magnitude, for many are found by telescope, especially in the Milky Way and in extra-galactic nebulae, which supply data for some theories of the cosmos. Confining attention to bright Novæ the early rapid increase of brightness and subsequent spectroscopic observation appear to some to indicate an expanding shell of gaseous matter rather than to a sudden increase of temperature. From one hypothesis it follows that every star will be a Nova at some time during its history. A list of 13 bright Novæ that had appeared in the years 1848-1925 was given in the issue of this *Almanac* for 1926, and previous to that list Novæ had been seen in the years 1572, 1600, 1604 and 1670.

A class of Novæ that appear in extra-galactic nebulae are known as super-novæ of large absolute brightness, and from their study important conclusions are derived.

DOUBLE AND BINARY STARS.

The large majority of stars when looked at through a telescope appear as single points of light of different degrees of brightness and differing slightly in colour. Some, however, are seen to consist of two, or more, components which perhaps show a contrast in hue and whose relative position may be continually changing. The measurement of the relative position of these forms a branch of observational astronomy. Some double stars whose orbits show that they have gravitational connection are called Binary stars. The components of γ Virginis describe an orbit about one another in about 180 years. Other visual binaries with the magnitude of their components and periods are δ Equulei, 5.7, 5.6, 5.70 yrs.; κ Pegasi 4.8, 5.3, 11.35 yrs.; ϵ Centauri 0.3, 1.7, 78.8 yrs.; ζ Bootis 4.8, 6.8, 151 yrs.

TIMES OF MINIMA OF ALGOL (8 PERSEI) IN 1946

Jan.	Feb.	Mar.	April	July	Aug.	Sept.	Oct.	Nov.	Dec.
d h	d h	d h	d h	d h	d h	d h	d h	d h	d h

29 05	27 01	27 14	28 03	28 21	29 10	27 02	28 15	29 04	27 20
		30 10	30 23	31 18		29 23	31 12		30 17

These are approximate times of the middle of the period of diminished light.

SPECTROSCOPIC BINARIES.

A class of objects is revealed by the principle mentioned on p. 165, which affirms that certain peculiarities in a star's spectrum show the speed with which it is advancing towards, or receding from, the earth. As a result of this the spectrum of a binary star shows two distinct sets of lines, which oscillate about their mean position in a period equal to the period of the star. There are many stars of this kind with components so close together that they cannot be seen as two visually, but whose orbit may be determined from observations of their spectrum. Such stars are called Spectroscopic Binaries.

A famous star of this class is ϵ Aurigæ, a bright star near Capella, which had long been known as a variable star of small range and in 1904 was found to be a spectroscopic binary the variability being of the Algol character; that is to say it is caused by the eclipsing or partial eclipsing of one component by the other rotating around it. The period has been found to be 27.74 years, or perhaps 54.28 years, and the magnitude ranges from 3.3 to 4.1. Lately observations have shown an immense surrounding that would imply a size equivalent almost to that of our solar system.

VARIABLE STARS.

Although the stars generally shine with unchanging brightness, there are some among them which are exceptions to this rule, and of these Algol, the star β of the constellation Perseus, is the best known. In general this star is of about the second magnitude, but at regular intervals of something less than 69 hours it fades away to between third and fourth magnitude, taking rather more than 4½ hours to do so, and after a brief minimum regains its light. The approximate times when this star will be at minimum in the months when it is suitably placed for observation are given in the table on this page. Other bright stars whose light is said to show variation because of duplicity are, with magnitude at maximum and period: μ Scorpii 3.1, 1.45 days; σ Aquilæ 5.2, 1.95 days; 29 Canis Maj. 4.3, 4.39 days; γ Orionis 3.4, 7.99 days. The position of Algol is given by R.A. 3h. 47m., Declination 40° 44' N.

There are variable stars of types other than that of Algol. Mira Ceti (R.A. 2h. 16m., Declination 3° 15' S.) is known as a long period variable (331 days). Its magnitude at max. is between 2 and 5, and at min. 9 or 10, and its period shows considerable variability. There

is a class with few members that takes its name from the type Star R Coronæ Borealis, whose light is constant for a year or more, when it unexpectedly sinks. Not only the period but the minimum brightness is highly variable.

STAR CLUSTERS AND NEBULÆ.

Among the apparently solitary stars there are found groups of stars gathered close together, some of which may be easily separable into individuals, others that can only be separated by the most powerful telescopes, and objects that appear as unresolvable patches of light; the latter are called nebulae, and were aptly described by Herschel as "shining fluid."

There are nebulae called planetary that are small, regular in outline, and show a uniform disc. Analogous to these are some which are dark in the centre called annular or ring nebulae. Beyond this the spectroscopic divides the nebulae into two great classes. The first spectroscopic observation of a nebula, made by Huggins in 1864, showed a spectrum of one bright line only, which indicated that these bodies, or at least some of them, are constituted of glowing gas. Later investigation showed that the spectra of some nebulae are continuous, such as might arise from a cluster of stars. These are called "white" nebulae, in distinction to those with bright line spectra, which are "green" or gaseous. Photography supplies means of studying the number and form of nebulae in detail, and it is found that a large proportion of them are of spiral form. These are the extra-galactic nebulae, and it is estimated that two million of them may be seen with the 100 inch telescope at Mount Wilson. The gaseous green nebulae are in a small minority, and are generally diffused and irregular in outline and lie (as do the planetary nebulae) mostly in the Milky Way. Globular star clusters also lie outside the Milky Way, but irregular clusters are within its limits. There are also masses of dark nebulae in space which may be the earliest form of matter. The spiral nebulae have been much studied as to form and brightness, and with a certain system of classification the hypothesis is put forward that nebulae of the same class are approximately of the same size, and hence that their relative distances may be inferred. The farthest nebula that has been observed as yet is about 50 megaparsecs distant; its red shift indicates a retreat from us at the rate of 15,000 miles a second, nearly a tenth of the velocity of light.

THE Sun is one of the millions of stars that make up the Universe, and, so far as human knowledge goes, in magnitude and constitution is not unlike the stars of the night sky. It is surrounded by a family of smaller bodies of which our Earth is one, and the solar system, which is only a minute detail in the structure of the Universe, is the observing station from which we look out in all directions across the great distances which separate us from the other members of the stellar system.

The Solar or Planetary system consists of the Sun, with eight major planets, and minor planets or asteroids, that may be counted by thousands, circulating round it at varying distances in oval-shaped orbits. A moving object discovered in the year 1930 is said to be a ninth major planet (see Pluto, p. 171). Six of the major planets have smaller bodies circulating around them, so that each forms a separate system, but all the bodies receive their light and heat from the Sun.

The periodic comets which return to perihelion at regular intervals may be considered to be members of the Solar system, since they move in elongated elliptical orbits of which the Sun is at a focus. It is likely that their light is reflected sunlight, since they become brighter as they approach the Sun, but they seem to be partly visible by their own light.

The plane of the Ecliptic in which the Earth moves round the Sun is used as a fundamental plane of reference. The other planets move in planes inclined but little to the plane of the Ecliptic, at varying distances from the Sun, and describe orbits in periodic times which are connected with the distances by a certain relation known as Kepler's 3rd law. The squares of the periodic times vary as the cubes of the semi-major axes. Following are given brief notes on each of the bodies which make up the Solar system, with details of their sizes, distances from their primary, and periodic times in tabular form (pp. 168, 169). The time of rotation about its axis, or the length of the day of the planet, is added when this is known.

THE SUN.

The surface of the Sun, seen in a telescope, presents a mottled appearance formed by a darkish background on which small brilliant patches are scattered, the shape of these being such that they have been called alternatively rice-grains or willow leaves. On this surface, which is called the photosphere, black spots appear sporadically, and around them are brilliant streaks called faculae, that are conspicuous when the spots are near the edge of the Sun. Bright eruptions of hydrogen and dark streaks, generally called filiculi, can be seen in the central parts of the disc with a spectrohelioscope. There are also brilliant clouds of calcium vapour pervading the solar surface that are revealed by a device called a spectroheliograph, by which the whole of the Sun's disc may be photographed by the light of any element, and of that element only. Modern views describe the spots as columnar vortices which have a deep-seated origin far below the photosphere, and imply that a sunspot is a vast tornado in which electrified particles are rapidly whirled, and is proved by the presence of a magnetic field. The spots vary in size and number, and increase and decrease somewhat uniformly in both respects, passing through a maximum about every eleven years. They increase at a rather more rapid rate than they decrease. It is seldom that spots appear

in latitudes greater than 30° from the solar equator, but about the time of spot minimum or rather earlier small spots appear in that or even higher latitudes, and during the succeeding eleven years the spot regions converge towards the solar equator (*Sporer's Law of Zones*). At time of maximum the spots are largely in solar latitude 12° to 14° N. and S. The periodicity was first noted by Schwabe of Dessau, in the year 1843, from a comparatively few years' observations, but records of earlier years and a continuous and complete record made subsequently prove the existence of a period of average length of 11½ years from maximum to maximum, though there are large variations from this mean as shown by the table below. The prominences (p. 169a) also show a fluctuation in their activity in a period of the same length, and the form of the solar corona changes with the Sun-spot cycle in a most marked way. Not only this, but there are some terrestrial occurrences that vary in like phase with these solar, which seems to show convincingly a connection, or at any rate a relation, between Sun and Earth (see page 174). The Sun rotates on its axis in about 25½ days, which is shown by the movement of the spots across the visible disc, but because the Earth has moved in its orbit in that time the period of rotation with respect to the Earth, the Synodic period as it is called, is 27½ days, and a spot may therefore be on the visible disc for 13 or 14 days. These are approximate mean values, for the Sun does not rotate as a whole solid body, and the rate of rotation is not the same in all latitudes. A formula derived from the Greenwich record of spots during the period 1878-1923 gives for the time of sidereal rotation in different latitudes, either north or south:—

	d. h.		d. h.
Equator	25 1	Lat. 15°	25 8
Lat. 5°	25 2	" 20°	25 14
" 10°	25 5	" 30°	26 6

These figures refer to both hemispheres of the Sun. The addition of 2 days gives approximately the period of rotation with respect to the Earth. A formula for the daily rotation, derived from the long-lived spots in the cycle 1924-1934, $14^\circ.37 - 3^\circ.0 \sin^2(\text{lat.})$ is in approximate accordance with the above figures.

DATES OF SUN-SPOT MAXIMA AND MINIMA.

Maxima.		Minima.	
1805.2	1883.9	1810.6	1889.6
1816.4	1894.1	1823.3	1901.7
1829.9	1906.4	1833.9	1913.6
1837.2	1917.6	1843.5	1923.6
1848.1	1928.4	1856.0	1933.8
1860.1	1937.4	1867.2	1944.5
1870.6		1878.9	

The sunspot maximum of 1937-8 was the highest since 1870. The last minimum occurred in 1944, and activity is now rapidly increasing, the sunspots of 1945 being, as expected, mainly in latitude 20° - 35° . The average time from maximum to maximum in the above list is 11.0 years, and from minimum to maximum 4.5 years.

The surface of the Sun called the photosphere is surrounded by an envelope of glowing hydrogen, the chromosphere, more or less in a state of turbulence from which there are sporadic eruptions. Those on the edge of the Sun are called prominences and, if large, may be seen by naked eye when the Sun is totally eclipsed, or by means of a spectroscope at other times. These eruptions may be detected on the body of the disc with a spectrohelioscope and it

appears that they have a connection with terrestrial radio work. Statistical discussion is made between the occurrence of major eruption (*solar flares*) and sudden fadeings in long-distance short-wave transmission between which a clear relationship is shown.

An appendage of the Sun outside the chromosphere, called the Corona, can only be seen during total eclipses. The corona appears to vary in shape and extension according as the eclipse occurs at the period of maximum or minimum of Sun-spots, being at the latter time of a pronounced shape, with long streamers on either side known as the "wind-vane." At an eclipse when the spots are at maximum the corona is profuse all round the disc. Solar eclipses are total when seen from places on which the shadow of the Moon falls, and the Sun is seen only partially eclipsed from localities that are outside, but not far from, this path of totality, because the observer's position is outside the cone which envelops both Sun and Moon. There are more solar eclipses than lunar in the proportion of four to three taking the whole earth into account; for any given station the proportion is reversed.

MERCURY.

Mercury is the nearest planet to the Sun, and the smallest in the system. Because it moves in an orbit between the Sun and the Earth this planet can never be seen far from the Sun, but is always at a short distance to the West or to the East of that body. In the former case Mercury appears as a morning star and in the latter as an evening star. The extremes of these apparent excursions are known as Greatest Elongations, and their times and extent, measured by the angle included between the lines which join the Earth to the Sun and the planet respectively, are given on the first page of each month. The great ellipticity of the orbit of Mercury causes the amount of these Elongations to vary considerably, and they may be as small as 16° or as large as 28°. Elongations occur at intervals of about 116 days and the planet is to be seen as an evening star from about 10 days before Eastern elongations in the spring and as a morning star until 10 days after Western elongations in the autumn. There is at least one Eastern elongation in the first part of each year, and since three periods are equivalent to 348 days, these elongations happen about 27 days earlier in the calendar year by year. Mercury shows phases to the Earth, like the Moon in her first quarter if the elongation be in the East, and like her last quarter if in the

West. Mercury, like the Moon, shows no trace of an atmosphere.

VENUS.

Venus, which is nearly twice as far from the Sun as Mercury, its distance from the central body being rather more than two-thirds that of the Earth, is very nearly the same size as our globe. Her apparent movement with respect to the Sun is similar to that of Mercury, except that, being farther from the Sun, and nearer to the Earth than her smaller neighbour, the angles of Elongation exceed those of Mercury, and extend to 47°. Writing generally, it is believed that the planets rotate on axes as does the Earth, but this is not known to be the case for the interior planets Mercury and Venus, because of the difficulty in seeing any points or markings on their surfaces that may be considered permanent, though some are occasionally suspected by observers to persist. The rotation period of Venus has been found to be about 23 or 24 hours, or 24 days, or 225 days which is the period in which it completes its orbit round the Sun. With this divergence it can scarcely be said that any period is proved. Venus is covered by thick cloud and only the upper atmosphere above the cloud can be examined; its spectrum shows carbon dioxide but no oxygen, which seems to show that there is no vegetation of the terrestrial type on Venus, since earth vegetation performs the function of absorbing carbon dioxide from the atmosphere and returning the oxygen. This is in keeping with another line of speculation that the surface of Venus is entirely covered by ocean.

MARS.

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury and considerably smaller than Venus and the Earth. Details of its distance, size, and period will be found in the table. Mars is in opposition at intervals of about two years, because it moves at a rate not greatly different from that of the Earth.

Unlike Mercury and Venus, Mars exhibits many well-defined markings, which enable its rotation period to be well ascertained. There are white spots at the poles of rotation that appear to be snow, or some material that melts, since they dwindle, or even disappear in the Martian summers. It has been suggested, as a fact derived from observation, that this melting of the polar snows is quicker at the time of Sun-spot maximum than at minimum. The remainder of the surface of the disc is made up of dark bluish-grey areas that were at one time thought to be

water but are now regarded as regions covered with vegetation, and extensive areas of ruddy or orange hue, largely in the northern hemisphere, that may be of the nature of sand or rock. These markings may be considered permanent, though they suffer small changes apparently due to cloud formation above them, whilst there are changes in the intensity and colour of the dark areas such as would be produced by the growth and decline of vegetation consistent with the seasons (inferred geometrically) on the planet. There are markings of such dimensions that they may be properly called "canals," but certain fine, straight markings seen by some observers, but not by others, have received this name, which is certainly unfortunate, as it has been taken to imply that they are of manual construction, but for this there is no sufficient evidence or proof. The possibility of communication with Mars, which in some minds has been strengthened by the advent of wireless telegraphy, is fantastic.

A recent method of investigation is taken as showing that Mars has an atmosphere of considerable depth and obscuring power, sporadically cloud-bearing, and that the white polar spot is an atmospheric phenomenon. The two satellites of Mars, Phobos and Deimos, were discovered by Asaph Hall in 1877. The rotation period of Mars is approximately 24h. 37m.

THE MINOR PLANETS.

Moving in orbits, which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. Every year a considerable number of additions is made to the list, two hundred and eighteen having been discovered or announced in 1937. The orbits are determined as observations accrue, and a planet with an orbit is given a permanent number and perhaps a name; but until that is done it is known by letters according to a system. At present there are more than 1,500 on the permanent list, and perhaps a thousand that are awaiting further investigation. It has been recently estimated that there are about 44,000 minor planets within reach of present instruments. The four largest, found in the early years of the 19th century, are—Ceres, 485 miles; Pallas, 364 miles; Juno, 118 miles; and Vesta, 243 miles in diameter. Some of these

celestial bodies are perhaps nothing more than great masses of rock flying round the Sun.

The periodic times of their revolutions vary considerably, and an average may be taken as 1,600 days, or 4½ years. Some of the orbits are very oval, and the inclinations of their planes to the Ecliptic have considerably different values. The inclination of Pallas is 35°, whilst that of Juno is only 12°. As has been said, the orbits in general lie between those of Mars and Jupiter, but there are some that pass those limits. The planet Hidalgo has the longest period, 17½ years, and travels out as far as Saturn's orbit. It has the highest inclination, 43°, of any minor planet, but of one discovered in 1935 the inclination is 35°. Eros comes within the orbit of Mars, and may be in some circumstances within 13 or 14 million miles of the Earth. This happened in 1931, and the observations of the planet and surrounding stars then made are now under discussion to determine the Solar parallax, or the distance of the Sun from the Earth.

Three minor planets—Apollo, discovered in 1932, Adonis, discovered in 1936, and Hermes, discovered in 1937—come within the orbit of Venus.

JUPITER.

The next planet in order from the Sun, Jupiter, is the largest in the system, and has a diameter eleven times that of the Earth. Its density, however, is only ¼th that of the latter. On viewing Jupiter through a telescope it will be seen that the disc is not circular, but its form is an oblate spheroid, believed to be due to the rapid axial rotation, which causes a flattening at the poles and bulging outwards at the Equator. The same effect is produced on all the planets in more or less degree.

Jupiter has four principal satellites, which were the first celestial objects discovered by the telescope. Galileo, who observed them in January, 1610, is said to be the first, but Simon Marius has good claims to be considered an independent discoverer. It has also seven much fainter satellites, two of which, X and XI, were found in 1938 by Dr. Seth Nicholson, of Mount Wilson, on photographs taken with the 100-in. telescope. These faint satellites are quite beyond the reach of small telescopes. Satellite V was discovered visually with the 36-inch refractor at the Lick observatory by

Barnard in 1892. VI and VII were discovered by Perrine on photographs taken with the 3-ft. Crossley reflector at Lick in 1905. Satellite VIII was found by Melotte, at Greenwich, in 1908. IX by Nicholson, by means of the Crossley instrument at Lick, and now, as has been said, the same observer has found two satellites by help of a larger telescope. The inner two of the major satellites are each about as large as our Moon, the two outer about 50 per cent. larger.

The characteristic surface features of Jupiter are the bright zones separated by dark belts to both of which names are applied in analogy with the zones on the Earth. The central feature is the broad, bright Equatorial Zone, bisected by a narrow line known as the Equatorial Band. South of this zone follow in order the S. Eq. Belt, S. Tropical Zone, S. Temperate Belt, S. Temp. Zone, S.S. Temp. Belt, S.S. Temp. Zone, Polar regions, and similarly for the northern hemisphere of the planet. Examination by telescope shows detail and markings which, in many cases, are largely permanent. The best known of these is the Great Red Spot and its surroundings situated on the southern edge of the south Equatorial Belt. There are records of an observation of a spot by Hooke in 1664, which may have been an early appearance of this; on Nov. 27, 1827, the Rev. W. R. Dawes figured it in the form of an ellipse resting on the south equatorial belt of Jupiter and in 1878, its redness being very pronounced, the spot was brought under general observation. A bay or hollow in which this spot is set was noted by Schwabe in 1831, and is still generally seen, but in the year 1936 it faded with other S. Tropical features, leaving the Red Spot unusually prominent, as had happened in 1918-19 and 1826-27.

The rate of rotation of the planet is found by taking transits of spots or, in other words, by noting the exact times when markings are on the central meridian, and differences in the periods given by different markings is a matter of interest. In most latitudes of the planet the surface makes a complete rotation in about 9h. 55m., but for the equatorial region from 10° N. to 16° S. the rotation period is about 9h. 50m. Observations of different spots in a zone show differences of rotation time from the mean value for the zone, and it has been suggested that these abnormal values may in some cases be periodic, but the main fact of the equatorial current with respect to the body of the planet is very definite. Two systems are therefore used for defining the positions of markings on Jupiter. In System I, which pertains to the rapidly moving Equatorial Zone of the planet, the period of rotation is taken as 9h. 50m. 30s. System II, applies to the Temperate Zones, and in this the time of rotation is 9h. 55m. 40s. The rotation period of the Red Spot has been found by taking a mean over a long period to be 9h. 55m. 37s. A remarkable circulatory current in the South Tropical Zone, shown by the movement of spots, has been a feature of the observations by Phillips and others during the past few years.

SATURN.

The sixth major planet in order from the Sun is unique in appearance because of its encircling ring-system, which in general renders it magnificent as a spectacle and for special reasons at some times an interesting object for telescopic observation. The system consists of two bright rings and an inner dusky ring through which the

body of the planet can be seen. A marking on the outer ring known as Encke's division is sometimes seen, but it is doubtful whether this is a real separation. The rings appear to be flat annular discs of extreme thinness in the same plane which is inclined 28° to the plane of the Ecliptic. They probably consist of an immense number of minute bodies revolving like satellites round the body of the planet. Belts like those on Jupiter, but of not so pronounced a character, are seen on Saturn. Photographs of this planet, taken by ultraviolet light, show a wide dark belt near the equator which may or may not be an extension of the dusky ring. Saturn shows a bulging at equator, the ratio of the polar to the equatorial diameter being 13 $\frac{1}{4}$ to 15. An eccentricity of the ring with respect to the Ball has been suspected.

Saturn has ten satellites, situated outside the rings; some of the former are visible in telescopes of low power. Titan, the largest satellite in the solar system, is about one and a half times the size of our moon, whilst Iapetus is nearly the same size as our satellite.

Titan was discovered by Huyghens in 1655, Tethys, Dione, Rhea and Iapetus (see table p. 169) by J. D. Cassini towards the end of the 17th century. Sir Wm. Herschel discovered Mimas and Enceladus in 1789, and Hyperion was observed for the first time, almost simultaneously by Bond and Lassell, in September 1848. The most distant, Phœbe, which was first seen in 1898 (photographically by W. H. Pickering), moves in its orbit in retrograde direction like the two exterior satellites of Jupiter, VIII. and IX. Themis, which is called the tenth satellite, though it appears not to be the farthest from Saturn, has been observed once only since its discovery in 1900, and its reality is doubtful.

Saturn's equator rotates in about 10 $\frac{1}{2}$ hours. At rare occasions spots appear on this planet sufficiently definite for a rotation period to be determined from them. A spot that endured for some weeks in 1876 gave 10h. 14m. 24s., which is generally adopted. Another that appeared in 1933 also near Saturn's equator, supported this with only a small difference. From spots that have appeared away from the Equator, periods of about 10h. 40m. have been deduced, and it is suggested that there may be an equatorial current on Saturn as on Jupiter, but a more rapid one.

URANUS.

This planet, discovered by William Herschel at Bath in 1781, is only just visible to the naked eye. In a telescope Uranus is distinguished from the stars around by its disc, which is obvious though less than 4" in diameter, and by the quality of its light, which is less piercing than that of the stars. The two outer and brighter of its four satellites were discovered by Wm. Herschel in 1787; the two inner by Lassell in 1851. The names of the two inner satellites (see p. 166) are from Pope's "Rape of the Lock." A hundred years ago it was thought that Uranus had six satellites, neighbouring stars having been mistaken for attendants. All four move in a plane which is inclined 82° to the plane of the Ecliptic and in that plane they move retrograde, or in the opposite sense to the revolution of the planets round the Sun. If, however, the plane of their movement is regarded as inclined 98° to the plane of the Ecliptic, their revolution may be considered direct. It is

generally supposed that the plane in which the satellites move is that of the planet's Equator. A period of rotation has been determined by spectroscopic observation, its value being $10\frac{1}{2}$ hours, and the direction the same as that of the satellites.

NEPTUNE.

This planet is a telescopic object of about the 8th magnitude that was detected on September 23, 1846, by Prof. Galle of the Berlin Observatory, as the result of mathematical deduction by Couch Adams of Cambridge and Le Verrier of Paris from irregularities shown by the observed positions of Uranus. Its single satellite, which was discovered by Lassell in October of the same year, moves in a plane inclined 35° to the plane of the Ecliptic in a retrograde direction like the satellites of Uranus. A period of axial rotation of the planet of $7\frac{1}{2}$ hours has been inferred from variability of its light, and another of twice that length from spectroscopic observations, which is adopted.

PLUTO.

In the early months of 1930 a series of plates taken and examined at the Lowell Observatory showed a moving object that is considered by some to be a major planet, not far from the position which Percival Lowell had predicted for an extra-Neptunian body. Though reasons have been adduced to show that this body must be of the size and mass of Mars or the Earth, there is no proof that it is other than an abnormal minor planet.

THE MOON.

Neither Mercury nor Venus, so far as is known, has a satellite; the one satellite of the Earth is the Moon, which is quite familiar to us. The mean distance of the Moon from the Earth is about 239,000 miles—near enough for us to get a more complete knowledge of its surface conditions than we can of any other member of the Solar system. Only one side of the Moon is seen from the earth, but every region of the Moon is presented to the Sun in turn, and neglecting hypotheses as to the possible existence of a lunar atmosphere and its effects, it seems likely that there are rather remarkable changes of temperature: in the lunar day of half a month it must be heated to an extreme degree, and in the other half subjected to cold equal to that of interstellar space. Her diameter is rather more than 2,160 miles. Her rate of motion through the firmament is $13^\circ 10' 35''$ per day, which implies that she travels over a space slightly exceeding her own diameter in one hour. The average time from a New Moon to the next is 29d. 12h. 44m. 3s., but individual cases may range 6 hours and more on either side of this. When seen through a telescope the surface of the Moon presents many objects of great beauty and interest. A small instrument will show the chief "seas," plains, mountain ranges, ring-plains, and crater-pits. The question as to the origin of these formations, whether they may have been caused by volcanic action, or, on the other hand, by the impact of meteors, forms an interesting subject for discussion. It is believed that the Moon was at one time part of the Earth and became detached.

When the Earth passes between the Sun and Moon, the Earth's shadow sweeps across the Moon and causes a lunar eclipse, which may be either total or partial as in the case of solar eclipses. There is the difference that the phase

of a lunar eclipse is seen the same from all places where the Moon is above the horizon at the time. Solar eclipses can take place only at New Moon, and lunar eclipses only at Full Moon.

The Full Moon which occurs near the Autumnal Equinox rises at nearly the same time, about sunset, on several consecutive evenings. Because in earlier times it was thought that this was specially ordained to add to the length of daylight, and so facilitate the ingathering of the crops, the phenomenon was called the Harvest Moon. The Full Moon which follows this is called the Hunter's Moon.

A FEW OF THE CHIEF LUNAR FORMATIONS.

Apennines.—An extensive mountain range somewhat similar to terrestrial features. Visible to naked eye when projecting into the dark part of the disc. Length, 460 miles; highest summit (Huyghens) reaches 18,000 feet.

Aristarchus.—A lunar crater in N.E. quadrant. The brightest object on the Moon. This crater is visible as a luminous spot when all the surrounding region is involved in shadow.

Mare Crisum.—A dark grey oval plain visible to naked eye near W.N.W. limb of Moon. Extends 280 miles N. to S. and 354 miles E. to W. Well seen five days after new or a few days after full.

Mare Serenitatis.—Lies N. of the Moon's centre, and extends over 428 miles. A nearly circular dark plain. Contains a crater, Lüne, formerly suspected of change. This mare is visible to naked eye.

Tycho.—Towards S. limb. "The metropolitan crater of the Moon." A fine crater 54 miles in diameter and 16,600 feet deep. Central hill nearly a mile high. Tycho is the centre of a remarkable system of bright rays radiating from it that are very conspicuous at the time of full moon.

THE AURORA BOREALIS.

This phenomenon may be considered more terrestrial than celestial. It sometimes happens that an unusual luminosity is seen in the northern sky in the form of streamers, arches, and condensations. This has been regarded as showing the outer limit of our atmosphere, and its height determined by means of simultaneous photographs taken from two or more stations considerably separated. It is found that very few aurora are below 50 miles high, and above that level the number increases rapidly, the most frequent heights being about 63 and 66 miles. Above 66 miles the number diminishes, but some have been measured as high as 400 miles. It is suggested that the aurora is due to electrical discharge caused by charged particles shot into the earth's atmosphere from the Sun. An auroral display generally happens about the time of a terrestrial magnetic storm (see p. 174).

THE ZODIACAL LIGHT.

This is an appearance whose cause is not completely understood, to be seen only from places distant from towns and cities where the air is free from smoke and the darkness of the sky is not affected by the glare from artificial lights. At such places in northern latitudes it shows, when the moon is absent, as a cone of faint light stretching up slantingly in the direction of the ecliptic from the point of the horizon that is above the Sun, and therefore is

best seen before sunrise in the autumn months and after sunset in Spring because at those times that direction is inclined at a large angle to the horizon. From high elevations in the tropics it may be seen throughout the year. A distinction is sometimes made between this and the Zodiacal Band which is an even fainter phenomenon and is apparently a prolongation of the Zodiacal Light that extends entirely across the sky, and so forms a complete ring. There is at the point exactly opposite to the Sun a patch, a few degrees in diameter, of slightly brighter luminosity called the "Gegenschein" or "counter glow". The Zodiacal Light has been said to be a mere atmospheric effect, but this is inconsistent with some of the chief features of its appearance. It may be the manifestation of a widely scattered appendage of the Sun in the plane of the ecliptic, or, it has been suggested, it may be sunlight reflected from a vast concourse of meteoric systems. There is some slight evidence that it is more prominent at times of magnetic disturbance than at others.

METEORS.

Bodies of another kind, some but not all of which belong to the Solar system, are the meteoric streams, which give rise to occasional showers of meteors, falling stars, or fireballs, all of which are of the same class, the distinction being only one of size. They are visible in varying number on every night of the year, sometimes so abundant as to be quite spectacular, and it happens in some cases that on a particular date, or dates, meteors are seen radiating from the same part of the heavens in every year. This is explained by the fact that a stream of meteors, more or less dense, is moving in an orbit that intersects that of the earth, and the latter runs into the meteors on the date when it comes to the point of intersection. There is some reason to suppose that meteor swarms are in some cases gregarious that accompany comets, an illustration being supplied by a very profuse display of meteors on Oct. 9, 1933.

No.	Date.	Radiant Point. R. A. Dec.	Name of Shower.
1	January 2-4 ...	$23^{\circ}+5^{\circ}$	Quadrantids.
2	April 20-22	$27^{\circ}+33^{\circ}$	Lyrids.*
3	May 2-6	$33^{\circ}-1^{\circ}$	γ Aquarids.
4	June 27-30	$23^{\circ}+53^{\circ}$	Fons-Winnekeids.*
5	August 10-12	$46^{\circ}+57^{\circ}$	Perseids.
6	October 9	$26^{\circ}+55^{\circ}$	β Draconids.*
7	October 17-22	$52^{\circ}+25^{\circ}$	Orionids.
8	Nov. 15-16	$152^{\circ}+22^{\circ}$	Leonids.*
9	Dec. 11-14	$113^{\circ}+32^{\circ}$	Geminids.

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 70 miles at the beginning and about 48 miles at the end. The speeds vary from 20 to 45 miles per second, but occasionally these limits are passed. Fireballs, or very bright meteors, make their appearance at all times of the year unexpectedly, so that they are often imperfectly noted and computation of their flight is not practicable.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

COMETS.

Comets that revolve in elliptical orbits round the Sun as focus, and return to view at periodic intervals, may be considered members of the solar system. The periods that have been confirmed by returns range from $3\frac{1}{2}$ to nearly 80 years, whilst a few other computed orbits show periods as large as a million years. Other comets move in parabolic courses and apparently do not repeat their visits to the Sun.

Those that move in orbits in periods from $3\frac{1}{2}$ to 9 years are numerous. Their paths extend outward to the region of Jupiter's orbit, and they are hence called Jovian comets.

During the year 1944 one periodic comet, the return of which had been predicted, was detected, and three new comets were discovered. Comet Schuamasse, an orbit and an ephemeris for which were given in the *Handbook of the British Astronomical Association*, 1944, was observed from March 24 to 30 by Giclas at Flagstaff Observatory. Its distances from the earth and sun at the time of discovery were about 147 million miles and 195 million miles respectively, and its magnitude was 15.

Comet Vaisala (1944b) was discovered on April 18 by Vaisala. Its magnitude at the time of discovery was about 15 and as it did not make a close approach to the earth or the sun it never became a conspicuous object. Comet Dutoit was discovered by Dutoit on May 16, 1944, when its magnitude was 10. It was very far south at the time of discovery and was moving northwards, but when it became visible in these latitudes it was too far from the earth and sun to be an interesting object. Comet van Gent was discovered on May 23, 1944, by van Gent. It was a diffuse object at the time of discovery and its magnitude was 12. Its nearest approach to the sun was over 200 million miles and as its distance from the earth was considerably more than this, it did not become conspicuous.

A number of comets are due to return to perihelion in 1946 but only three of these are likely to be of any interest, some of them being behind, and some too close to the sun to be seen. Brooks (2) will pass perihelion on Aug. 26 and will then be 122 million miles from the earth and 175 million miles from the sun. This comet was last seen in 1939. Comet Schwassmann-Wachmann was last seen in 1930 and is due to return to perihelion on Sept. 24 when it will be 126 million miles from the earth and 95 million miles from the sun. Comet Giacobini-Zinner will pass perihelion on Sept. 18 and will be only about 27 million miles from the earth. It is possible that there will be a meteor shower from the debris of this comet about Oct. 9. Comet Tempel (2) passes perihelion on June 20 but it has not been seen since 1930 and it is doubtful if it will be seen at this return.

THE shape of our Earth is that of an oblate spheroid, or a solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles to these are circles. The length of the Polar axis, according to a recently accepted determination (Hayford) is 7,900.0 miles and the diameter of the Equatorial circle 7,926.7 miles. The suggestion has been made that the Equator is not an exact circle, but the supposed deviation from circularity was small, and the fact has not been proved. The mean density of the Earth is 5.5 times that of water. The Earth moves round the Sun in a plane which passes through the Sun's centre, or, to write with more precision, the centre of gravity of the Earth and Moon moves in this plane, and both revolve round the centre of gravity but not precisely in the plane. The plane is called the plane of the Ecliptic. The Earth's Equator is inclined to the Ecliptic at an angle of $23\frac{1}{2}^\circ$, and it is this tilt which causes the seasons. At certain times of the year the Sun is high above the Equator and, in mid-latitudes either north or south, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface and make it hotter. The periods of Summer and Winter are opposed in the two hemispheres, the time of Summer in the Northern coinciding with Winter in the Southern, and *vice versa*. In the region of the Equator the noon altitude of the Sun is large throughout the year, and there is little variation in the length of the day. Since the axis of the Earth is inclined always in the same direction, the line of intersection of the Equator with the Ecliptic moves parallel to itself as the Earth travels round the Sun (approximately). The instants when this line passes through the Sun are called the Equinoxes. The Sun and Earth are surrounded on all sides by the stars, and because the Earth moves round the Sun, the viewpoint changes its position relative to the sun and stars during the year, and different sets of stars are seen in the sky at midnight in Summer and Winter. The average velocity of the Earth in its orbit is $18\frac{1}{2}$ miles a second, and it moves more slowly in July than in January. It makes a complete rotation on its axis in about 23 hours 56 minutes of mean time, which is the sidereal day. Because of the movement of the Earth in its orbit the length of the rotation with respect to the Sun, or the solar day is more than this by about four minutes. It has been shown almost conclusively in recent years that the axis of rotation is not a fixed line in the Earth, but that its extremity, or the North Pole of the Earth, moves in a curve, roughly spiral, of diameter about 20 feet.

THE TIDES.

The Tides of the Ocean are rightly attributed to the attractive influence of the Moon on the Oceans, modified by a similar influence of the Sun, which is less in amount because of the much greater distance of the attracting body. If the Earth were a globe uniformly covered with water it would be possible to account for the observed phenomena and predict them by simple mathematical consideration of these attractive influences, but these are very greatly modified by the land formations of our globe, and the

prediction of the tides for any port depends mainly on the results of observation. A series of observed times and heights of the tide having been compiled and analysed, the analysis will show that the complete tidal movement can be represented by the combination of a series of periodic terms, and if these terms are each carried forward to some future date their recombination will give the predicted tide. Taking the mean sea-level as datum, writing generally, at any place high water occurs twice in every 24 hours, the average interval between tides being 12 hrs. $24\frac{1}{2}$ mins. High water is at its highest (springs) at or near New and Full Moon, whilst low water falls an equal amount below at those times. At or near the time of the first and last quarters of the Moon (neaps) the high water rises only about half as much above the mean level as it does at springs, and the low water falls about half as little below it. These extremes do not usually coincide exactly with the times of these phases of the Moon, but occur later, by an interval known as the *age* of the tide—thus, at London Bridge, the highest or spring tide occurs $2\frac{1}{2}$ days after New or Full Moon, and the neap tide is similarly delayed. The difference of height of spring and neap tides is the most apparent of the periodic differences which make up the whole tidal variation. Besides this there are differences due to the varying distance of the Moon from the Earth, and when the Moon is at or near perigee at New or Full the tide is specially high. There is a slight difference in the heights of the spring tide at New and Full Moon, and also in the height of the neap tide at the respective quarters, but these and other small periodicities are not appreciably noticeable at some ports. The mean level of the sea remains practically constant, but small changes have been detected that may be assigned to various causes.

TERRESTRIAL MAGNETISM.

The best known manifestation of this phenomenon is its effect on the needle of a mariner's compass, which, except for the variations to be immediately described, points continually northward. The north point indicated by a compass needle is not, except in particular cases, the north point shown by astronomical observations; in other words, the needle does not point to the North Pole of the axis of rotation of the Earth, but makes an angle with the terrestrial meridian. This angle is called the Magnetic Variation, or, more generally, Magnetic Declination, and differs in different parts of the world and even over limited tracts of country. Lines of equal magnetic declination run across the British Isles in directions approximately parallel to that of a line from Land's End to Edinburgh. Along a line joining Cambridge to Littlehampton, the declination (West) is approximately the same as at Abinger. At Dover it is now rather more than a degree less; from Newcastle to Plymouth it is nearly $1\frac{1}{2}^\circ$ greater, and along a slightly curved line from Killarney to the island of Lewis the west declination is 5° greater than at Abinger. There are two points on the globe to which the magnetic meridians and lines of equal declination converge, known as the Magnetic Poles. At these points a freely suspended magnetic needle would stand vertically. The position of the North Magnetic Pole

adopted in Admiralty Charts is lat. $70^{\circ} 40' N.$, long. $96^{\circ} 50' W.$, which differs nearly a degree in each element from the position found by Sir John Ross in 1831, and agrees more nearly with the position found by Amundsen in 1903-5. The position of the South Magnetic Pole found in 1840 was $73^{\circ} 30' S.$, $147^{\circ} 30' E.$ The position of the S. magnetic Pole determined by Mawson in 1914 was $71^{\circ} 10' S.$ lat., $150^{\circ} 45' E.$ long. The magnetic declination at any place changes gradually year by year, which was discovered by Gellibrand in 1634. Other ideas about declination were recognised among western nations by the end of the 15th century, Columbus being credited with the discovery. The Dip or inclination to the horizon was first noticed by Hartmann, of Nuremberg, in 1544, and was measured by Norman, of London, in 1576.

The information about magnetic declination and the other elements is known from observations made by officers of H.M. Navy and others in various parts of the world. A ship for H.M. survey service specially designed and prepared for this work was launched in 1939.

Magnetic Declination at London.

Year.		
1580	11	15 East.
1665	1	30 West.
1765	20	00 West.
1800	24	00 West.

In 1819 the westerly declination at Greenwich was about $24^{\circ} 25'$, which was probably its maximum. The needle at that place has been since moving slowly eastward, and in the year 1925 the declination (mean) was observed to be $13^{\circ} 10'$ west. The work of recording earth-magnetism was then transferred from the Royal Observatory, (Greenwich), to Abinger near Dorking in Surrey. The values of the elements there found are given in the following table:—

Year.	Dec.	H.F.	V.F.	Dip.
1925	$13^{\circ} 23' W.$	1860	4295	$66^{\circ} 35'$
1930	$12^{\circ} 25'$	1854	4292	$66^{\circ} 38'$
1935	$11^{\circ} 30'$	1853	4298	$66^{\circ} 41'$
1940	$10^{\circ} 43'$	1853	4310	$66^{\circ} 44'$
1941	$10^{\circ} 34'$	1854	4313	$66^{\circ} 44'$
1942	$10^{\circ} 25'$	1855	4315	$66^{\circ} 44'$
1943	$10^{\circ} 16'$	1856	4317	$66^{\circ} 44'$
1944	$10^{\circ} 08'$	1857	4319	$66^{\circ} 44'$
1945	$10^{\circ} 00'$	1858	4321	$66^{\circ} 44'$
1946	$9^{\circ} 51'$	1859	4322	$66^{\circ} 44'$

The values for 1945 are to be taken as provisional, and those for 1946 are inferred only. V.F. signifies vertical force.

The mean differences, Abinger minus Greenwich, for Dec., H.F. and Dip were found to be—

1925	+ $13'$	+ 0018	— $16'$
1931	+ $14'$	+ 0017	— $16'$

The daily movement in declination of the needle at Abinger is 2 or 3 per cent less in amount than that at Greenwich.

The declination varies during the 24 hours, for the needle makes a small excursion in the

morning from East to West, and returns, the range at Greenwich being about $12'$ in summer and $7'$ in winter. The needle occupies its mean position in the morning about $10h.$, and again about $12h.$, throughout the year. It reaches its most westerly position about $14h.$, and its most easterly position during the night or early morning at a time which varies during the year. The inclination or dip also varies in a similar manner to the declination. The amount of these changes of the magnetic elements is greater in summer than in winter. The daily range of declination is larger at times of spot maximum than at minimum, and markedly follows the progress of the solar cycle.

MAGNETIC STORMS.

Besides these diurnal movements and their periodic variations, the magnets recording the three elements sometimes make sudden and violent oscillations which may continue for several hours. Such an occurrence is known as a Magnetic Storm, and may be accompanied by spontaneous electric earth-currents, which, if violent, interfere with telegraph working, and is often synchronous with a manifestation of the Aurora Borealis. A suspected recurrence of magnetic storms after an interval of 27 days that would support the theory that they are caused by radial emanations from the Sun which strike the Earth is not conclusively proved, though there are many examples. There is frequently a large spot on the Sun contemporaneously with a storm, but, on the other hand, a storm sometimes occurs when no spot is visible, leading to the hypothesis of active areas on the Sun that may or may not be marked by a spot.

SUMMER TIME ABROAD.

The following list, which may not be complete, shows places that adopt a Summer Time. Variations of the Standard time are used and the dates of adoption are decided annually.

<i>British Empire:—</i>	<i>Sierra Leone.</i>
Australia (Part).	South Africa.
Bermuda.	Uganda.
British Honduras.	<i>Foreign Countries:—</i>
Canada (Part).	Argentina.
New Brunswick.	Belgium.
Nova Scotia.	Chile.
Ceylon.	Cuba.
Channel Islands.	Finland.
Cyprus.	France.
Falkland Islands.	Corsica.
Gibraltar.	French Guiana.
Gold Coast.	Germany.
Hong Kong.	Iceland.
India.	Netherlands.
Kenya.	Portugal.
Malta.	Azores.
New Zealand.	Spain.
Newfoundland.	Uruguay.
Labrador.	U.S.A.
Sarawak.	*U.S.S.R.

* Soviet Union adopted permanent Summer Time, one hour in advance of Standard Time (June 16, 1930).

IN the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used.

A classified list of places where zone systems have been adopted is given below. In the United States and Canada five standard times are used, these large territories being divided into zones approximately $7\frac{1}{2}^{\circ}$ on either side of five central meridians. For U.S.S.R., hourly zones from 3 hours to 13 hours fast have been adopted.

Fast on Greenwich Time.

- 12 hrs. F....Fiji, Gilbert and Ellice Is.
 11½ " F....New Zealand, Norfolk I., Nauru I.
 11 " F....New Caledonia, New Hebrides, Santa Cruz and Solomon Is.
 10½ " F....Lord Howe Island.
 10 " F....Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, New Guinea, Admiralty Is., Caroline Is. east of 148° E., Marshall Is.
 9½ " F....South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area).
 9 " F....Manchuria, Japan, Korea, Caroline Is. west of 148° E., Dutch New Guinea, Kei, Aru, Schouten Is., Sakhalin south of 50° N., Kuril Is., Formosa, Pescadores Is., Marianas Is.
 8 " F....Port Arthur, East China, Hong Kong, Philippine Is., British North Borneo, Labuan, Macao, Timor, West Australia, Celebes.
 7½ " F....Sarawak, Java, Dutch Borneo.
 7 " F....China (on the Yangtze Kiang from Chungking to Shazue), Fr. Indo-China, Ifanan I., Pakhoi, Thailand (Siam), S. Sumatra, Christmas I.

H. European.

- Portuguese East Africa, Sudan, S.W. Africa, Belgian Congo (East), Bechuanaland, Nyasaland.
 1 hr. F....Sweden, Norway, Denmark, Germany, Poland, Lithuania, Austria, Hungary, Switzerland, Italy, Czechoslovakia, Yugoslavia,

- Albania, Tunisia, Nigeria, Sardinia,
 Mid-European. Malta, Sicily, French Equatorial Africa, Cameroons, Belgian Congo (West), Portuguese West Africa (Angola), Libya, Danzig.
 Greenwich ...Great Britain, Ireland, Faroes, Channel Is., France, Belgium, Luxembourg, Spain, Portugal, Gibraltar, Monaco, Balearic Is., Corsica, Algeria, Morocco, Gambia, Sierra Leone, Ivory Coast, Gold Coast, Togoland, Dahomey, St. Thomas and Principe Is.

Slow on Greenwich Time.

- 1 hr. S....Iceland, Madeira, French and Portuguese Guinea, Senegal, Canary Is., Mauritania.
 2 hrs. S....Azores, Cape Verde Is., Fernando Noronha I., Trinidad Is. (Brazil), Scoresby Sound.
 3 " S....Greenland, Bermuda, Eastern Brazil.
 3½ " S....Uruguay, Labrador, Newfoundland.
 3¾ " S....British Guiana.
 4 " S....Canada east of 68° W., Nova Scotia, Prince Edward I., Porto Rico, Trinidad, Leeward Is., Guadalupe, Tobago, Martinique, St. Pierre, Barbados, Central Brazil, Argentina, French Guiana, Falkland Is., Paraguay.
 4½ hrs. S....Venezuela, Curaçao Island.
 5 " S....Canada from 68° to 90° W., Eastern States of U.S.A., Jamaica, Bahama Is., Cuba, Haiti, Peru, Panama, V. Brazil, Colombia, Cayman Is., Ecuador, Chile.
 6 hrs. S....Central parts of Canada and U.S.A., Central. Costa Rica, Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.
 7 hrs. S....Canada west of 102° W., Mountain States of U.S.A., part of Mexico.
 8 hrs. S....Alaska (south-east coast to and including Cross Sound, Douglas, Juneau, Kimsham Cove, Petersburg), British Columbia, California, Nevada, Oregon, Washington.
 Pacific. 9 hrs. S....Alaska (coast northward of Cross Sound to and including Prince William Sound), Yukon.
 10 " S....Alaska (Valdez, Seward, Anchorage, Fairbanks), Low Archipelago, Marquesas, Austral and Society Is.
 10½ " S....Hawaiian or Sandwich Is.
 11 " S....Alentian Is., west coast of Alaska (Nome), Samoa, Fanning I.

In the Tonga Islands the time 12h. 19m. 12s. fast and in Chatham Is. 12h. 15m. fast on Greenwich is used as the Date line is to the East of them. Calcutta is 5h. 53m. 20s. fast; Netherlands, 20m. fast.

THE DATE OR CALENDAR LINE.

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° S.	180°	15½° S.	172½° W.	53½° N.	170° E.
51½° S.	180°	5° S.	180°	65° N.	160° W.
45½° S.	172½° W.	48° N.	180°	76° N.	180°

* Summer Time is the "legal" time during the period in which its use is ordained.

TEMPERATURE AND RAINFALL RECORDS.

GENERAL: The maximum temperature on record of the air in shade is 134° Fahr., observed at Greenland Ranch, California, on July 10, 1913.

The wettest station in the world is generally allowed to be Cherra Poonjee in Assam, where the official annual average is 424 inches. In Aug. 1841, 264 inches was measured, when 30 inches or more fell on each of five successive days, while on June 14, 1876, a fall of 40.8 inches was measured.

BRITISH ISLANDS: The maximum temperature of the air recorded in the shade at 4 feet above the ground is 100° Fahr. This was observed at Wilton House, Salisbury, on July 15, 1881, and at Greenwich Observatory on Aug. 9, 1911.

The lowest temperature of the air recorded in the shade at 4 feet above the ground is

-23° Fahr., or 55° below freezing point, at Blackadder, Berwickshire, on Dec. 4, 1879.

The greatest rainfall in a day was at Bruton, Somerset, when 9.56 inches fell in the 24 hours ended 9 a.m., June 29, 1917. This rainfall is equal to 965 tons of water per acre.

The total rainfall for a year at Stations in the British Islands during the 66 years 1870 to 1935 ranged from 246.92 inches at Llyn Llydaw (Copper Mill), Carnarvon, and 247.30 inches at the Styx, Cumberland, in 1923, to 9.29 inches at Margate in 1921.

The maximum wind-velocity on record in the British Isles was recorded at Scilly on December 6, 1929, when a gust reached the rate of 111 miles per hour.

Chronological Notes

THE AGE OF THE EARTH.

In the view of science and from the assumption that its heat is sustained solely by contraction of its bulk, Lord Kelvin deduced 20,000,000 years as the time that the Sun has existed, but this is too short to be accepted by geologists whose researches require a considerably longer time for the formation of terrestrial strata. The age of the Earth has been deduced astronomically from the eccentricity of Mercury's orbit, and from the tidal theory of the origin of the Moon, geologically by various methods, and, since the discovery of radio-activity, from the ratio of the quantities of lead and of radioactive elements in rocks in the Earth's surface, which are held to result from the transmutation of uranium. All the evidence is more or less consistent with the conclusion that the Earth has existed as a planet for a period between 1,500 and 3,000 million years.

GEOLOGICAL PERIODS.

- I. AZOIC ("Without Life"), containing no trace of life in any form. The duration of this period probably far exceeded that of all the remaining divisions together.
- II. Eozoic ("Dawn of Life"), characterized by the first appearance of animal life.
- III. Palæozoic ("Old Life") or PRIMARY, containing traces of extinct animal life:—
 - i. Cambrian, exemplified in Wales (Cambria), Cumberland, &c.—the earliest group which possesses a connected suite of fossils.
 - ii. Ordovician, exemplified in North Wales and named after the ancient British tribe (Ordovices) inhabiting the region.
 - iii. Silurian, named after the ancient British inhabitants (Silures) of S.E. Wales.
 - iv. Devonian or Old Red Sandstone, from the prevalence of the system as a marine formation in Devonshire.
 - v. Carboniferous, including Coal Measures, Millstone Grit and Mountain Limestone.
 - vi. Permian, from the Russian province of Perm, where these strata are widespread.
- IV. Mesozoic ("Middle Life") or SECONDARY, with intermediate forms of animal life:—
 - i. Triassic, from the three (tri-) divisions of the type formation in Germany.
 - ii. Jurassic, typically displayed in the Jura Mountains.
 - iii. Cretaceous, from the chalky nature of its representatives where first studied.
- V. Cainozoic ("New Life") or TERTIARY, containing forms of existing life:—
 - i. Eocene, the dawn or beginning of new forms of life, i.e., existing species.
 - ii. Oligocene, containing a few still existing species.
 - iii. Miocene, containing a minority of existing species—less than 50 per cent.
 - iv. Pliocene, the fossil remains show a majority of still existing species.
- VI. QUATERNARY ("Fourth in Order"):—
 - i. Pleistocene or Glacial, the greatest number of the remains are those of still existing species. Period of last Great Ice Age.
 - ii. Recent or Post-Glacial.

Definite dates cannot be assigned to most periods, but G. de Geer has shown that scarcely 9,000 years ago the site of Stockholm was beneath the ice-sheet (VI. i.).

THE ANTIQUITY OF MAN.

Pithecanthropus erectus (Erect Ape-man).—Remains of a skull and of a thigh bone were found in 1891 and 1892 by Professor Dubois, at Trinil, Java. These are held to be remains of a creature of Pleistocene times (see Geological Period, col. i.), about midway between the Orangutan and Man in development.

Sinanthropus pekinensis (Peking Man).—A skull found at Choukoutien, 40 miles S.W. of Peking, China (Dec. 2, 1929), is ascribed to the same period as the Java type, but the brain development is greater than the Trinil skull and the brain case much thinner than that of the Pittedown skull.

Australopithecus Africanus (Erect Man-ape).—A skull was discovered in a limestone deposit at Taungs (Western Cape Colony), in 1925, by Professors Dart and Young of Witwatersrand University. In connexion with this discovery, Sir A. Keith, F.R.S., has declared that traces of human life may yet be discovered in Miocene times (see col. i., V. iii.).

Homo Heidelbergensis (The Heidelberg Man).—A lower jaw was discovered near Mauer, Heidelberg, in 1907. This is held to be that of a primitive man of the Pleistocene Period.

The Pittedown Skull (Eo anthropos, or Primitive Man).—Discovered in 1912 at Pittedown, Sussex, and ascribed to primitive man of early Paleolithic times.

Neanderthal Man.—Remains of a skull and parts of a skeleton found in 1859 in the Neanderthal Ravine, near Düsseldorf, Rhenish Prussia, and others found at Spy, Belgium, in 1884, are held to represent the oldest known dolichocephalic (long-headed) race in Europe, living about 50,000 years before the Christian Era. In 1925 a similar skull was found near Tabgha, Palestine. In 1938 Prof. Okladnikov discovered in a grotto in the Hissar mountains of Uzbekistan the skeleton of a child of Neanderthaloid type, the only relic of the kind yet found in Central Asia.

Homo Primigenius.—Discoveries of interred human remains at Combe Capelle, Dordogne, France (1909), at Brux and Brunn, Moravia, and at Galley Hill, Northfleet, Kent (1895), are held to be those of human beings of late Paleolithic times, from 35,000 to 25,000 B.C.

STAGES OF CIVILIZATION.

The terms employed by ethnologists refer to periods, not of time, but of culture, and are of local application only, there being no universal synchronous sequence in all parts of the world. Races of Europe, Asia and America had reached the Iron Age of development long before the 18th century, A.D., while races in Oceania were still in the Paleolithic (or at least Neolithic) stage at the time of Cook's voyages.

The Stone Age.—The ancestors of primitive man are held to have adopted the use of stones of a suitable size for defence, while primitive man made such instruments more effective by sharpening them to a rough edge. The earliest period is known as *Eolithic* (or Dawn of the Stone Age), and this

period may have extended to 600,000 years B.C. Weapons of a later period, known as *Paleolithic* (or Old Stone Age), show gradual developments, from the chipped, leaf-shape forms, known as *Chellean* (from Chelles, Seine et Marne, France), and employed, perhaps, from 400,000 to 100,000 B.C., to later and more effective flint points, arrow-heads and spear-heads, flat on one side, known as *Mousterian* (from Le Moustier, where many such implements and other remains were found). The Mousterian period is held to have lasted until about 10,000 B.C., when *Neolithic* (or New Stone Age) weapons, polished and less crudely fashioned, were brought into use for a further period of about 5000 years. In the Stone Age the burial of the dead was influenced by the primitive nature of the implements available for digging, the graves being only large enough to contain a body huddled together in a cramped position.

Cultivation of the Soil.—Cultivation is believed to have followed the interment of the dead about 10,000 B.C., and rendered possible the political (*pols* = city) organisation of mankind. There appears to have been a definite centre of Western civilization at *Nippur* (and elsewhere in Iraq) no later than 6000 B.C., and in *Egypt*, under the first of the Pharaohs (Menes), about 5000 B.C. It is not yet known if a similar degree of Eastern civilization had been reached in China, or elsewhere, during (or before) that of Iraq and Egypt.

The Bronze Age.—Intercommunication of races introduced a knowledge of the malleable properties of copper, while the spread of commerce distributed tin from Saxony and Cornwall among the races of Europe and Asia. Implements and utensils of cast bronze superseded those of stone, wood, horn or bone. The designs and decorations suggest that this stage of culture was introduced into Europe from Asia, and it must therefore be dated for the East far earlier than for the West, over a period ranging from 5000 to 2000 B.C. The Bronze Age appears to have been marked by the cremation of human remains, in place of mere burial in a constricted position.

The Iron Age.—Implements of cast bronze were in turn superseded by those of hammered iron at varying dates—in China, (Chaldea, Assyria and Egypt about 4000 B.C.; in South-Eastern Europe about 2000 B.C., spreading over the rest of Europe from 1000 B.C. to A.D. 200, by which time the use of hammered iron was known throughout Scandinavia and in Ireland. It is possible that the Eastern civilization discarded the use of bronze and adopted that of iron even before the West had reached the Bronze Age, and while the remoter parts were still in the Palaeolithic Age. With the Iron Age was re-introduced interment of human remains, in place of Bronze Age cremation, but the bodies were laid at full length in the ground and not huddled up as in the Stone Age.

THE ROMAN CALENDAR.

Present Days of the Month.	March, May, July, of October have thirty-one days.	January, August, December have thirty-one days.	April, June, September, November have thirty days.	February has twenty-eight days, and in Leap Year twenty-nine.

MEASUREMENTS OF TIME.

Measurements of Time.—These are based on the times taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw = God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig = wife of Odin); and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnius).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The *Year*.—The *Equinoctial* or *Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, of 365 $\frac{1}{4}$ 2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The *Historical Year*.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal year began on March 25, whilst the Historical Year began on January 1. Thus the Civil or Legal date 1688 March 24, was the same day as 1689 March 24 Historical; and a date in that portion of the year is written as: March 24 1688, the lower figure showing the historical year.

Regnal Years.—These are the years of a king's reign, and each begins on the anniversary of his accession: e.g. Regnal year 20 of the present King began on Dec. 11, 1945. The system is used for dating Acts of Parliament. The *Summer Time Act of 1925*, for example, is quoted as 15 and 16 Geo. V. ch. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII. began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 20 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 20 Edw. VII. and 1 Geo. V.; similarly, Acts passed in 1936 were dated 1 Edw. VIII. and 1 Geo. VI.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of the Annunciation of the Blessed Virgin (Lady Day) on the 25th March, and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1751. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from Mar. 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The *Longest Day*.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365 $\frac{1}{4}$ days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in leap year brings it back a day in the Calendar, and at the present time two of the four years in the leap year cycle have the longest day on June 21, two on June 22.

Because of the 11 minutes above mentioned the additional day in leap year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses, being about 18 hours too soon at the end of the hundred years.

To remedy this the last year of a century is in most cases not a leap year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a leap year.

Some special cases that follow from these general principles may be noted. In 1897 the Solstice happened at 4 o'clock in the morning of June 21 by Greenwich time. Hence by California local time it would have been on June 20, which would have been the longest day in that place. In 1903 the time of the Solstice was 2 o'clock in the afternoon of June 22, so that in distant eastern longitudes the longest day would have been June 23.

The *Shortest Day*.—Similar considerations apply to the shortest day of the year, or the day

of the Winter Solstice. At the present time this is Dec. 22 in every year (Greenwich date), but later in the century in some years it will be Dec. 21. The difference due to locality also prevails in the same sense as for the longest day. In the year 1935, for example, the Solstice fell on Dec. 23 by local time of a place in distant eastern longitude, whereas in the year 1937 it occurred on Dec. 21, by the time of a place more than 6 hours of longitude west of Greenwich.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Metonic (Lunar, or Minor) Cycle.—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly, equal in duration to 19 Solar Years, and hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in *figures of gold* on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction ($28 \times 19 \times 15$). The Julian Day begins at noon.

Roman Indiction.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epact.—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

Lord Mayor's Day.—The date Nov. 9 is in accordance with Act of Parliament (24 Geo. II. c. 48). In the earliest times the Lord Mayor was elected on the day of the Feast of St. Simon and St. Jude, Oct. 28, and from the time of Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was finally fixed for Michaelmas Day in 1546, as it

now is, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28.

THE SEASONS.

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (i.e. about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the longest day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the months of May, June and July, Midsummer Day being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (i.e. about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of August, September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*, Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (i.e. about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain* the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE ROMAN CALENDAR.

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C.,

and the ordinal number of the year in Roman reckoning is followed by the letters A.U.C. (*Anno Urbis Condite*), so that the year A.D. 1946 is MMDXCVI (2699) A.U.C. The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Cæsar, who was then Pontifex Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore asked the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days before the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the Table on p. 178. The year containing 366 days was called *bisextilis unus*, as it had a doubled sixth day (*bissexatus dies*) before the March Kalends on Feb. 24—*ante diem sextum Kal. Mart.*, or VI Kal. Mart.

THE CHRISTIAN CALENDAR.

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Annus Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4744th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were leap years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nice, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be

a leap year (*see* p. 179). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583; Poland 1585, Hungary 1587, the German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700–1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Roumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Roumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles was 11 days after 1700, 12 days after 1800, and has been 13 days since 1900. It should be added that the word *style* actually connotes the date of the beginning of the year. It happened that a change of the latter from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but nevertheless expressive.

The Dominical Letter is one of the letters A–G which are used to denote the Sundays (Lord's Day) in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1–Feb. 29, the second from March 1–Dec. 31.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term, *Quadragesima*, meaning the "Forty days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by the best modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Easter-Day is the first Sunday after the full moon which happens upon, or next after the 21st day of March; and if the full moon happens upon a Sunday, Easter-day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have

A TABLE OF EASTER DAYS AND SUNDAY LETTERS ;

1955.....	Feb. 23	April 10	May 19	May 29	xxvi	Nov. 27

NOTES CONCERNING TABLE OF MOVABLE FEASTS.

Ash Wednesday (first Day in *Lent*) can fall at earliest on February 4 and at latest on March 10.

Easter Day can fall at earliest on March 22 and at latest on April 25.

Ascension Day can fall at earliest on April 30 and at latest on June 3.

Whit Sunday can fall at earliest on May 10 and at latest on June 13.

Trinity Sunday is the Sunday next before *Holy Thursday* (Ascension Day).

Trinity Sunday is the Sunday next after *Whit Sunday*.

Corpus Christi falls on the Thursday next after *Trinity Sunday*.

There are not less than xxii and not more than xxvii *Sundays after Trinity*.

Advent Sunday is the Sunday nearest to November 30.

been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon. (*Paschal Full Moon.*)

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days (March 22–April 25). On June 15, 1928, the House of Commons agreed to a motion for third reading of the Bill that Easter Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years be the first Sunday after the second Saturday in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. In consequence of lack of support, there is no present prospect of the adoption of a Fixed Easter.

Rogation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. Because of the processions and the crosses borne in them the period was called in England Gang-days and Cross-week. According to the laws of King Alfred a theft committed on these days was considered as heinous as one committed on a Sunday or Holy-day. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the first Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly-baptised, Whitsuntide and Easter being the two great seasons for the sacrament of baptism in the early church. But though this is generally accepted as the origin of the name, it has been disputed and other derivations have been suggested. An early writer says: "This day is called Wyte Sondag because the Holy Ghost brought Wytte and Wisdom unto Christ's disciples, and filled them full of ghostly wit." And other passages are to be found that support this as the derivation. The suggestion that the word Whitsun is an aural corruption of Pfingsten, which is the German word for Pentecost, seems more improbable than one recently made that the name is the equivalent of the Welsh word Wyth, meaning eight, or the French huit, because from Easter to Whit Sunday, inclusive of both, there are eight Sundays. It has been urged in objection to the "white" theory that the word used in the primitive church (*Albus*) does not resemble "white," but, on the authority of the "New Dictionary," *Ilwitan* Sunnandacy, and White-sund dci, were early British forms. In the early Roman usage, the Sunday after Easter was called *Dominica in Albis*, and it has been suggested that, perhaps because of the colder weather, this was transferred to Pentecost.

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Advent Sunday is the nearest Sunday to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22–26 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (see *Fixed Easter*), there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the 25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or on April 14, the year being a leap year.

THE JEWISH CALENDAR.

Origin.—After the Dispersion Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II, a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (*Circ. 120 B.C.*), which differ little from those adopted at the present day. The year 5706 (1945–1946 A.D.) is the 6th year of the 303rd *Metonic* (Minor or Lunar) Cycle of 19 years and the 22nd year of the 204th *Solar* (or Major) Cycle of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned as 29 days, 12 hours, 793 *minims*. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Iyar), the years when this happens being called *Embolismic*. Of the 19 years that form a *Metonic* cycle, 7 are *embolismic*; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astro-

nomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two, for reasons depending on circumstances such as those to be immediately stated. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types:—

	Days
Common Deficient having	353
Common Regular having	354
Common Abundant having	355
Embolismic Deficient having	383
Embolismic Regular having	384
Embolismic Abundant having	385

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether

Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29: in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in common years and Adar II., or Ve-Adar, in embolismic, always has 30 days, but neither this, nor the other variations mentioned, are allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion. Some minor but important points may be mentioned.

The time used is that of the meridian of Jerusalem, which is 2h. 21m. in advance of Greenwich time.

The Jewish day begins at Sunset, which for computations of the Calendar is assumed to begin at 6 p.m. by time of Jerusalem.

In a month that follows one of 30 days, the day preceding its first day is also observed as the day of New Moon, the reason for this being somewhat obscure.

JEWISH CALENDARS 5706-5708

Jewish Month	A.M. 5706	A.M. 5707	A.M. 5708

JEWISH FASTS AND FESTIVALS.

<i>Tishri</i>	1	Rosh Hoshanah (New Year).
"	2	(2nd day).
"	3	*Fast of Gedaliah.
"	10	Yom Kippur (Day of Atonement).
"	15-21	Succoth (Feast of Tabernacles).
"	21	Hoshana Rabba.
"	22	Solemn Assembly.
"	23	Rejoicing of the Law.
<i>Kislev</i>	25	Dedication of the Temple.
<i>Tebet</i>	10	Fast of Tebet.
<i>Adar</i>	13	*Fast of Esther.
"	14	Purim.
"	15	Shushan Purim.
<i>Nisan</i>	15-22	Passover.

Sivan 6 and 7 Shavuot (Pentecost or Feast of Weeks).
Tammuz 17 *Fast of Tammuz.
Ab 9 *Fast of Ab.

A.M. 5706 is an Embolismic Deficient year and contains 383 days.

A.M. 5707 is a Common Regular year and contains 354 days.

A.M. 5708 is an Embolismic Abundant year and contains 385 days.

NOTES.—If these dates fall on the Sabbath the Fast is kept on the following day.
 § This Fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on a Sabbath.

THE MUHAMMADAN CALENDAR

The epoch of the Muhammadan Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is July 15, A.D. 622 in the Gregorian Calendar. *Hejira* years are used principally in Turkey, Persia, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the *Hejira*. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the *Hejira* year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a *Hejira* year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle. If the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

Hejira year 1365 gives a quotient of 45 and a remainder of 15, thus making it a common year of 354 days; A.H. 1366, with remainder 16, is *kabishah* (355 days).

HEJIRA YEARS 1365 AND 1366

Name and Length of Month	A.H. 1365	A.H. 1366
Muharram (30)...	1945 Dec. 6	1946 Nov. 25
Saphar (29)....	1946 Jan. 5	Dec. 25

Dulkaada (30)...	Sept. 27	Sept. 16
Dulheggia (29 or 30).....	Oct. 27	Oct. 16

NOTE—A.H. 1367 (a common year of 354 days) begins November 15, 1947.

OTHER EPOCHS AND CALENDARS.

Chinese.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the

European or Western system, is compiled by the Academia Sinica at Nanking. It is believed, however, that the old Lunar Calendar is still in use to some extent. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet.

Coptic.—In the Coptic Calendar, which is used by part of the population of Egypt and Abyssinia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap-year, and in these years there are 6 complementary days. The Intercalary year of the Coptic Calendar immediately precedes the Leap-year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Hindu.—In addition to the Muhammadan reckoning there are six eras used in India. The principal astronomical system was the *Kali-yuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1946 is, therefore, the year 2003 of the *Vikrama Era*. In Southern India, the *Saka Era*, with its epoch of March 3, A.D. 78, was probably founded by Kanishka (whose sway was widely extended), and is in general use. The year A.D. 1946 is 1868 of the *Saka Era*. In the Hills, the *Saptarshi Era* dates from the moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being not unlike the British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji from 1868 Oct. 13 to 1912 July 31

 " Taishō " 1912 Aug. 1 to 1926 Dec. 25

 " Shōwa " 1926 Dec. 26

Hence the year Shōwa 21 begins 1946 Jan. 1. The months are not named. They are known as First Month, Second Month, &c., first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kwayōbi (Fire-day), Suibiyōbi (Water-day), Mokuyōbi (Wood-day), Kin'yōbi (Metal-day), Doyōbi (Earth-day).

Iranian.—The chronology of Persia, which is still followed by the Parsees of India, dates from the accession of Yazdegerd III. to the throne on June 10, A.D. 632.

The World

THE *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901.8 English miles, divided into 360 Degrees of Longitude, each of 69.17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901.8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365 days 6 hours 9 minutes). The Earth is distant from the Sun 93,005,000 miles.

AREA AND POPULATION.

Continent, &c.	Area in Square Miles.	Estimated Population (1940).
Europe	2,085,000	403,000,000
Asia	10,348,000	1,155,000,000
U.S.S.R.	8,337,000	172,000,000
Africa	11,699,000	158,000,000
North America... ..	8,350,000	163,000,000
Central do. and Islands ..	308,000	22,000,000
South America ...	7,047,000	90,000,000
Oceania	3,201,000	11,000,000
World.	51,375,000	2,174,000,000

The British Dominions extend over the largest area (14,000,000 sq. miles); the U.S.S.R. is second (8,377,000 sq. miles); France (in 1939) was third, with 4,336,000 sq. miles; the United States, with its Insular Jurisdiction, &c., covers 3,750,000 sq. miles; Brazil 3,220,000 sq. miles, and China 3,000,000 sq. miles.

WORLD POPULATION.

A. A. Berle, Assistant Secretary of State, U.S.A., stated at Durham, N. Carolina (Feb. 7, 1944), that the relative strength of the countries of the World would change most strikingly in the next 25 years. His predictions (in tabular form) are:—

Country.	Pop. 1940.	Pop. 1965.
U.S.A.	135,000,000	155,000,000
U.K.	46,000,000	42,000,000
Germany	69,000,000	64,000,000
France	41,000,000	37,000,000
U.S.S.R.	175,000,000	222,000,000
Brazil	41,500,000	60,000,000

THE CONTINENTS.

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 72° 12' N., to Cape Matapan, in the south of Greece, 36° 23' N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

The population of Europe has been estimated by Dr. R. R. Kuczynski at 100,000,000 in 1600; 152,500,000 in 1700; 173,000,000 in 1789; and at 525,000,000 in 1934.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30' N.) and Cape Buru (90 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe. Its extreme longitudes are 17° W. at Cape Verde and 51° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of Central America, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 22½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1½ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

ASIA.

The expressions "The Near East," "The Middle East" and "The Far East" often appear in the Press of English-speaking countries, but have no definite boundaries. A correspondent to *The Times* (June 27, 1945) suggests the following limits:—*Near East* (Turkey to Persia) 25°–60° E. long., *Middle East* (Baluchistan to Burma) 60°–100° E. long., *Far East* (Siam to Japan) 100°–160° E. long.

DISTANCE OF THE HORIZON.

THE limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of 20 feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

At a height of	the range is	At a height of	the range is	At a height of	the range is
5 ft.	2'9 miles.	500 ft.	29'5 miles.	4,000 ft.	83'3 miles.
20 „	5'9 „	1,000 „	41'6 „	5,000 „	93'1 „

LONDON WITHIN VARIOUS BOUNDARIES.

	AREA IN STATUTE ACRES.	POPULATION.	
		1921.	1931.
City of London	677	13,709	10,999
Administrative (County of London)	74,850	4,484,523	4,397,003
Central Criminal Court District	268,356
Metropolitan Police District (not including City)	442,778	7,466,492	8,192,943
Metropolitan and City Police Districts	443,455	7,480,201	8,203,942
Greater London	443,455	7,480,201	8,203,942

Boundaries.—The *Administrative County of London* includes the whole of the *Metropolitan Parliamentary Division*. It also comprises the City of London and the 28 Metropolitan Boroughs. The *Metropolitan Police District* comprises the County of London (excluding the City of London), the county of Middlesex, and parts of the counties of Surrey, Hertford, Essex and Kent. The boundary is irregular, but most of the District falls within a radius of 15 miles from Charing Cross.

* White Population only.

Payments are made to parents by certain countries for each child born and brought up. Australia was the pioneer country with a Maternity Act passed October 12, 1912, under which a grant is made to parents whose income does not exceed £247 per annum (£4 10s. per week), increasing by £13 for each additional child, but with an income limit of £338 (£6 10s. per week). In Great Britain a payment of £13 per annum for each child after the first provided by the Family Allowances Act, 1945, with an extended provision, free of cost, of school meals and milk services. In U.S.S.R. a bonus of 200 Roubles is given to a mother on the birth of her 7th, 8th, 9th and 10th child, and of 5,000 Roubles on the birth of the 11th child.

OCEAN AREAS AND DEPTHS.

The greatest known Ocean Depth (in the Pacific, off Mindanao, 35,410 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Name.	Oceans. Area of Basin (sq. miles).	Greatest Depth (feet).
Pacific	63,986,000	Off Mindanao, 35,410
Atlantic	31,530,000	Porto Rico Trench, 27,962
Indian	28,350,000	Sunda Trench, 22,968
Arctic	5,541,600	(1939), 16,634
	<i>Seas.</i>	
Malay	3,137,000	Kei Trench, 21,342

CHARTER OF THE UNITED NATIONS.

The foundations of the Charter of the United Nations were laid at the Conference of Foreign Secretaries at Moscow in 1943, and upon those foundations a structure was built at the meetings at Dumbarton Oaks, Washington, D.C., Aug. 21-Oct. 7, 1944. The design was discussed and criticised at San Francisco from April 25 to June 26, 1945, on which date representatives of 50 Allied Nations appended their signatures to the Charter. The preamble runs as follows:—

WE, the peoples of the United Nations, determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small; and to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained; and to promote social progress and better standards of life in large freedom; and for these ends to practice tolerance and live together in peace with one another as good neighbours; and to unite our strength to maintain international peace and security; to ensure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest; and to employ international machinery for the promotion of the economic and social advancement of all peoples;

Have resolved to combine our efforts to accomplish these aims.

Accordingly, our respective Governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organisation to be known as the United Nations.

THE XIX CHAPTERS.

The Charter contains XIX Chapters, of which No. 1 recites the purposes and principles of the Charter—To maintain International Peace and Security, to prevent and remove threats thereto and to settle international disputes by peaceful means; to develop friendly relations among nations based on respect for equal rights and self-determination and to achieve international cooperation in solving international problems.

Chapter II deals with Membership, which includes as original members the States which, having participated in the Conference at San Francisco or having previously signed the Declaration of the United Nations on Jan. 12, 1942, at Washington, D.C., sign the present Charter and ratify it in accordance with article 110; and opens membership to all other peace-loving States which accept the obligations contained in the present Charter and, in the judgment of the organisation, are able and willing to carry out these obligations.

Chapter III established the Organs of the United Nations:—A *General Assembly* of all members each having not more than five representatives; a *Security Council* of eleven members, with U.S.A., U.K., U.S.S.R., China and France as permanent members and six others to be elected by the General Assembly, three chosen in the first instance for one year and three for two years, the retiring members being replaced by three elected for two years.

Chapters IV and V deal with the functions and powers of the General Assembly and of the Security Council.

Chapter VI deals with the pacific settlement of disputes, and Chapters VII and VIII prescribe the action to be taken by the Security Council with respect to threats to the peace, breaches of the peace and acts of aggression and authorises the Council in the last resort to take such action by air, sea, or land as may be necessary to maintain or restore international peace.

Chapter IX deals with international economic and social cooperation in order to promote higher standards of living, full employment, and

conditions of economic and social progress and development, and Chapter X establishes an Economic and Social Council of 18 members.

Chapters XI, XII and XIII deal with Territories whose peoples have not yet attained a full measure of self-government and establishes a Trusteeship system for Territories now held under mandate; Territories which may be detached from enemy states and Territories voluntarily placed under the system by States responsible for their jurisdiction.

Chapter XIV establishes the International Court of Justice as the principal judicial organ of the United Nations.

Chapter XV deals with the Secretariat which comprises a Secretary-General and such staff as the organisation may require.

Chapters XVI and XVII contain miscellaneous provisions including transitional security arrangements; Chapter XVIII provides machinery for the introduction, and ratification by a two-third's majority, of amendments; and Chapter XIX requires the Charter to be ratified by the signatory States in accordance with their respective constitutional processes and provides for the Charter coming into force upon the deposit of ratifications by the U.S.A., U.K., U.S.S.R., China, France, and by a majority of the other signatory States.

FLAG OF THE UNITED NATIONS.

The Flag of the United Nations, "The Four Freedoms Flag," consists of four vertical red stripes on a white field.

BRITISH DELEGATION TO SAN FRANCISCO.

Leader, The Rt. Hon. Anthony Eden, M.C., M.P.
Other Members, The Rt. Hon. C. R. Attlee, C.B., M.P.; The Rt. Hon. Viscount Cranborne; The Rt. Hon. Earl of Halifax, K.G.; George Tomlinson, M.P.; The Rt. Hon. Ellen Wilkinson, M.P.; The Rt. Hon. Florence Horsbrugh, C.B.E.; The Rt. Hon. W. Mabane; Dingle Foot.

UNRRA.

The text of a draft agreement on post-war relief prepared by the United States Government after discussions with the British, Dominion, Soviet and Chinese Governments, and sent to all the United Nations and Associated Nations on June 10, 1943, with an invitation to a conference to consider it, was issued in Washington, D.C., on June 11, 1943.

In accordance with the invitation a Conference was held at Atlantic City, N.J., U.S.A., and on November 9, 1943, the agreement was signed by representatives of 44 Nations and authorising UNRRA on their behalf to organise relief and rehabilitation to peoples of occupied countries when freed from the yoke. The preamble to the UNRRA Agreement summarises the work to be accomplished. The forty-four United and Associated Nations who signed the Agreement expressed their determination that "immediately upon the liberation of any area by the armed forces of the United Nations or as a consequence of retreat of the enemy, the population thereof shall receive aid and relief from their sufferings, food clothing and shelter, aid in the prevention of pestilence and in the recovery of the health of the people, and that preparation and arrangements shall be made for the return of prisoners and exiles to their homes, and for assistance in the resumption of urgently needed agricultural and industrial production, and the restoration of essential services."

While all member Governments contribute to administrative expenses, only those countries which have not been invaded are asked to contribute to the operational funds. These latter contributions are at the rate of one per cent. of the national revenue of the contributing countries for the year ending June 30, 1943, the actual funds to be appropriated by the legislatures of the countries concerned. Great Britain's contribution was £80,000,000. The United States was \$1,350,000,000, of which the final \$500,000,000 came before Congress in the autumn of 1945 for appropriation.

The Policy making body is the Council on which each of the Member Governments is represented. The Central Committee acts between meetings of the Council, who can subsequently vary the actions of the Central Committee.

There are two Regional Committees, one for Europe and one for the Far East, on which sit representatives of governments in the areas con-

cerned. These Committees make recommendations to the Central Committee and the Council.

The Third Session of the Council of UNRRA opened on August 7, 1945, in London. Sir Girja Shankar Bajpai, K.C.S.I., C.I.E., chief Indian delegate was appointed Chairman for the Session. Principal resolutions passed at the Meeting were:—

- (1) A recommendation that the member Governments should make an additional contribution approximately equivalent to one per cent. of their national income for the year ending June 30, 1943.
- (2) The admission of Denmark and the Byelorussian and Ukrainian Socialist Soviet Republics to the Council.
- (3) A decision to undertake relief and rehabilitation programme in Italy and Austria.
- (4) Authorisation to operate in Korea and Formosa.

Director of the Dept of Supply, N. I. Feonov (U.S.S.R.).
Director of the Dept. of Finance and Administration, Maj.-Gen. Richard G. Lewis, C.B.E. (U.K.).
Director of the Dept. of Relief Services, E. Rhatigan (U.S.A.).
General Counsel, Dudley Ward (U.K.).

WAR COSTS IN RELATION TO NATIONAL INCOMES. -

Britain has spent more on the War in proportion to her National Income than has any of her Allies, as shown by the following comparative table based on statistics appended to the 20th Presidential Report to Congress on Lend-Lease, etc., reduced, for clarity, to simple terms.

NATIONAL WAR COSTS PER £1 OF NATIONAL INCOME.

Years.	1939.	1940.	1941.	1942.	1943.	1944.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Britain.....	3 0	7 10	9 10	10 7	10 10	10 10
Canada.....	0 5	2 0	3 10	8 0	10 10	10 5
Australia.....	0 5	2 5	5 0	8 7	9 7	8 10
New Zealand.....	0 5	1 10	4 7	10 0	10 10	9 10
U.S.S.R.....	*	*	7 0	9 0	9 7	8 10
U.S.A.....	†	†	2 3	7 0	9 3	9 3

* U.S.S.R. did not officially enter the War until June 1942.

† U.S.A. did not officially enter the War until December 1941.

The Report puts the cost of the War (to June 30, 1945) to the U.S.A. alone at over £70,000 million, of which staggering total "Lend-Lease" aid to her Allies accounts for fully one-seventh or £10,500 million.

THE NINE POINTS OF THE YALTA PLAN.

After a Conference at Yalta, in the Crimea, Mr. Churchill, President Roosevelt and Marshal Stalin issued on February 13, 1945, a statement under 9 headings as under:—

1—Defeat of Germany.

We have considered and determined military plans for the final defeat of the common enemy. Our combined plans will be made known only as they are executed. Meetings of the three staffs will be continued in future whenever the need arises. Nazi Germany is doomed. The German people will only make the cost of their defeat heavier to themselves by attempting to continue a hopeless resistance.

2—Occupation and Control.

Common policies and plans have been agreed for enforcing the unconditional surrender terms which will be imposed. These terms will not be made known till Germany is defeated.

Forces of the Three Powers will each occupy a separate zone of Germany, with a central control commission consisting of the supreme commanders of the Three Powers with headquarters in Berlin. France will be invited to take a zone of occupation and participate as a fourth member of the control commission. It is our inflexible purpose to destroy German militarism and Nazism and to ensure that Germany will never again be able to disturb the peace of the world. We are determined to disarm and disband all German armed forces, break up for all time the German General Staff, remove or destroy all German military equipment, eliminate or control all German industry that could be used for military production, and bring all war criminals to justice and swift punishment.

It is not our purpose to destroy the people of Germany; but only when Nazism and militarism have been extirpated will there be hope for a decent life for Germans and a place for them in the comity of nations.

3—Reparations.

Germany to be obliged to make compensation in kind to the greatest extent possible. A Commission for the Compensation of Damage will be established.

4—Allied Conference.

A United Nations conference will be called at San Francisco on April 25, 1945, to prepare a charter of peace and a security organisation along the lines proposed in the informal conversation at Dumbarton Oaks.

China and France will be consulted and invited to sponsor invitations to the conference jointly with the Government of the United States, Great Britain and the U.S.S.R.

5—Liberated Europe.

A declaration providing for concerning the policies of the Three Powers and for joint action on political and economic problems has been drawn up.

Rebuilding of economic life must be achieved . . . on the principle of the Atlantic Charter—the right of all peoples to choose the form of government under which they will live and the restoration of sovereign rights and self-government to those peoples who have been forcibly deprived of them by the aggressor nations.

The three Governments hope that France may be associated with themselves in the suggested procedure.

6—Poland.

We have agreed that a new Polish provisional Government of national unity should be formed with the inclusion of democratic leaders from Poland itself and from Poles abroad; free elections, universal suffrage and the secret ballot to be adopted.

The three heads of government consider Poland's eastern frontier should follow the Curzon Line, with digressions in some regions in favour of Poland.

7—Yugoslavia.

It has been agreed to recommend to Marshal Tito and Dr. Subasitch that the agreement between them should be put into effect immediately and a new Government formed on that basis.

8—Meetings of Foreign Secretaries.

Throughout the Conference, besides the daily meetings of the heads of Governments and the Foreign Secretaries, separate meetings of the three Foreign Secretaries have also been held daily. These have proved of the utmost value and the conference agreed that permanent machinery should be set up for regular consultation between the three Foreign Secretaries.

9—Unity for Peace as for War.

Our meeting has reaffirmed our common determination to maintain and strengthen in the peace that unity of purpose and action which has made victory possible and certain. It is considered that victory in this War and the establishment of the proposed International Organization will provide the greatest opportunity to create in the years to come the essential conditions of a secure and lasting peace.

ALLIED CASUALTIES IN EUROPE.

From D-Day (June 6, 1944) to VE-Day (May 8, 1945.)

Force.	Killed.	Wounded.	Missing.	Total.
British and Canadian	39,599	126,545	18,368	184,512
American	89,477	367,180	57,877	514,524
French	11,080	45,966	4,201	61,247
Poles	1,189	4,029	375	5,593
Czechs	170	406	14	590
Belgians	55	274	35	364
Netherlanders	20	104	3	127

92 Allied Divisions were employed in the operations under General of the Army Dwight D. Eisenhower: 60 American, 14 British, 5 Canadian, 11 French, 1 Polish.

THE ATLANTIC CHARTER IN BASIC ENGLISH.

The President of the United States and the Prime Minister, Mr. Churchill, acting for his Majesty's Government in the United Kingdom, being now together,* are of the opinion that it is right to make public certain common ideas in the political outlook of their two countries, on which are based their hopes for a better future for all nations.

First, their countries will do nothing to make themselves stronger by taking more land or increasing their power in any other way.

Second, they have no desire for any land to be handed over from one nation to another without the freely voiced agreement of the men and women whose interests are in question.

Third, they take the view that all nations have the right to say what form of government they will have; and it is their desire to see their self-government and rights as independent nations given back to those from whom they have been taken away by force.

Fourth, they will do their best, while respecting their present undertakings, to make it possible for all nations, great or small, whichever side they were on in the war, to take part in the trade, equally with others, and have the materials which are

needed for the full development of their industries.

Fifth, it is their desire to get all nations working together in complete harmony in the field of trade and industry, so that all may be given better working conditions, have greater material well-being, and be certain of the necessities of existence.

Sixth, after the complete destruction of the Nazi rule of force, it is their hope to see a peace made which will keep all nations safe from attack from outside, and which will make certain that all the men in all the lands will be free from fear and need through all their days.

Seventh, such a peace will have to make it possible for all men to go freely everywhere across the sea.

Eighth, it is their belief that all the nations of the earth for material reasons no less than because it is right and good, will, in the end, give up the use of force. Because war will come again if countries which are, or may be, ready to make attacks on others go on using land, sea, or air power, it is their belief that it is necessary to take away all arms from them till a wider system of keeping the general peace, more solid in structure, comes into being.

They will, further, give their help and support to all other possible steps which may make the crushing weight of arms less for peace-loving nations.

* At an Atlantic port in August, 1941.

At a meeting of the Inter-Allied Council at St. James's Palace on Sept. 29, 1941, the Atlantic Charter was accepted and endorsed by the representatives of Belgium, Czechoslovakia, Greece, Luxemburg, Netherlands, Norway, Poland, U.S.S.R., Yugoslavia, and Free France.

On May 26th, 1942, Great Britain and U.S.S.R. concluded a Treaty confirming the alliance during the war against Germany and her associates in Europe; providing for mutual assistance after the war against any further attacks by Germany or her associates; and providing for collaboration with one another and with the other United Nations in the Peace Settlement and during the ensuing period of reconstruction on the basis of the principles set out in the Atlantic Charter.

MERCHANT SHIPPING SUNK.

Sept. 3, 1939, to May 8, 1945.

Flag.	By U-Boats.		By Mines.		By Surface Craft.		By Aircraft.		Other Causes.

MAGNA CARTA.

The Great Charter granted by King John at Runnymede on June 15, 1215 (the sealing taking place four days later), embodied the ideal of liberty towards which Englishmen should strive. Four copies with the great seal of King John are in existence, of which two are in the custody of the British Museum, one is the property of Salisbury Cathedral, and the fourth, which belongs to the Library of Lincoln Cathedral, was exhibited on loan at the World's Fair, New York, in 1939, and has remained for safe keeping in North America. Several unsealed copies are believed to be in existence. The Lacock Abbey copy of Henry III's third re-issue of Magna Carta in 1225 (one of two extant originals, the other being preserved at Durham) was presented to the nation in July 1945 by Miss M. T. Talbot.

The text of the original charter is continuous, but later copies and translations have been divided into 63 chapters, of which:—

Chapter I enjoined that the Church of England shall be free and have all her holy rights and liberties inviolable

II to VI regulated the scale of fees payable to the king by heirs on succession and limited the king's privilege as guardian of minors

VII and VIII afforded similar protection to widows

IX protected a royal debtor from oppression

X and XI protected borrowers from usury and secured priority of debts to the king or lord of the land over private obligations

XII regulated the amount of recognised aids due to the king and declared that other taxes required the consent of the general council

XIII granted to the citizens of London all their ancient liberties and free customs

XIV provided for the meeting of the council when necessary to raise aids, etc.

XV and XVI dealt with incidents of feudal tenure

XVII to XXII reformed abuses in the administration of justice notably by fixing the place where pleas could be heard

XXIII to XXXIV dealt, in general, with abuses connected with feudal services

XXXV established uniform weights and measures throughout England

XXXVI to XXXVIII dealt with the administration of justice and restrained the king from exercising wardship of minors over whom others had the right of wardship

XXXIX established the freedom of the subject, and XL declared "to no one will we sell, refuse, or delay right or justice"

XLI to LV were of a miscellaneous character, dealing with tolls, forest laws, hostages and other subjects

LVI and LVII prescribed Welsh Law for Wales

LVIII promised to restore hostages, etc., to Llewellyn, Prince of Wales

LIX made similar restorations to Alexander I, King of Scotland

LX to LXIII reaffirmed earlier undertakings and provided a committee of 25 barons to secure the performance of the King's promises.

PRESIDENT LINCOLN'S GETTYSBURG ADDRESS.

Abraham Lincoln, born in Harding County, Kentucky, February 12, 1809, was elected President of the United States in 1860 and re-elected for a second term in 1864. He was shot on April 14, 1865, at Ford's Theatre, Washington, and died the next day. The Gettysburg Address was delivered on November 19, 1863, on the site of the Battle of Gettysburg, which was fought July 1-3, 1863.

THE ADDRESS.

Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal.

Now we are engaged in a great civil war, testing whether that nation or any nation so conceived and so dedicated can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field, as a final resting-place of those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But, in a larger sense, we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men, living and dead, who struggled

here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought there have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honoured dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people shall not perish from the earth.

THE LEAGUE OF NATIONS.

The League of Nations, which had for its object the promotion of International Peace and Security, came into being on January 10, 1920. The U.S.A. was not a member and although the League has not been formally dissolved its place has been taken by the United Nations who assent to the Atlantic Charter. The *International Labour Organization*, set up by the League, met on April 20, 1944, at Philadelphia, Pa.

ROMAN EMPERORS.

[The First Triumvirate (Julius Cæsar, Pompey and Crassus) B.C. 60–53.]

THE TWELVE CÆSARS.

- I. Caius JULIUS CÆSAR, born A.U.C. 651 (B.C. 102); Dictator A.U.C. 705 (B.C. 48) Assassinated A.U.C. 709 (B.C. 44).
 [The Second Triumvirate (Octavianus, Antony and Lepidus) B.C. 44–31.]
 II. Caius Julius Cæsar Octavianus AUGUSTUS, born B.C. 63; Emperor B.C. 27; Died A.D. 14.
 III. Claudius Nero Cæsar TIBERIUS, born B.C. 42; Emperor A.D. 14; Died A.D. 37.
 IV. Caius Cæsar CALIGULA, born A.D. 12; Emperor A.D. 37; Assassinated A.D. 41.
 V. Tiberius Drusus CLAUDIUS, born B.C. 10; Emperor A.D. 41; Assassinated A.D. 54.
 VI. Claudius NERO, born A.D. 37; Emperor A.D. 54; Suicide A.D. 68.
 VII. Servius Sulpicius GALBA, born B.C. 3; Emperor A.D. 68; Assassinated A.D. 69.
 VIII. Marcus Salvius OTTO, born A.D. 32; Emperor A.D. 69; Suicide A.D. 69.
 IX. Aulus VITELLIUS, born A.D. 15; Emperor A.D. 69; Assassinated A.D. 69.
 X. Titus Flavius VESPASIAN, born A.D. 9; Emperor A.D. 69; Died A.D. 79.
 XI. Vespasianus Flavius TITUS, born A.D. 48; Emperor A.D. 79; Died A.D. 81.
 XII. Titus Flavius DOMITIAN, born A.D. 53; Emperor A.D. 81; Assassinated A.D. 96.

BALBINUS and PUPIENUS	236–238	CONSTANTINE THE GREAT, 279	306–337

In A.D. 328 Constantine the Great transferred the capital of the Roman Empire from Rome to Byzantium, which had been rebuilt and named Constantinople. After Constantine's death in 337 the Empire was divided. The Western Empire (Rome) fell when Augustulus, the last Emperor, was deposed by Odoacer in A.D. 476. The Eastern Empire (Constantinople) endured until May 29, 1453, when Constantinople was captured by the Ottoman Turks. Constantine Palæologus, the last Eastern Emperor, was slain in battle A.D. 1448.

THE HOLY ROMAN EMPIRE.

The Holy Roman Empire, founded on Christmas Day, A.D. 800, when Charlemagne was crowned at St. Peter's, Rome, by Pope Leo III, passed into German hands when Otto I (936–973) became Emperor, and so endured until Aug. 6, 1806, when Francis II formally resigned the Imperial crown and the Germanic Confederation was dissolved.

Charlemagne was born in 742 at Aix la Chapelle, in the palace of King Pippin, and died there in 814. He raised his birthplace to the rank of the second city of the Empire, many of the Holy Roman Emperors being crowned there until the election of Maximilian II in 1562, when the coronation took place at Frankfurt on Main. Aix la Chapelle, called Aachen by the Germans, was the first German city to be captured by the Allies after the invasion of Europe on "D" Day. The bones of the Emperor Charlemagne, hidden for safety in a copper mine at Siegen, were discovered by the Allies and were restored to Aix la Chapelle by them in May, 1945.

The Holy Roman Empire is described in Churchill's *Life of Marlborough* (Vol. I, p. 74) as being (in 1704) "the survival of a great tradition and a grandiose title" which signified not territory but a sense of membership. The member States covered roughly modern Germany, Austria, Switzerland, Czechoslovakia and Belgium. The ruler was chosen for life by the hereditary Electors of seven States. The Hapsburgs, as sovereigns of Austria, laying claim to Silesia, Bohemia and Hungary, were the most powerful candidates and in practice became the hereditary bearers of the ceremonial office of Emperor. In XIII Century the seven Electors were the Archbishops of Mentz, Treves, and Cologne; the King of Bohemia; the Electors of Brandenburg and Saxony and the Elector Palatine. Bavaria was added in 1648 and Hanover in 1692. In 1777 Bavaria and the Palatinate (of the Rhine) were united. Prussia wrested the leadership of German speaking countries from Austria in 1866 and became head of the North German Confederation in 1867. After the Franco-Prussian War of 1870–71 the German Empire was re-established, the King of Prussia assuming the title of *Kaiser* (Cæsar).

GEORGE VI.	Second son of George V.	1936	WHOM GOD PRESERVE		

The House of Windsor is in direct descent from (*inter alios*) Ecgbert, King of Wessex, Alfred the Great and William the Conqueror; also from the Emperor Charlemagne (b. 742, d. 814), Rodrigo the Cid (b. 1030, d. 1099), the Emperor Barbarossa (b. 1123, d. 1190) and St. Louis, King of France (b. 1215, d. 1270).

WELSH SOVEREIGNS AND PRINCES.

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llewellyn in 1282. The first English Prince of Wales was the son of Edward I., and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfillment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II., was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth. King Edward VIII. was installed as Prince of Wales in Caernarvon Castle on July 13, 1921.

INDEPENDENT PRINCES, A.D. 844 to 1282.

Rhodri the Great	844-878

THE FAMILY OF KING GEORGE III

GEORGE III. was the eldest son of Frederick, Prince of Wales (eldest son of George II.), and of Princess Augusta (youngest daughter of Frederick II., Duke of Saxe-Gotha Altenburg). His Majesty was born at Norfolk House, St. James's Square, June 4, 1738 (May 24, *Old Style*); succeeded to the Throne Oct. 25, 1760; married Princess Charlotte (daughter of Charles, Duke of Mecklenburg-Strelitz); and was crowned with her on Sept. 22, 1761. The government was carried on, from Feb. 5, 1811, until the death of King George III., by his eldest son George, under the title of *Prince Regent*. King George III. died at Windsor, Jan. 29, 1820, his issue being:—

1. George Augustus Frederick, *Prince of Wales*, born Aug. 12, 1762, married his cousin Caroline, daughter of Charles, Duke of Brunswick-Wolfenbützel, by whom he had a daughter, the Princess Charlotte of Wales (born Jan. 7, 1796; died in childbirth, Nov. 6, 1817, having married, May 2, 1816, Prince Leopold of Saxe-Coburg, afterwards King of the Belgians); succeeded to the throne as George IV., Jan. 29, 1820; died June 26, 1830.

2. Frederick, *Duke of York and Albany and Earl of Ulster*, born Aug. 16, 1763, married Frederica, daughter of Frederick William II. of Prussia. The Duke, who was for many years Commander-in-Chief of the Army, died, without issue, Jan. 5, 1827.

3. William, *Duke of Clarence and St. Andrew's and Earl of Munster*, born Aug. 21, 1765, married Adelaide, daughter of George, Duke of Saxe-Meiningen, by whom he had two daughters—Charlotte Augusta Louisa (born and died Mar. 27, 1819), and Elizabeth Georgina Adelaide (born Dec. 20, 1820, died Mar. 4, 1821); succeeded to the throne as William IV., June 26, 1830; died June 20, 1837.

4. Charlotte, *Princess Royal*, born Sept. 29, 1766; married May 18, 1797, Frederick, Prince (afterwards King) of Württemberg; died, without issue, Oct. 5, 1828.

5. Edward, *Duke of Kent and Strathearn and Earl of Dublin*, born Nov. 2, 1767; married Victoria, daughter of Francis, Duke of Saxe-Coburg, sister of Leopold I., King of the Belgians, and widow of Charles, Prince of Leiningen, by whom he had an only child, Her Majesty QUEEN VICTORIA. The Duke died Jan. 23, 1820.

6. Augusta, born Nov. 8, 1768; died, unmarried, Sept. 22, 1840.

7. Elizabeth, born May 22, 1770; married April 7, 1818, Frederick, Landgrave of Hesse-Homburg; died, without issue, Jan. 10, 1840.

8. Ernest, *Duke of Cumberland and Earl of Armagh*, born June 5, 1771; married May 29, 1815, Frederica, third daughter of Frederick V., Grand Duke of Mecklenburg-Strelitz, widow, 1st, of Prince Frederick of Prussia, and and, of Frederick, Prince of Salms-Braunfels; became King of Hanover on death of William IV.; died Nov. 18, 1851, leaving issue, George, King of Hanover (1851-1866), born May 27, 1819; married Feb. 18, 1843, Alexandrina Mary, eldest daughter of the Duke of Saxe-Altenburg, by whom he had issue one son and two daughters; died June 12, 1878.

9. Augustus, *Duke of Sussex*, born Jan. 27, 1773; married Lady Augusta Murray, daughter of John, Earl of Dumfries, but this being contrary to the provisions of the Royal Marriage Act (12 Geo. III. c. 11), the union was pronounced invalid; died April 21, 1843.

10. Adolphus, *Duke of Cambridge, Earl of Tyrerary and Baron Culloden*, born Feb. 24, 1774; married Augusta, daughter of Frederick,

Landgrave of Hesse. The Duke, who acted as Viceroy of Hanover until the death of William IV., died at Kew, July 8, 1850, leaving issue:—

(1) H.R.H. Prince George, *Duke of Cambridge*, born Mar. 26, 1819, Field-Marshal, Commander-in-Chief of the British Army 1856-1895; died, without succession, Mar. 17, 1904.

(2) H.R.H. Princess Augusta, born July 19, 1822; married the Grand Duke of Mecklenburg-Strelitz; died Dec. 5, 1916.

(3) H.R.H. Princess Marie Adelaide, born Nov. 27, 1833; married H.H. Francis, *Duke of Teck*; died Oct. 27, 1897, her issue being:—

Residence of the Duchess of Kent.—3 Belgrave Square, S.W.1; Coppins, Iver, Buckinghamshire.

H.R.H. PRINCE JOHN, born July 12, 1905, died Jan. 18, 1919.

ORDER OF SUCCESSION TO THE THRONE.

The daughters of the Sovereign are in the order of succession to the throne, and after the younger daughter the Duke of Gloucester and his sons; then the Duke of Kent, his brother and his sister; then the Princess Royal and her children; then Princess Arthur of Connaught; then the Countess of Southesk and her son; then Prince Olav of Norway and his children; then the children of the second daughter of the late Duke of Saxe-Coburg (his eldest daughter, the late Queen Marie of Roumania, having formally renounced on her marriage all possibility of claim to the British Throne); then the third daughter (Princess Alexandra of Hohenlohe-Langenburg) and her children; then the children of the late Duke of Connaught's daughter (the late Princess Margaret of Sweden), then his daughter, Lady Patricia Ramsay, and her son; then the Princess Alice, Countess of Athlone, and her daughter. Having thus exhausted the families of all Queen Victoria's sons we turn to her daughters, beginning with the house of the late Empress Frederick, but as this line is wholly out of practical bounds it would be profitless to pursue the investigation any further.

ANNUITIES TO THE ROYAL FAMILY.

The annuities payable to His Majesty and to the members of the Royal Family are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King Edward VII. and of King George V. amounted to £470,000, in addition to annuities to other members of the Royal Family; that of King Edward VIII. amounted to £410,000 (reduced by £40,000 while His Majesty remained unmarried).

His Majesty's Privy Purse	£110,000	Queen Mary	£70,000
Salaries of Household and retired		The Princess Elizabeth	6,000
Allowances	134,000	The Duke of Gloucester	35,000
Expenses of Household	152,800	The Princess Royal	6,000
Royal Bounty	13,200		
	<u>*£410,000</u>		

* The net revenues of the Duchy of Cornwall (which are vested in the Sovereign until the birth of a Duke of Cornwall) amounted to £117,604 in 1936. After the deduction of sums equal to the proposed annuity for the Princess Elizabeth and the additional annuity for the Duke of Gloucester the balance was available, by the King's desire, for reduction of the amount payable from the Consolidated Fund for the Civil List.

The King's Household

The Lord Chamberlain, The Earl of Clarendon, K.G., P.C., G.C.M.G., G.C.V.O., LL.D.

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of His Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Counsellor remains "His Royal Highness," a Duke remains "His Grace"; a Marquess is still styled "Most Honourable." The style of all other Peers, whether Privy Counsellors or not, is "Right Honourable," although it is more usual to describe them with the prefix "The," omitting the more elaborate styles. Chief Magistrates, at home and abroad, entitled to the prefix will be found on p. 603.

BISHOPS (42).—*Style*, The Right Rev. the Lord Bishop of ——. *Addressed as*, My Lord.
[Those marked * always sit—at of the others, except Sodor and Man, by date,
those awaiting admission in order shown (in parentheses)].

Peeresses in Their Own Right.

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A resolution to admit Peeresses in their Own Right to the House of Lords was defeated in that house in 1930. A Peeress in her own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her own right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

DUCHESS IN HER OWN RIGHT.

Created.

Title, Order of Succession, Name, etc.

Eldest Son or Heir.

1900

Fife (2nd), Alexandra (H.R.H. Princess Arthur of Connaught),

SCOTTISH REPRESENTATIVE PEERS

Sixteen Representative Peers are elected for each Parliament by the entire adult Peerage of Scotland, specially convened for that purpose. The following were elected on July 5, 1945:—

Earl of Rothes.	Earl of Breadalbane and Holland, M.C.
Earl of Mar and Kellie, K.T., V.D., T.D.	Viscount Arbuthnott.
Earl of Perth, G.C.M.G., C.B.	Lord Saltoun, M.C.
Earl of Haddington, M.C., T.D.	Lord Sinclair, M.V.O.
Earl of Airlie, G.C.V.O., M.C.	Lord Sempill, A.F.C.
Earl of Leven and Melville, K.T.	Lord Balfour of Burleigh.
Earl of Selkirk	Lord Fairfax of Cameron.
Earl of Dundonald.	Lord Polwarth.

IRISH REPRESENTATIVE PEERS

Twenty-eight Representative Peers were elected as life Members of the House of Lords until the establishment of the Irish Free State in 1920. In reply to a question in Parliament the Prime Minister stated (May 4, 1927) that the Government were advised that no fresh elections could take place in present circumstances.

Peer.	Date of Election.	Peer.	Date of Election
Earl of Wicklow.....	Nov. 28, 1905	Earl of Cavan, K.P., G.O.B.,	
Lord Farnham, D.S.O.	Dec. 18, 1908	G.O.M.G., G.C.V.O., G.B.E.....	Sept. 29, 1915
Viscount de Vesci	Feb. 10, 1909	Earl of Kilmorey, O.B.E.....	Feb. 14, 1916
Lord Kilmaine.....	April 14, 1911	Earl of Kingston	July 10, 1917
Viscount Bangor, O.B.E.	March 7, 1913	Viscount Charlemont	Aug. 19, 1918
Earl of Drogheda, K.C.M.G.....	Nov. 21, 1913	Earl of Roden	Dec. 22, 1919
* Earl of Lucean, K.B.E., C.B.	Aug. 11, 1914		

(And 16 Vacancies.)

* Since created U.K. Baron Bingham.

Courtesy Titles borne by Eldest Sons (in actual use in 1946)

Holders of Courtesy Titles are addressed in the manner shown for holders of substantive titles.

From this list it will be seen that the "Marquess of Blandford" is the heir to the Dukedom of Marlborough; that the "Earl of Aboyne" is the eldest son of the Marquess of Huntly; while "Viscount Acheson" is heir to the Earldom of Gosford, and "Lord Ardee" to the Earldom of Morton; * the titles borne by second heirs are also given, e.g., "Lord Cardiff" eldest son of the "Earl of Dumfries," heir to the Marquessate of Bute; "Lord Paisley" elder son of the "Marquess of Hamilton," heir to the Dukedom of Abercorn; and "Viscount Savernake," eldest son of the "Earl of Cardigan," heir to the Marquessate of Ailesbury.

.. In addition to the above Titles of Courtesy the eldest son of Scottish Viscounts and Barons is usually styled "The Master of —" e.g., "The Master of Falkland," eldest son of Viscount Falkland; "The Master of Garnock," eldest son of Viscount Garnock and grandson of the Earl of Lindsay.

Contractions and Symbols used in pages 225-247.

Contractions and Symbols.—S. or I. appended to the date of creation denotes a Scottish or Irish title, the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as Engl., Brit., or U.K. When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. The mark * signifies that there is no "of" in the Marquessate or Earldom so designated; b. signifies born; s., succeeded; m., married; w., widower or widow; M., minor.

This Majesty's Most Honourable Privy Council

NOTE.—I, prefixed to date, signifies Membership of the Privy Council of Ireland, to which no appointments have been made since 1922.

Deputy Clerk and Registrar, A. J. N. Paterson.

England, Great Britain, U.K.,
(and Ireland marked I).

Baronets

Scotland or Nova Scotia
(marked S).

(Exclusive of such as are Peers.)

NOTE.—Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil, or Military Commission, Letters Patent or other official document." Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert A., Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady A.," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A.," if daughter of a Viscount or Baron "The Hon. Lady A.—."

Certain Baronetcies have been created with remainder to "heirs male and of tailzie," or in special remainder, and are thus heritable through (although they do not devolve on) females. In the first class are Dalryell of the Binns (N.S. 1685), Dunbar of Baldoon (Scot. 1664), Dunbar of Hempriggs (Scot. 1706) and Stirling Maxwell of Pollok (Scot. 1707); in the second class are Hicking of Brockenhurst (U.K. 1917) and Lucas Tooth of Bught (U.K. 1920).

Precedence in Great Britain.

The Sovereign.
The Duke of Gloucester.
The Duke of Windsor.
Sovereign's Nephews.
Ambassadors.
Archbishop of Canterbury
Lord High Chancellor.
Archbishop of York.
The Prime Minister.
Lord President of the Council.
Speaker of the House of Commons.
Lord Privy Seal.
Five following State Officers if Dukes:
(1) Lord Great Chamberlain (on duty); (2) Earl Marshal; (3) Lord Steward; (4) Lord Chamberlain; (5) The Master of the Horse.
Dukes, according to their Patents of Creation:
(1) Of England; (2) of Scotland; (3) of Great Britain; (4) of Ireland; (5) those created since the Union.
Ministers and Envoys.
Eldest sons of Dukes of Blood Royal.
Five above State Officers if Marquesses.
Marquesses, in same order as Dukes.
Dukes' eldest Sons.
Five above State Officers if Earls.
Earls, in same order as Dukes.
Younger sons of Dukes of Blood Royal.
Marquesses' eldest Sons.
Dukes' younger Sons.
Five above State Officers if Viscounts.
Viscounts, in same order as Dukes.
Earls' eldest Sons.
Marquesses' younger Sons.
Bishops of London, Durham and Winchester.
All other English Bishops, according to their seniority of Consecration.
Five above State Officers if Barons.
Barons, in same order as Dukes.
President of H.M.'s Household.

Comptroller of H.M.'s Household
Vice-Chamberlain of H.M.'s Household.
Secretaries of State under the degree of Baron.
High Commissioners.
Viscounts' eldest Sons.
Earls' younger Sons.
Barons' eldest Sons.
Knights of the Garter if Commoners.
Privy Counsellors if of no higher rank.
Chancellor of the Exchequer.
Chancellor of the Duchy of Lancaster.
Lord Chief Justice of England.
Master of the Rolls.
President of the Probate Court.
The Lords Justices of Appeal.
Judges of the High Court.
Vice-Chancellor of County Palatine of Lancaster.
Viscounts' younger Sons.
Barons' younger Sons.
Sons of Life Peers.
Baronets of either Kingdom, according to date of Patents.
Knights of Thistle and St. Patrick if Commoners.
Knights Grand Cross of the Bath.
Knights Grand Commanders of the Star of India.
Knights Grand Cross of St. Michael and St. George.
Knights Grand Commanders of the Indian Empire.
Knights Grand Cross of the Royal Victorian Order.
Knights Grand Cross of Order of the British Empire.
Knights Commanders of the above Orders.
Knights Bachelor.
Official Referees of The Supreme Court.
Judges of County Courts and Judges of the Mayor's and City of London Court.
Serjeants at law.
Masters in Lunacy.
Companions and Commanders, e.g. C.B.; C.S.I.; C.M.G.; C.I.E.; C.V.O.; C.B.E.; D.S.O.; M.V.O. (4th); O.B.E.; I.S.O.

Eldest Sons of younger Sons of Peers.
Baronets' eldest Sons.
Eldest Sons of Knights in the same order as their Fathers.
M.V.O. (5th); M.B.E.
Younger Sons of the younger Sons of Peers.
Baronets' younger Sons.
Younger Sons of Knights in the same order as their Fathers.
Naval, Military, Air, and other Esquires by Office.
Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.
For Dames Grand Cross and Dames Commanders, see pp. 293-4.

LOCAL PRECEDENCE.

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but naturally in the county the Lord Lieutenant stands first, and secondly the Sheriff. In London and other Corporations, the Mayor stands first, after him the Aldermen, Sheriffs, Chief Officers, and Livery. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.
SCOTLAND.—For Precedence in Scotland, see p. 695.

Orders of Chivalry

KNIGHTS OF THE MOST NOBLE ORDER OF THE GARTER (1349)—K.G.

O.M. Mil.

THE ORDER OF MERIT (1902)—O.M. Ribbon, Blue and Crimson.

This Order confers no precedence. It is designed as a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is designed by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the remaining Orders of Knighthood.

O.M. Civ.

MILITARY.
Field Marshal Lord Chetwode,
G.C.B., G.C.S.I., K.C.M.G., D.S.O.

The Order was divided into *Military and Civil divisions in Dec., 1928.*

THE KNIGHTS BACHELOR.

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, Instituted by James I. in the 17th century, lapsed, and in 1900 a voluntary association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown at the head of this paragraph. An annual Knightage is published from information supplied by the authorities and can be obtained on application. The Officers of the Society are:—*Knight Principal*, Sir Gerald Wollaston, K.C.B., K.C.V.O.; *Hon. Registrar*, Major Sir Thomas Lumley-Smith, D.S.O.; *Clerk*, Miss E. Blackwell; *Registry and Library*, 21, Old Buildings, Lincoln's Inn, W.C.2.

ORDER OF THE COMPANIONS OF HONOUR (June 4, 1917)—C.H.

Ribbon, Carmine, with Gold Edges.

This Order consists of one Class only and carries with it no title or precedence, but ranks after the 1st Class of the Order of the British Empire, i.e., Kts. and Dames Grand Cross (Mil. and Civ. Div.). The number of awards is limited to 50 and the Order is open to both sexes.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since the death of Queen Victoria. Badge, in the first three Classes a medallion of Queen Victoria and the Prince Consort, differing in the width and jewelling of the border as the Classes descend, whilst the fourth substitutes a jewelled cipher. All four are surmounted by a crown, which is attached to a bow of white moiré ribbon. The honour does not confer any rank or title upon the recipient.

FIRST CLASS.

H.M. Queen Mary.
Victoria Alberta, Marchioness of
Milford Haven.
H.M. the Queen of the Nether-
lands.

SECOND CLASS.

H.H. the Princess Helena Victoria.
Queen Elizabeth of the Hellenes.
H.H. the Princess Marie Louise.
H.R.H. the Princess Alice,
Countess of Athlone.
H.R.H. the Princess Alfonso
d'Orleans-Bourbon.

THIRD CLASS.

Louisa Jane, Dowager Countess of
Antrim.

FOURTH CLASS.

Hon. Mrs. Alaric Grant.
Hon. Mrs. John Haughton.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted January 1, 1878, and for a like purpose with the simultaneously created Order of the Indian Empire. Enlarged January 30, 1900. Badge, the royal cipher in jewels within an oval, surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient.

H.M. the Queen.
H.M. Queen Mary.
H.R.H. the Princess Royal.
H.R.H. the Duchess of Gloucester.
H.R.H. the Princess Helena Victoria.
H.H. the Princess Marie Louise.
H.H. Maharani Sahib Chimna
Bai Gackwar.
Margaret, Dowager Baroness
Amphill.

Lady Victoria Patricia Helena
Ramsay.
Margaret Etrenne Hannah, Mar-
chioness of Crewe.

Dames Grand Cross and Dames Commanders of the Royal Victorian Order and of the Order of the British Empire.

NOTE.—Dames Grand Cross (G.C.V.O. or G.B.E.) and Dames Commanders (D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, e.g. "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, e.g. "The Countess of —, G.C.V.O." Dames Grand Cross rank after wives of Barons and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

DAMES GRAND CROSS AND DAMES COMMANDERS.

H.M. The Queen, K.G., K.T., G.M.V.O., C.I.	Chelmsford, The Viscountess, G.B.E.	Hudson, Dame Mary Elizabeth, G.B.E. (The Viscountess North- cliffe).

 Willington, The Marchioness of, C.I., G.B.E.
 Wills, Dame Violet Edith, D.B.E.
 Wingate, Dame Catherine Leslie, D.B.E.

REPRESENTATIVES OF ANCIENT IRISH CHIEFTAINRIES.

Under the Brehon law the succession of Irish chieftains was by selection within a limited family group (deróghine), but the principle of seniority was observed by Gaelic genealogists. About the beginning of the 19th century some of the representatives of the last holders of the chieftainries resumed the appropriate designations, which had lapsed with the final destruction of the Gaelic order.

The descent of the following, by primogeniture from the last inaugurated or *de facto* chieftain, has been examined by the Genealogical Office, Dublin Castle. Subject to the possible survival in some cases of senior lines at present unidentified, they are recorded at the Genealogical Office as Chiefs of the Name, and are recognised by courtesy. Certain Chiefs, whose pedigree has not been finally proved, are included in this list on account of their prescriptive standing.

- MAC DERMOT PRINCE OF COOLAVIN:** Charles Edward MacDermot, D.L., b. Dec. 29, 1862; m. 1894 Caroline dau. of John J. Whyte, D.L., of Loughbrickland, Co. Down. *Heir*, Charles John MacDermot, 2nd son, b. Feb. 20, 1899. *Res.*: Coolavin, Co. Sligo.
- MAC DERMOTT ROE.** Dormant.
- MAC GILLYCUDDY OF THE REEKS:** Lt-Col. Ross Kinloch McGillycuddy, D.S.O., b. Oct. 20, 1882; m. 1908 Helen Grace, y. dau. of Edward Courage of Shinfield Place, Essex; *suc.* 1921. *Heir*, John Patrick McGillycuddy, *eld. son*, b. Aug. 20, 1909. *Res.*: The Reeks, Beaufort, Co. Kerry.
- MACMORROUGH KAVANAGH:** Arthur Thomas Kavanagh, b. Jan. 12, 1888; m. 1914, Minna Alice, dau. of Samuel Gurney Buxton, of Cotton Hall, Norwich. *Heir*: Dermot Kavanagh, *bro.*, b. Jan. 9, 1890. *Res.*: Borris, Co. Carlow.
- O'BRIEN OF THOMOND:** Sir Donough Edward Foster O'Brien, 16th Baron Inchiquin, and 9th Baronet; b. Jan. 5, 1897; *suc.* 1929; m. 1921, Honble Anne Thesiger, 2nd dau. of 1st Visc. Chelmsford. *Heir*: Honble Phaedric Lucius Ambrose O'Brien, *bro.*, b. April 4, 1900. *Res.*: Dromoland Castle, Newmarket-on-Fergus, Co. Clare.
- O CALLAGHAN:** Juan O Callaghan, b. 1934; *suc.* 1944. *Heir*, Juan O Callaghan, *eld. son*, b. 1934. *Res.*: Tortosa, Spain.
- O CONOR DON:** Rev. Charles Denis O Connor, S.J., M.A., H.D.E.; b. March 25, 1906; *suc.* (as 25th O Connor Don) 1943. *Heir*, Charles William O Connor of Ashley Moor, Orleton, Ludlow, Shropshire, who has issue 2 sons, *cousin of father*, b. Dec. 17, 1878. *Address*: Rathfarnham Castle, Dublin.
- O DONOGHUE OF THE GLENS:** Geoffrey O Donoghue, b. Oct. 8, 1896; m. 1935 Kathleen, dau. of — Finnegan. *Heir*, Geoffrey Vincent Paul O Donoghue, *eld. son*, b. July 19, 1937. *Res.*: The Crossways, Ballymoney, Gorty, Co. Wexford.
- O DONOVAN:** Col. Morgan John Winthrop O Donovan, M.C.; b. 1893; m. 1926 Cornelia, dau. of late Dr. William Henry Bagnell of Pau. *Heir*, Morgan Gerald Daniel O Donovan, *eld. son*, b. May 4, 1931. *Res.*: Arda, Northam, Bideford, Devon.
- O MORCHOE:** Capt. Arthur Donel MacMurrough O Morchoe, *Chief of his Sept.* of Oulartleigh, Co. Wexford; b. 1892; *suc.* his father 1921; m. 1926 Isabel Hester Louise Carden; *Heir*, Lieut.-Col. K. G. O'Morchoe, *bro.* b. 1894. *Res.*: Coolinagoose, Inch, Co. Wexford.
- O NEILL OF CLANDEBOY:** H. E. Dom Hugh O'Neill, b. 1908; *suc.* his father 1940. *Heir*, Hugo O'Neill, *eld. son*, b. March 7, 1939. *Res.*: Lisbon, Portugal.
- O SIONNAIGH** (called *The Fox* since 1552): Capt. Niall Arthur Hubert Fox, late Royal Irish Regt.; b. 1897; m. 1925. *Heir*, Arthur James Fox, *uncle*, b. June 1, 1871.
- O TOOLE OF FER TIRE:** Charles Joseph Antoine Thomoy O Toole, *Comte O Toole*; *suc.* his father 1889. *Res.*: 10 Ave. des Champs Elysées, Paris.
- * * * *
- O MAHONY OF KERRY** (Dermot Gun O Mahony of Grange Con, Co. Wicklow, who *suc.* his father Oct. 31, 1930). This case is still under investigation.
- * * * *
- While not representatives of Chieftainries in the strict sense the following have long been styled as under and their pedigrees, duly authenticated, are on record at the Genealogical Office.
- O GRADY OF KILBALLYOWEN:** Major Gerald Vigors de Courcy O Grady, R.A.; m. 1941 Pamela Violet, dau. of late Lt.-Col. T. A. Thornton, C.V.O., of Brockhall, Northampton. *Heir*, Brian de Courcy O Grady, *eld. son*, b. Sept. 2, 1943. *Address*: Junior United Service Club, London, S.W.1.
- O KELLY OF GALLAGH AND TYCOOLY:** Walter Joseph O Kelly, *Count or the Holy Roman Empire*; b. 1876; m. 1912 Mary Louisa, dau. of Hyacinth D'Arcy of Newforest, Co. Galway. *Heir*, Count Walter Lionel O Kelly, *eld. son*, b. July 17, 1921. *Res.*: Athlone.

THE VICTORIA CROSS. F.C.

The ribbon is *Crimson* for all Services (until 1918 it was *Blue* for Royal Navy).
FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th, 1856.*

The VC is worn before all other decorations, on the left breast, and consists in a cross-pattee of bronze, 1½ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." From the institution of the decoration in January 1856 until March 1942 Victoria Crosses were, by Queen Victoria's decree, struck from the metal of guns captured by the British at Sevastopol during the Crimean War; the supply of Sevastopol metal having run out the crosses are now made from gunmetal supplied by the Royal Mint. In all three fighting Services, holders of the VC below commissioned rank (or below warrant rank in the Royal Navy) received an annuity of £10 a year concurrently with the award, plus an addition of 6d. a day (£9 as. od. a year) to the recipient's pension. In the case of a posthumous award £50 is credited to the estate of a recipient, or the balance of £50 if that amount has not been paid during his lifetime; an additional annuity of £5 is paid for each bar, such bar being added for additional acts of bravery which would have entitled the recipient to the Victoria Cross if he or she had not already received it. In the event of an annuitant being unable to obtain a livelihood on leaving the Service, the amount of the annuity may be increased to £75. In 1917, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Empire.

Awarded 1940-1945.

GERMAN CASUALTIES.

The Prime Minister stated in the House of Commons (Oct. 11, 1945) that the estimated total losses of the German armed forces in killed, permanently wounded and permanent medical casualties between Sept. 1, 1939 and May 10, 1945 were 7,400,000.

Reuter's announced (July 29, 1945) that documents found in the house at Flensburg of General Reinecke, head of the German high command propaganda department, gave a detailed list of 4,064,438 German casualties from September 1, 1939, to November 30, 1944.

These documents gave a total of 1,911,300 killed and dead from all causes on all fronts and in all services. In addition to the 4,064,438 casualties, the documents gave 774,148 men in hospital on November 30 last. The listed figures of Reichswehr casualties on the various fronts are:—

Western front before D-Day: Dead, 66,000; missing, 3,000; from D-Day to November 30, 1944: dead, 54,000; missing, 338,000.

North Africa: Dead, 12,000; missing, 90,000.

Italy: Dead, 48,000; missing, 97,000.

Balkans: Dead, 24,000; missing, 12,000.

Russia: Dead, 1,419,000; missing, 907,000.

Home front, presumably due to air attacks: Dead, 64,000; missing, 1,000.

German Army casualties were given as: Dead, 1,709,739; missing, 1,540,829; reported p.o.w., 442,100; discharged, 379,108; deserters, 593.

Luftwaffe: Killed, 149,787; missing, 141,020.

Navy: Dead, 51,774; missing, 32,205, of whom 8,988 are prisoners; discharged, 10,384. Executions for treason, presumably including desertion and similar offences, for all services, were listed at 9,000.

GERMAN ROCKET (V2) ATTACKS ON SOUTHERN ENGLAND.

(Additional to Doodlebugs.)

Total Number that fell	1,050
Total Number of persons killed	2,754
Total injured and detained	6,523
First Rocket at Chilwick, Sept. 8, 1944.	
Last Rocket at Orpington, March 27, 1945.	

Worst Incidents.

New Cross (Nov., 1944).—167 Killed, 108 Injured.
Farrington Market, London (March, 1945).—115 Killed, 123 Injured.
Hughes Mansions, Stepney (March, 1945).—131 Killed, 49 Injured.
Mackenzie Road, Islington (December, 1944).—68 Killed, 99 Injured.

U-BOATS DESTROYED.

713 German U-Boats were destroyed between Sept. 3, 1939 and May 8, 1945. Of this total, 462 fell to British Empire forces; 151 to U.S. forces; and 100 were sunk by mines laid by Bomber Command, R.A.F.

THE GEORGE CROSS, &c.

The ribbon is *dark blue* threaded through a bar adorned with laurel leaves.

FOR GALLANTRY.

INSTITUTED September 24th, 1940 (with amendments, November 3rd, 1942).

The GC is worn before all other decorations (except the VC) on the left breast and consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon $1\frac{1}{2}$ inches wide.

The cross is intended primarily for Civilians and awards to the Fighting Services are confined to actions for which purely military Honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger.

The GEORGE MEDAL, GM, instituted by the same Royal Warrant, is circular in form and in silver bearing on the obverse the Crowned Effigy of the Sovereign and on the reverse a representation of St. George slaying the Dragon on the coast of England, the design being circumscribed by the words "The George Medal." The Medal is designed primarily for civilians and awards to the Fighting Services are confined to actions for which purely military Honours are not normally granted. The Medal is awarded only for acts of great bravery. Foreign persons are eligible for the award of the Medal. It is worn on the left breast & suspended from a ribbon $1\frac{1}{2}$ inches wide of *red* with 5 equidistant narrow vertical stripes of *blue*, immediately after the King's Police and Fire Services Medal for Gallantry.

When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

RECIPIENTS OF THE GEORGE CROSS.

The Houses of Parliament.

Parliament may be said to owe its inception to the unauthorised scheme of Simon de Montfort, Ear. of Leicester, who (by the *Provisions of Oxford* in 1258), in opposition to Henry III, ordered two knights from each shire and representatives from certain boroughs to meet selected barons and clergy at an assembly at Oxford; but Parliament did not assume its present form of King, Lords and Commons until 1295, when Edward I summoned selected barons and clergy: two knights from each shire, chosen by the freeholders at the shire court; and two burgesses from every city, borough and leading town, chosen by the inhabitants. This has been called the *Model Parliament* and is regarded as closer in form to parliament of the present day than Simon de Montfort's or other earlier assemblies on account of the method of obtaining representative commoners, the sheriffs being required (in 1295) to cause them to be elected, whereas in former writs the sheriffs were instructed only to cause them to be in attendance.

In Congress of the U.S.A. there is 1 Woman Senator (96 Senators) and 7 Members of the House of Representatives (435 Members).

THE RIGHT TO VOTE.

Every person registered as a parliamentary elector is entitled to vote at an election of a member to serve in Parliament. But at a *General Election* a person shall not vote for more than one constituency for which he or she is registered by virtue of a residence qualification, or for more than one constituency for which he or she is registered by virtue of other qualifications of any kind; which means that a person (man or woman) may, if qualified, lawfully vote twice at a General Election, but one vote must be in respect of a residence qualification, and each vote must be recorded in a different constituency.

The Blind Voters' Act, 1933, enables a blind voter to be assisted in voting by a relative or friend.

ELECTORS ON THE PARLIAMENTARY REGISTER.

In 1832 the electors numbered about 1,000,000, increased to 2,500,000 in 1867, 5,000,000 in 1884, 21,000,000 in 1918 (when women of 30 were enfranchised), to 28,850,000 in 1929 (women having the vote on the same terms as men), and to 32,836,419 in 1945 (including Service voters).

Parliamentary Summary, Lords and Commons, 1944-45

FROM WAR TO PEACE.—In a few brief months, Parliament saw the end of the World War, from the defeat of Germany on May 8 to the surrender of Japan on Aug. 14. The first great event, the close of the European War, was quickly followed by the break-up of the famous Coalition Government and a dissolution. The general election gave the Labour Party a majority over all the rest of the House of Commons and Mr. Attlee formed an Administration, which began its Parliamentary career on the day after the surrender of Japan, within a few days of the first atomic bomb and the Soviet Government's declaration of war.

REPAIRING BOMBED AREAS.—The closing weeks of the 1944 Session were mainly devoted to the Committee stage of the Town and Country Planning Bill which had received its second reading before the summer recess. Designed to make provision for the acquisition and development of land for planning purposes, the Bill was unfavourably received by the Labour Party on the ground that it was not a national plan and did not provide land nationalisation. Mr. W. S. Morrison, who was in charge, said that the measure was directed to the repairing of bombed areas and expressed the hope that a better Bill would emerge from discussions in committee. On the opening day of that stage, Oct. 3, an amendment moved by Mr. Silkin, intended to widen the definition of land which could be subjected to compulsory purchase to cover other areas besides those which had suffered from enemy attack, was defeated by 179 to 87. During discussion of an amendment to reduce from 5 to 2 years the period during which an application could be made for a compulsory purchase order for dealing with war damage, Mr. Morrison said that one of the objects of the Bill was to see that battered sites were restored upon lines which made them more worthy to live in and it was for this reason that the 5-year provision should be made. The amendment was withdrawn. The clause laying down the principles for the assessment of compensation in connection with the acquisition of land for public purposes by reference to 1939 prices aroused considerable controversy on Oct. 6, and eventually the Prime Minister suggested that the clause and others dealing with compensation should be postponed. The Government, he said, must have the Bill to enable local authorities to begin their planning many months ahead, but it would be better to lose it rather than have a party dispute. Eventually it was agreed to postpone the particular clauses, and the committee stage was concluded on Oct. 9. A compromise on the subject was reached and on Oct. 13, Mr. Attlee explained that the Government intended to maintain the general principle that compensation should be assessed on prices as at *Mch.* 31, 1939, but additions up to 30 per cent. would be allowed in certain types of cases. On report on Oct. 18, a new clause was added empowering the Minister to compile a list of buildings of special architectural or historic interest, and an amendment to reduce from 5 to 2 years the period within which an order authorising compulsory purchase could be submitted was carried by 177 to 66. The new compensation clauses were read a second time on Oct. 19 and the Bill received its third reading on Oct. 26. In the Upper Chamber, Lord Woolton on Nov. 7 accepted a compromise period of 3 years instead of 2 years for applying for a compulsory purchase order. The Commons on Nov. 16 protested against this change but finally agreed to the amendment and the Bill received the Royal Assent on Nov. 17.

HIGHER UNEMPLOYMENT BENEFIT.—Another measure passed before the Session ended increased the benefit payable under the Unemployment Insurance Acts by amounts ranging from one to six shillings from a date to be fixed and without raising the contributions payable. The Bill was

intended to cover the period before the new social insurance scheme could be introduced and the months of transition from war to peace production. The rates authorised by the new measure were advanced by 4s. to 24s. a week for men, 22s. a week for single women, and by 2s. to 20s. a week for married women. For young men and women between 18 and 21, the rates were raised to 19s. and 17s. a week respectively, and for boys and girls of 17 to 21s. and 10s. 6d. respectively. Benefit rates under the agriculture scheme were raised by 4s. a week for men and by 3s. a week for women, young men and women and boys and girls of 17. The Bill was read a second time on Oct. 12 when Mr. Bevin said the Government thought it necessary to introduce the proposals in order to meet conditions that might soon arise and would continue in the transition from war to peace. There was bound to be a gap in many cases between the displacement of people from munitions and their resettlement in normal occupations. The Government's view was that during the transition there would be temporary unemployment in some areas. He added that the Unemployment Fund now stood at £290,000,000, and it would not be necessary to increase contributions or make any inroad into the Fund, providing the unemployment did not rise above 8 per cent. on the average, and he did not believe that it would do so. The committee stage was concluded and the Bill read a third time on Oct. 13, after the defeat by 107 to 6 of an amendment to increase the benefit by 10s. instead of 4s. The Royal Assent was given on Oct. 26. It was joined on the Statute Book on Nov. 17 by the Bill to set up a Ministry of Social Insurance, the introduction of which followed the adoption without a division of a motion welcoming the Government's decision to set up an enlarged scheme of social insurance and family allowances. The measure transferred to a single Minister the powers until then divided between the Minister of Health, the Secretary of State for Scotland, the Minister of Labour and the Home Secretary, and in Committee the name of the new department was changed to the Ministry of National Insurance.

REDISTRIBUTION OF SEATS.—In preparation for the general election, Parliament also passed a Bill setting up machinery for a partial redistribution of seats. Moving the second reading on Oct. 10, Mr. Herbert Morrison said that the Bill set up four permanent Boundary Commissions for England, Scotland, Wales and Northern Ireland to review the state of constituencies periodically and prepare schemes of redistribution in accordance with the principles prescribed by Parliament, the schemes to be subject to Parliamentary approval. So far as England was concerned, the Commission was to undertake at once the division of constituencies which in 1939 had an electorate of more than 100,000, providing one member for every 50,000 electors. A schedule to the Bill enumerated 20 such constituencies, which were to be divided into 45, thus increasing temporarily the membership of the House by 25 to 440. Another schedule instructed the Commissioners that in the general redistribution which was foreshadowed the number of seats for the whole of Great Britain should be not substantially greater or less than 625. Scotland,

Northern Ireland and Wales were to suffer no reduction of their present representation, and University constituencies were not to be affected. In Committee on Oct. 12, an amendment was agreed to giving the Commission for England power to consider not only the large constituencies specified but other abnormally large constituencies. An amendment to provide that the City of London should not have the special treatment of two members was negatived by 153 to 38, and another to delete University constituencies from the purposes of the Bill was rejected by 152 to 16. The Committee stage was concluded on Oct. 16, when the Bill was read a third time. It received the Royal Assent on Oct. 26, after passing through the Lords without much discussion.

THE LAST SESSION.—The tenth and last session of a memorable Parliament was opened on Nov. 23 by the King, who was accompanied by the Queen. In his Speech from the Throne, His Majesty referred to the plight of the German armies, and to the shrinking area still under Japanese control in the Pacific. Ministers were actively preparing plans, he said, to ensure that, once the war in Europe was over and without in any way prejudicing the active prosecution of the war against Japan, an increasing part of the country's resources was made available for civilian production. Methods were being considered by which a high level of employment could be maintained and additional housing accommodation provided. As opportunity served, progress would be made with legislation for a comprehensive health service, an enlarged and united scheme of national insurance, a new scheme of industrial injury insurance and a system of family allowances. The Duke of Northumberland moved and Lord Rennell seconded the Address in reply in the Lords, and this was agreed to. In the Commons, Major W. P. Sidney, VC, moved the Address in a maiden speech, and this was seconded by Mr. T. Fraser. In the subsequent debate, Mr. Churchill said the legislative programme outlined in the King's Speech would be proceeded with as opportunity served and progress would be governed by the length of the session, which depended on the duration of the European War. Mr. Eden, speaking on Dec. 1, said if there were a general election and a Labour Government were returned he had no doubt that that Government would put through whatever was outstanding in the Government's social reform programme, and members of the Conservative Party would give them support. If the Conservative Party were returned they would then do their best to put that programme through, and they would feel that they had a right to count on the Labour Party giving them their support. An amendment regretting the absence of proposals for the reorganisation of the Board of Trade and steps to improve export trade was withdrawn on Dec. 5, and the only division took place on Dec. 8 when an amendment on Greece was rejected by 279 to 30. The motion for the Address was agreed to on Dec. 12.

LOCAL GOVERNMENT ELECTIONS.—The extension of the right to vote in local government elections to all persons qualified as Parliamentary voters was one of the main provisions of the Representation of the People Bill, which Mr. Herbert Morrison introduced on Dec. 13. The measure also abolished for both Parliamentary and local elections the qualification of a spouse to vote in respect of premises occupied by the husband or wife, thus reducing the number of business premises voters. It provided for the resumption of borough council elections in England and Wales and all local elections in Scotland in November and December,

1945, and for county, district and parish councils in England and Wales in the spring of 1946. Finally, the Bill authorised fixed date registers for both Parliamentary and local elections. Moving the second reading on Dec. 19, the Home Secretary said that the Bill extended the principle of universal adult suffrage for men and women alike and added about 7,000,000 electors to the local government register. It improved the registration machinery and further democratised the Parliamentary franchise. Before the committee stage opened on Jan. 17, Mr. Attlee announced that whenever the contemplated general election was decided on an announcement of the date would be made at least three weeks, plus 17 days, before polling day, thus reaffirming the Government's intention that there should be no snap election when the war in Europe was over. This promise was fulfilled when Parliament was later dissolved. In committee, Mr. Morrison moved a new clause to provide for postal instead of proxy voting by Service voters at Parliamentary elections, and this was added to the Bill. An amendment to prevent any person voting more than once in any election was defeated by 123 to 51. On report an attempt to give local authorities the opportunity of using a system of Proportional Representation in their elections was negatived by 208 to 17. The Bill received the Royal Assent on Feb. 15.

DISTRIBUTION OF INDUSTRY.—Designed to abolish the former distressed areas and to make a beginning in carrying out the principles of the Barlow report on the redistribution of the industrial population, the Coalition Government's Distribution of Industry Bill was only passed by agreement to delete its most contentious proposal. Moving the second reading on Mar. 21, Mr. Dalton said that unless the Government were given the powers sought in the Bill, certain areas would, within the next few years, relapse into prolonged unemployment, whatever success might attend the Government's efforts to achieve a high level of employment for the country as a whole. The Bill would enable them to steer industrial enterprise not only towards development areas but towards other areas where need for employment or further diversification of industry might arise. Power was also given to disperse industries essential to war. The Bill was referred to a Standing Committee, which reported the measure after the dropping of a clause intended to give the Board of Trade power to prohibit the erection or extension of industrial buildings in areas where it appeared that the provision of further industrial premises would be seriously detrimental to the proper distribution of industry. The Bill was read a third time on June 4, when Mr. Oliver Lyttelton, the new President of the Board of Trade, said that the positive powers which the Bill gave were necessary for the many plans, already on paper, for building new plants and developing trading centres, to take form as quickly as possible. The Royal Assent was given on June 15.

REGULATING WAGES.—Another measure affecting industry in a different manner was the Wages Councils Bill, designed to ensure orderly wage regulation and to establish a system of standard wage rates by means of voluntary or statutory machinery. Mr. Bevin, explaining the Bill on Jan. 16, when it received a general welcome on second reading, said that its purpose was to bring the Trade Boards Acts up to date and to rename the Boards Works Councils. It was also proposed to provide additional powers for establishing Councils where the voluntary machinery was inadequate, or likely to become inadequate, and reasonable standards of remuneration were not likely to be

maintainable. The original Boards could not fix overtime rates or remuneration as was proposed under the Bill. Works Councils would also be charged to be collectors of information affecting the different industries in order to provide the Government with a review of their prospects. The new Councils would have as their first power the fixing of remuneration including a guaranteed weekly wage. For a period of five years, employers would be under an obligation to observe no less favourable terms of employment than those set up between employers and the trade unions. The Bill, which received the Royal Assent on *Mch.* 28, provided that a Wages Council would consist of equal numbers of persons representing employers and workers and three independent persons chosen by the Minister of Labour. Besides fixing remuneration, it had power to arrange paid holidays. It was anticipated that the proposals would affect about 15,500,000 workpeople.

WAR WORKS ON REQUISITIONED LAND.—Considerable opposition was shown to the Requisitioned Land and War Works Bill, designed "to conserve, subject to appropriate safeguards, the use or value of assets created at the public expense on requisitioned or other land." It gave the Crown power of compulsory acquisition of land on which buildings had been erected or work done at the Government's expense for war purposes, subject to the control of the War Works Commission to be set up to examine objections. Sir John Anderson, moving the second reading on *Feb.* 13, said that under the stress of war extensive works were carried out at the public expense on requisitioned land or on land which remained in the possession of its private owner. These works included factories, airfields, camps and defence works, and the expenditure involved amounted to probably £700,000,000. Most of the expenditure, said the Chancellor, must be regarded as having served its purpose when the war came to an end, but a not inconsiderable part was represented by valuable material assets. If the existing law took its course, the land with the buildings and works on it would have to be handed back to the private owner with compensation for damage. In the case of the vast majority of the works on requisitioned land, the land would be returned to the owner. After hearing a number of critical speeches, Sir John expressed his willingness to consider amendments, and claimed that the Commission to be set up was a most important safeguard for interests which might be affected. Eventually a motion to reject the Bill was withdrawn, with the intimation that the opposition would be resumed in Committee. The controversial question of the preservation of open spaces was postponed until on *May* 2 Sir John Anderson said that the Government had put down new clauses designed to give effect to the plea that commons and open spaces should not be alienated without the express permission of Parliament. When the Bill was considered on report, an amendment was agreed to to exclude land to which the public had rights of access. Another amendment agreed to provide for an extension of the Minister's powers to remove war works constructed on land to be restored to cases where the value of any land had been diminished by the Government war use. The Bill was then read a third time, and after being passed by the Upper Chamber received the Royal Assent on *June* 15.

FAMILY ALLOWANCES.—A new chapter in developing the health and well-being of the children of the country was opened by the Family Allowances Bill, which provided for financial assistance from the Exchequer to over 2,500,000

families in which there was more than one child. Under the measure, an allowance of 5s. a week would be paid to parents for each child after the first in a family, the estimated cost to the Exchequer being £57,000,000 for the first year. Sir William Jowitt, Minister of National Insurance, moving the second reading on *Mich.* 8, said the primary object of the Bill was to ease the financial burden which at present oppressed parents with large families, and so promote the health and well-being of the children. The Government had also decided to give a great increase in the free meals and milk for children in grant-aided schools, the scheme costing £60,000,000 a year when it was fully developed. Dealing with the somewhat controversial matter of whether the payment should be made to the father or the mother, Sir William said they had decided that the money should belong to the father but that either parent should be able to encash the money. The matter would, however, be left to a free vote. There would be no duplication with allowances paid under other schemes, he added. The discussion centred mainly on the question as to whether father or mother should receive the allowance, Miss Eleanor Rathbone, "the grandmother of the proposal," and Sir William Beveridge being among those who favoured payment to the mother. In other respects there was general approval for the Bill, which was read a second time without a division. The problem was decided in committee on *May* 10, when an amendment was agreed to providing that the allowance should be paid to the mother in the case of the family of a man and his wife living together. A week later the Government were pressed to alter the clause providing that regulations might be made to reduce or withhold the allowance from the family of a Serviceman. M.P.s urged that the allowance should be treated as additional to whatever allowances were given from other sources. Sir John Anderson said that the Government did not intend to use their powers to the detriment of the serving soldier. He promised to re-draft the clause, but said that the principle of no duplication of allowances in one great scheme of social insurance must be maintained. The committee stage was concluded, but before further progress was made the Coalition Government ceased to exist. Discussions took place, and as a result Mr. Hore-Belisha, the new Minister, on *June* 11 submitted fresh clauses intended to meet objections taken to the measure, particularly on the score of the treatment of the families of Servicemen. He said the Government held the view that members of the forces were as much entitled to benefit as any other wage-earner. They would receive the family allowance in addition to any other allowance paid to them. The agreement was welcomed, and the Bill was passed through all its remaining stages. It was quickly passed by the Upper Chamber and received the Royal Assent on *June* 15.

STIMULATING INDUSTRIAL ACTIVITY.—Fulfilling a promise which he outlined in his previous Budget speech, Sir John Anderson presented the Income-Tax Bill to give taxation allowances on the cost of new industrial buildings, plant and machinery. It received a second reading without a division on *Mch.* 14, when the Chancellor said the measure was meant as an act of policy deliberately to weigh the rates in favour of those forms of industrial development which were most necessary to the community. He claimed that it was inspired by the Government's genuine desire to prepare for and stimulate the forward surge of productive industrial activity on which the whole programme of reconstruction and social reform would depend. His

proposal was that there should be an allowance of 10 per cent. of the expenditure on industrial buildings, and that the balance of the cost should be written off over a period. In the case of machinery the annual allowance which followed the initial allowance varied with the nature of the machine. For buildings, the annual allowance would be a general one of a per cent. Existing industrial buildings would not qualify for the initial allowance, but they would qualify for the annual allowance for such balance over a life of 50 years as might remain. During the committee stage on *Apl. 27*, Sir John said he was prepared to consider treating structural work in connection with the installation of equipment which would qualify for relief as part of the cost of installing that equipment provided it had no value apart from the equipment which had been installed. The remaining stages were obtained without much discussion, and the Bill was given the Royal Assent on *June 15*.

THE FIRST BUDGET.—Except for minor alterations, Sir J. Anderson's Budget, opened on *Apl. 24*, almost on the eve of the close of the European War, left taxation unchanged, but the Chancellor expressed the opinion that another Budget might be necessary later in the year and hinted that this might permit some reductions. For the first time, he said, total expenditure in the previous year had exceeded £6,000,000,000. The precise total was £6,063,000,000, or £126,000,000 more than his estimate, a large proportion of the excess arising from expenditure on war damage. On the revenue side also his expectations were exceeded. For Inland Revenue, the record estimate of £2,000,000,000 had been passed by £29,000,000. Income-tax at £1,317,000,000 showed an increase of £17,000,000, excess profits tax and national defence contribution at £510,000,000, an improvement of £10,000,000, and estate duties at £111,000,000, a surplus of £11,000,000. Customs²⁶¹ Excise duties yielded £1,076,000,000, compared with the estimate of £1,038,000,000, the surplus being mainly due to the beer duty receipts exceeding Budget expectations by nearly £20,000,000, and a large increase in the turnover of aviation spirit, accounting for a surplus of a further £20,000,000. Revenue exceeded the estimate by £135,000,000, and the amount by which expenditure over the year exceeded revenue was £2,825,000,000, or £11,000,000 less than the estimate. Sir John claimed that the really significant feature of the year was that the proportion of the total expenditure met out of revenue was 53 per cent., a higher figure than in any previous war year, a striking manifestation of the steadfastness and resolution which had helped to bring the country to the eve of victory. He disclosed that during the five and a half years of war, our total expenditure was £27,400,000,000, of which no less than 49 per cent. was met out of current revenue. In the same period 42 per cent. of the whole of the personal income of the community had gone by taxation and savings towards financing the Government's expenditure, a remarkable record of individual sacrifice and effort. Next the Chancellor came to the few small adjustments in taxation that he proposed. He said that the duties under the Safeguarding of Industries Act and the Import Duties Act would be restored to the former level after the victory over Germany. Imported hydrocarbon oils used as raw materials for chemical synthesis were to be freed from Customs duty, and an allowance would be made equal to Customs duty in respect of indigenous oils used in these processes. The duty on hops, which would expire in August, would be

renewed for another four years, and educational entertainments would be exempted from entertainments duty, whether they were cultural or not. Sir John said that the new system of deducting income-tax from salaries and wages had operated with remarkable success. About 12,000,000 persons were liable to tax under the scheme, and in the year just concluded about £540,000,000 was collected in this way, an increase of about £100,000,000 over the corresponding yield for the previous year. Perhaps a quarter of this was, he said, due to the efficiency of P.A.Y.E. as a means of collection. With regard to excess profits tax, he proposed an extension of the special relief for small businesses. Where the existing standard profit was less than £12,000, there would be an addition to the standard allowance of one-tenth of the amount by which the profit fell short of £12,000. The cost of this relief he estimated at about £12,000,000. Sir John announced the conclusion of a Treaty with the United States to provide relief from double taxation in respect of incomes coming under charge to tax in the two countries, and said he hoped discussions on the subject would be opened with the Dominions during the summer. In a forecast of future finance, the Chancellor said that for the first three years after the war he expected a very heavy deficit on current account on the balance of payments. In other words, for the imports which would be absolutely essential to feed our people and to provide raw materials for industry, we should have to incur further indebtedness. Much of the creative intelligence in industry which had come so splendidly to the assistance of the Government during the war would have to devote itself to the expansion of our exports. We should have to undertake heavy obligations in the interests of the security of the world, but we must be very careful to see that these obligations were accurately defined. Assuming that the war in Europe would end in the early summer, Sir John put the Debt Charge at £465,000,000, and asked for the usual power to borrow if necessary to provide for the contractual sinking fund. Civil Service Votes would require £581,000,000, which was £68,000,000 higher than for the past year, the increase being mainly due to the Education Act reforms and post-war developments. He proposed to take the figure of £4,500,000,000 for Votes of Credit, as he could not indulge in excessive optimism. Thus, total expenditure would be £5,565,000,000 for the coming year, or about £500,000,000 below that for 1944-45. On the revenue side, he estimated the yield of income-tax at £1,350,000,000, an increase of £33,000,000. The yield of excess profits tax he put at £500,000,000, which was £10,000,000 less than the amount received in the previous year, and the remaining Inland Revenue duties were estimated at £215,000,000, an increase of £13,000,000, making a total for Inland Revenue of £2,065,000,000. Among Customs and Excise revenue, he expected £400,000,000 from tobacco and £300,000,000 from beer and the total he estimated at £1,130,000,000, which was £54,000,000 more than he received last year. With £70,000,000 from other heads of revenue, he had a total of £3,265,000,000. The resulting excess of expenditure over revenue which would have to be borrowed was £2,300,000,000, some £525,000,000 less than the figure for 1944-45. After emphasising the need for all possible economies in our expenditure, Sir John said he did not propose any major increase or any major reductions in taxation. The burden of the war was still upon us. "But," he went on, "I am convinced that major reductions in taxation must be made as part of a comprehensive review by the Chancellor of the probable

course of post-war expenditure and of our system of taxation as a whole in relation to it. The present level of taxation is unquestionably oppressive to the spirit of enterprise and industry. It is of the first importance that when the compelling incentive of working for victory is no longer present, there should be an early alleviation of the existing heavy obstacles to the normal incentive to work." During the subsequent discussions before the resolutions were agreed to, Sir John disclosed that the current cost of food subsidies was £255,000,000, of which £65,000,000 was in respect of imported food and £190,000,000 in respect of home-produced food. As a result of the decision to dissolve Parliament, Mr. Eden announced on May 29 that it would not be possible to proceed with the Finance Bill in the short time available, and that the Government proposed to substitute for it a shorter measure to cover only those matters on which immediate legislation was regarded as essential. These included the re-imposition of the income-tax and super-tax and the hops duty, the adjustment of the standards of profits for excess profits tax for small businesses, certain proposals relating to the purchase tax, and the clause concerning the fixed duty charge. Motions to effect these intentions were agreed to and the new Finance Bill was brought in. It was read a second time on June 4, when the Chancellor said that tax exemption for Service gratuities would come forward later. The substitute measure was quickly passed through both Houses and received the Royal Assent on June 15.

THE DEFEAT OF GERMANY.—The momentous news of the end of the war with Germany was proclaimed in Parliament on May 8, VE-Day, in the House of Lords by Lord Woolton and in the House of Commons by the Prime Minister. Mr. Churchill repeated his broadcast to the world shortly before the House met, in which he announced that the Act of unconditional surrender had been signed by the German delegates on the previous day and would be ratified in Berlin at midnight. Both Houses adjourned at once, and the Peers proceeded to Westminster Abbey and M.P.s to St. Margaret's "to give humble and reverend thanks to Almighty God for our deliverance from the threat of German domination." Both Chambers on May 15 resolved to present Addresses to the King, conveying their congratulations on the victorious conclusion of the war in Europe and expressing the deep feeling of the country that the King and Queen had contributed by their example and exertions to the constancy of the people. Mr. Churchill in the Commons mentioned that of the 92,000 decorations awarded during the war over 37,000 had been personally presented to recipients by the King. Accompanied by the Queen and the Princesses, the King on May 17 went to the Royal Gallery to receive the Addresses in person. He thanked both Houses in his reply, and expressed his gratitude to the men and women of the armed forces and the merchant navy and to the people at home, mentioning specially the women of the country. "I have done my best," he said, "to discharge my duty as the constitutional sovereign of a free people, and in this task I have been unceasingly helped by the Queen." "The rebuilding of Europe," His Majesty went on, "will bring with it trials and difficulties which can be met and overcome, if we continue to work together in faithfulness and mutual help as we have done during the war. The Grand Alliance of the United Nations which has brought us victory can and must continue to ensure that the peace of the world is not again outraged and destroyed. The purposes for which

the United Nations have been linked in war did not end in victory. Mankind looks forward to a time when all nations, in God's good providence, will be able to work together in mutual confidence for these exalted aims." At the conclusion of the King's speech, Mr. Churchill called for three cheers for their Majesties, which were given with acclaim by Peers and M.P.s.

THE END OF THE COALITION.—The Coalition Government of all Parties which had brought the European War to a successful conclusion came to an end in the last week of May after an existence of five years. In letters to the Labour and Liberal leaders, the Prime Minister proposed that the two Parties should remain in the Coalition until after the conclusion of the Japanese War, and that there should be a referendum on the question of extending the ten years old Parliament for a further period. Both Mr. Attlee and Sir Archibald Sinclair rejected the offer, the former after consultation with the Labour executive, and Mr. Churchill on May 23 tendered his resignation to the King. He was requested to form a new administration, and two days later he announced a Cabinet of 16 members, consisting of Conservatives, National Liberals and men of goodwill of no parties, together with other Ministers not of Cabinet rank. Mr. R. A. Butler succeeded Mr. Bevin as Minister of Labour and National Service, Mr. Brendan Bracken became First Lord of the Admiralty, and Sir Donald Somervell followed Mr. Herbert Morrison at the Home Office. Parliament resumed as arranged on May 28 when business was readjusted to permit the dissolution on June 15, with polling day on July 5 and a delayed counting of votes on July 26 under the arrangement made previously to enable Service votes to be added. As a result of representations a Bill was speedily passed providing for a later date for polling in 23 constituencies where local mass holidays had been fixed. Other measures presented after the break-up of the Coalition and placed on the Statute Book were the Treason Bill, to enable all cases of treason and misprision of treason to be triable in the same way as cases of murder, and a Bill to continue for six months the Emergency Powers (Defence) Acts and such of the regulations made under them which were still in use. Parliament, which had sat under three sovereigns, was dissolved on June 15, the King's Prorogation Speech being read by Royal Commission.

LABOUR GOVERNMENT IN POWER.—The result of the general election was a triumph for Labour, who for the first time secured a majority over all other Parties. Mr. Churchill, who, with Mr. Attlee, had returned from the Big Three Conference at Potsdam to hear the outcome, resigned on the same evening, and the King sent for Mr. Attlee, who accepted the task of forming an administration. Only a few members of the new Government had been announced, when the two Houses met on Aug. 1, with Labour filling the Treasury benches. Leaders on both sides were cheered by their supporters in the Commons, Mr. Churchill being greeted with "For he's a jolly good fellow," to which the Labour M.P.s replied with the "Red Flag." Then the Commons were summoned to the Upper Chamber to hear the King's pleasure that they should elect a Speaker. On their return, Mr. Neil Maclean moved and Sir Hugh O'Neill seconded the re-election to the chair of Colonel Clifton Brown, who expressed his thanks for the honour and was led to the chair by his sponsors and congratulated by Mr. Herbert Morrison, leading the House in the absence at Potsdam of Mr. Attlee, Mr. Churchill and others. The

King's approval of the choice was given on the following day and then after another day for the swearing-in of members, the Commons adjourned until the State Opening.

THE KING'S SPEECH.—By a happy coincidence, the date selected for the inauguration proved to be the first of the Peace Days on which the surrender of Japan was commemorated. A huge crowd assembled on Aug. 15 to greet the King and Queen as they drove to Westminster. In his Speech, the King paid warm tribute to the steady courage and endurance of the armed forces, and declared it to be the firm purpose of the Government to work in the closest co-operation with the Dominions and all peace-loving peoples to attain a world of freedom, peace and social justice so that the sacrifices of the war should not have been in vain. He referred to the Potsdam Conference and the establishment of the Council of Foreign Ministers, and said the Charter of the United Nations would be submitted to Parliament. "The devastating new weapon which science has now placed in the hands of humanity," the Speech went on, "should bring home to all the lessons that the nations of the world must abolish recourse to war or perish by mutual destruction." On the subject of demobilisation, the King said that the Government would take every step to secure that the plans already announced were carried out with the greatest speed, consistent with military commitments and fair treatment to serving men and women. The continuing shortages in the supply of many necessities would call for the same spirit of tolerance and understanding which had been shown during the six years of war. The Government would take up with energy the task of reconverting industry from the purposes of war to those of peace, of expanding export trade, and "of securing by suitable control or by an extension of public ownership that our industries and services shall make their maximum contribution to the national well-being." To promote employment and national development, machinery would be set up to provide for the effective planning of investment, and a measure would be introduced to bring the Bank of England under public ownership. A Bill would also be brought in to nationalise the coal-mining industry, and legislation would be submitted to ensure that during the period of transition from war to peace the necessary powers were available to secure the right use of our commercial and industrial resources and the distribution and fair prices of essential supplies and services. To increase the number of houses available, Ministers would organise the resources of the building and manufacturing industries in the most effective way. Proposals would also be brought forward to deal with the problem of compensation and betterment in relation to town and country planning, to improve the procedure for acquisition of land for public purposes, and otherwise to promote the best use of land in the national interest. Other promised legislation aimed at providing a comprehensive scheme of insurance against industrial injuries, extending and improving the existing scheme of social insurance and establishing a national health service, and repealing the Trade Disputes and Trade Unions Act. The home production of good food would be developed to the fullest possible extent, and a measure would be introduced for the reorganisation of air transport. Finally, the King promised that the Government would do their utmost to promote the early

realisation of full self-government in India. After the delivery of the Speech, both Houses attended Thanksgiving Services for the end of the war with Japan, and on their return adopted Addresses of congratulation to the King on the final victory of the Allies, which were presented to His Majesty in person on Aug. 21. The Addresses in reply to the King's Speech were moved on Aug. 16. That in the Upper Chamber, moved by Lord Latham and seconded by Lord Westwood, was carried on the same day. In the Commons, Maj. John Freeman moved and Mr. F. Willey seconded the Address, each in an able maiden speech. Mr. Churchill followed with a brief statement on the decision at Potsdam to use the atomic bomb which he justified because of its saving of Allied lives. As to the results of the Potsdam Conference, he said it would be wrong and impossible to conceal the divergence of view which existed about the state of affairs in Eastern and Middle Europe. He thought the provisional western frontier for Poland was not a good augury for the future map of Europe. Mr. Churchill said that the Opposition did not propose to join issue immediately about the legislative proposals in the Speech, and promised that if to nationalise the coal mines was the best way of securing a larger supply of coal at a cheaper price, he would approach the plan in a sympathetic spirit. The national ownership of the Bank of England did not in his opinion raise any matter of principle. He had great hopes of the new Parliament, Mr. Churchill concluded, and he would do his utmost to make its work fruitful. Mr. Attlee opened his reply with a generous tribute to Mr. Churchill—"one of the main architects of the Allied victory". His place in history was secure, said the Prime Minister, and although he was no longer at the head of affairs when the Japanese surrendered and final victory came, this really was the outcome of plans made long before under his leadership. In reply to Mr. Churchill's reference to Professor Laski's authority for statements concerning Labour policy, Mr. Attlee assured him that Government policy was laid down by Ministers. He promised quicker demobilisation and said the Government had resolved that there should be no inflation. Mr. Bevin made his first speech in the Commons as Foreign Secretary on Aug. 20 and gave a comprehensive review of the Government's policy, which in the main adhered to the Coalition's views, as Mr. Eden recognised in a speech in which he promised Conservative support. On the following day, Mr. Hugh Dalton, the Chancellor of the Exchequer, outlined the plan for bringing the Bank of England under public ownership, and said that private stockholders would disappear with fair compensation. The Government, he said, would have power of direction and decision, but it was not intended that there should be constant interruption by the Government with the day-to-day working of the Bank. New investments would continue to be guarded in peace as in war by considerations of the public interest. Replying to Mr. Churchill, the Chancellor said that the Government meant to take powers to make permanent their proposal to control investments. He also announced that he would introduce a supplementary Budget in the autumn, but he warned the nation against extravagant expectations of tax relief. The Address was agreed to without a division, and after a two-days debate on the United Nations Charter, which was ratified by both Houses, Parliament adjourned on Aug. 24 until Oct. 9.

ALPHABETICAL LIST OF MEMBERS OF THE HOUSE OF COMMONS.

(Elected July, 1945.)

ABBREVIATIONS.—C. = Conservative; Comm. = Communist; CW. = Common Wealth; Dem. = Democratic Party; I.L.P. = Independent Labour Party; Ind. = Independent; I. Nat. = Irish Nationalist; L. = Liberal; L. Nat. = Liberal Nationalist; Lab. = Labour; Nat. = National; Scott. Nat. = Scottish Nationalist; U.U. = Ulster Unionist; Welsh Nat. = Welsh Nationalist.

NUMBERS AND SYMBOLS.—The numbers preceding the name of the Constituency serve as a key to "The House of Commons by Constituencies" on pp. 319-35. The numbers following the name of the Constituency denote the majority by which each Member was elected at the General Election 1945 or at a subsequent Bye-election.

An asterisk * denotes membership of the last House for the same Constituency; an obelisk † denotes membership for a different Constituency.

THE HOUSE OF COMMONS BY CONSTITUENCIES.

The figures following the name of the Constituency denote the total number of *Electors* in the Parliamentary Division.

ABBREVIATIONS.—C. = Conservative; Comm. = Communist; CW. = Commonwealth; Dem. = Democratic Party; I.L.P. = Independent Labour Party; Ind. = Independent; I. Nat. = Irish Nationalist; L. = Liberal; L. Nat. = Liberal National; Lab. = Labour; Nct. = National; Scott. Nat. = Scottish Nationalist; U.U. = United Unionist; Welsh Nat. = Welsh Nationalist.

SYMBOLS.—An asterisk * denotes membership of the 1st House for the same Constituency; an obelisk † denotes such membership for a different Constituency.

England.

Government and Public Offices

ADMIRALTY.

(see p. 425.)

MINISTRY OF AGRICULTURE AND FISHERIES,

23-25 Soho Square, W.1.

THE MINISTRY OF AGRICULTURE AND FISHERIES was constituted pursuant to the Ministry of Agriculture and Fisheries Act, 1919 (9 and 10 Geo. V. Ch. 97), which amended the Board of Agriculture and Fisheries Act, 1889 to 1909. The Board of Agriculture for Great Britain was established in 1889. By the Board of Agriculture and Fisheries Act of 1903, the duties of the Fisheries Department of the Board of Trade were transferred to the Board of Agriculture, the designation of which was at the same time altered. The expression "agriculture" is defined to include "horticulture."

The administration of the *Ordnance Survey* and of *New Gardens* is under the control of the Ministry.

Minister of Agriculture and Fisheries, THE RT. HON. TOM WILLIAMS, M.P. £5,000

Private Sec., J. Hensley.

Assistant Private Secs., I. Barrah; Miss I. J. B. Snatt.

 National Institute of Agricultural Engineering, Director, S. L. Wright, M.C., F.R.C.V.S., D.V.S.M. £1,250 to £1,500
 Principal Scientific Officers, J. Bradley, W. H. Cashmore, B.A., N.D.A. £850 to £1,050
 Senior Scientific Officers, J. K. Gaunt, B.Sc., N.D.A.; H. J. Hamblin, B.A.; W. J. West, B.A., Dip. Agric. (Cantab.) £680 to £800
 Records Officer, J. H. Blackaby, M.Sc. £625
 Chief Inspector of Fisheries, J. Thomson, O.B.E. £900 to £1,050

Deputy Chief Inspector of Fisheries, *J. le G. Lacy, M.C. £800 to £900
 Inspector for Salmon and Freshwater Fisheries, T. E. Pryce-Tannat £550 to £825
 District Fishery Officers, G. T. Atkinson (*temp.*); Lieut. Comdr. R. H. C. F. Frampton, R.N. (ret.); W. J. Gadd; T. S. Leach, M.C.; *G. F. Pyne £550 to £775

Director of Fishery Investigations, E. S. Russell, O.B.E., M.A., D.Sc., F.L.S. £1,050 to £1,250
 Principal Naturalists, *G. M. Graham, M.A., F.L.S.; R. E. Savage, A.R.C.S., D.L.C. £850 to £1,050
 Senior Naturalists, W. C. Hodgson, D.Sc.; H. P. Sherwood, B.A.; *R. S. Wimpenny, M.Sc. £680 to £800

Agricultural Lime Department.

Chief Technical Officer, *J. A. Birch, B.Sc., N.D.D. £634 to £847
 Technical Officers, *J. Archer, B.Com.; *E. M. Clark, M.D.A. (*temp.*); *H. M. David, M.Sc., B.Sc. (Agric.), Ph.D. (*temp.*); *H. C. Doynne, A.L.C., Dip. Econ. (*temp.*); *J. C. French, M.A. (*temp.*); *A. E. Harris, B.Sc.; *D. C. E. Johns, B.Sc., N.D.A., N.D.D. (*temp.*); *A. C. Middleton, B.Sc.; A. R. G. Sentance, B.Sc. (Agric.) £515 to £934

Agricultural Wages Board.

Chairman, Sir Francis L. C. Floud, K.C.B., K.C.S.I., K.C.M.G.
 Secretaries, R. E. Stanley, I.S.O., M.B.L.; R. A. German.

Herring Industry Board.

Chairman, Frederick A. Bell, M.C.

ROYAL BOTANIC GARDENS,

Kew.

Open daily, 10 a.m. Bank Holidays free, 10 to Sunset or 8 p.m. Houses, 1 p.m. to dusk or 5 p.m. (week-days), 1 p.m. to dusk or 6 p.m. (Sundays). Closed on Christmas Day. In 1944 there were 911,494 visitors to Kew Gardens.

Director of Royal Botanic Gardens and Technical Adviser in Botany, E. J. Salisbury, C.B.L., D.Sc., F.R.S. £1,400

Assistant Director, J. S. L. Gilmour, M.A. £738 to £953

Economic Botanist, Sir Geoffrey Evans, C.I.E. £750
 Keeper, Herbarium & Library, W. B. Turrill, D.Sc. £738 to £953

Deputy Keeper, Miss E. M. Wakefield, M.A. £634 to £847

Curator of Gardens, W. M. Campbell £456 to £634

Keeper of Museums, J. Hutchinson, LL.D. £634 to £847

Assistant Keeper, Jodrell Laboratory, C. R. Metcalfe, M.A., Ph.D. £337 to £738

Botanist, F. Ballard, B.Sc.; A. A. Bullock, B.Sc.; R. W. G. Dennis, B.Sc., Ph.D.; F. N. Howes, D.Sc.; C. E. Hubbard; R. Melville, B.Sc., Ph.D.; E. W. C. B. Milne-Redhead, B.A.; V. S. Summerhayes, B.Sc.; N. Y. Sandwith, M.A.; H. K. A. Shaw, B.A. £337 to £738

Botanists (Women), Mrs. M. L. Sprague £337 to £590

ORDNANCE SURVEY DEPARTMENT,

Chessington, Surrey.

Director-General, Maj.-Gen. G. Chettham, D.S.O., M.C.

Deputy Director-General, Brig. E. R. L. Peake, M.C. Directors:—

Map Publication and Production, Brig. E. R. L. Peake, M.C.

Field Survey, Brig. R. L. Brown, C.B.E.

Establishment and Finance, S. A. Smith.

Deputy and Assistant Directors, Col. F. O. Metford, M.B.E.; Col. K. M. Papworth, O.B.E., M.C.; Col. T. M. M. Penney; Col. E. B. Elkington;

Lt.-Col. H. A. L. Shewell, O.B.E., R.E.; Lt.-Col. E. H. Thompson, O.B.E., R.E.; F. G. C. Bentley.

Other Officers:—

Chief Clerk, *A. H. Dallison.

Research Officer, H. L. P. Jolly, M.A.

Archæology Officer, SO. G. S. Crawford, B.A., F.S.A.

* Acting.

§ Seconded to other Government Offices.

AGRICULTURAL RESEARCH COUNCIL,

6A, Dean's Yard, Westminster, S.W.1.

(Incorporated by Royal Charters July 23, 1931, and March 24, 1933.)

The creation of the Agricultural Research Council was designed to complete the organisation

for the scientific supervision of Government-aided research, other spheres of which were covered by the Medical Research Council and the Department of Scientific and Industrial Research. Besides advising the Development Commissioners and the Agricultural Departments upon the application of practically all moneys voted by Parliament for the furtherance of agricultural research, the Council are empowered themselves to promote research with the aid of funds voted by Parliament for Scientific Investigation and of moneys received from private sources, societies, marketing boards, &c. Grants are also made to enable special agricultural investigations to be undertaken. Reports and publications of the Council are issued through H.M. Stationery Office and are obtainable from any bookseller.

Council. The Earl De La Warr, P.C. (*Chairman*); Prof. F. T. Brooks, M.A., LL.D. F.R.S.; Prof. J. de Burgh Daly, B.Ch., M.A., M.D., F.R.S.; Prof. Sir Frank L. Engledow, C.M.G., M.A., B.Sc.; Prof. J. Gray, M.C., M.A., Sc.D., LL.D., F.R.S.; Prof. D. Kellin, M.A., Sc.D., F.R.S.; Maj. J. Keith, C.B.E.; Prof. T. G. B. Osborn, M.A., D.Sc.; J. L. Simonsen, D.Sc., F.R.S.; Prof. J. A. Scott-Watson, M.C., M.A.; W. J. Wright.

Secretary. J. C. F. Fryer, O.B.E., M.A.

Administrative Secretary. E. H. E. Havelock, C.B.E., F.R.S.E.

Assistant Secretaries. F. R. W. Jameson, D.S.O., M.C.; S. Stagg.

Senior Staff Officers. E. Fleming; P. A. C. Thorne.

Field Station.

Compton, near Newbury, Berks.

Director. W. S. Gordon, Ph.D., M.R.C.V.S., F.R.S.E.

EXECUTIVE COUNCIL OF THE IMPERIAL AGRICULTURAL BUREAU,

2 Queen Anne's Gate Buildings, S.W.1.

This Inter-Imperial organisation, composed of nominees of the Governments of the United Kingdom, the Dominions and India, and of the Colonial Office, was set up in 1920 to administer a number (8) of bureaux organised to act as clearing houses of information on research in eight specialised fields of agricultural science, and financed from a common fund provided by the Governments of the Empire. The Governments of the Empire instructed it in 1932 to supervise the administration and finances of the Imperial Institute of Entomology and the Imperial Mycological Institute, and in 1937 to organise bureaux for Forestry and Dairy Science. The Annual Reports of the Council are submitted to each of the Governments through their several members on the Council. The bureaux are attached to appropriate research institutions, but are distinct from them.

Chairman. G. H. Creasy, C.M.G., O.B.E.

Vice-Chairman. Lt.-Col. J. G. Robertson.

Secretary. Sir David Chadwick, K.C.M.G., C.S.I., C.L.E.

Bureaux.

Soil Science. Rothamsted Experimental Station, Harpenden, Herts.—**Director.** G. V. Jacks, M.A., B.Sc.

Animal Health. Veterinary Laboratory, New Haw, Weybridge, Surrey.—**Director.** W. A. Pool, M.R.C.V.S.

Animal Nutrition. Rowett Research Institute, Bucksburn, Aberdeen, Scotland.—**Director.** I. Leitch, M.A., D.Sc.

Animal Breeding and Genetics. Institute of Animal Genetics, King's Buildings, West Mains Road, Edinburgh, 9, Scotland.—**Director.** J. E. Nicholls, M.Sc., Ph.D., F.R.S.E.

Plant Breeding and Genetics. School of Agriculture, Downing Street, Cambridge, Cambs.—**Director.** P. S. Hudson, Ph.D.

Pastures and Fodage Crops. Welsh Plant Breeding Station, Penllangra, Aberystwyth, Wales.—**Director.** R. O. Whyte, B.Sc., Ph.D.

Horticulture and Plantation Crops. East Malling

Research Station, East Malling, Nr. Maidstone, Kent.—**Director.** D. Akenhead, M.A., B.Sc.

Agricultural Parasitology (Helminthology). Institute of Agricultural Parasitology, Winches Farm Drive, Hatfield Road, St. Albans, Herts.—**Director.** Prof. R. T. Lelper, C.M.G., M.D., D.Sc., F.R.S., I.R.C.P.

Forestry. Imperial Forestry Institute, 39, Museum Road, Oxford, Oxon.—**Director.** J. W. B. Siam, B.Sc. IN F., M.F.

Dairy Science. National Institute for Research in Dairying, Shinfield, nr. Reading.—**Director.** W. G. Sutton, M.Sc.

Imperial Institute of Entomology.

Natural History Museum, S.W.7.

Director. S. A. Neave, C.M.G., O.B.E., D.Sc.

Imperial Mycological Institute.

Ferry Lane, Kew, Surrey.

Director. S. P. Wiltshire, M.A., D.Sc.

AIR MINISTRY.

(see pp. 447-448).

MINISTRY OF AIRCRAFT PRODUCTION.

66 to 72 Gower Street, W.C.1.

Minister. THE RT. HON. JOHN WILMOT, M.P.

(Also Minister of Supply)

Principal Private Secretary. H. Bailey.

Parliamentary Secretary. A. Woodburn, M.P.

Private Secretary. Miss H. Waugh.

Chief Executive. E. N. Plowden, M.I.C.E.

Assistant Chief Executive. Air Vice-Marshal W. Elliott, C.B., C.B.E., D.F.C.

Aircraft Supply Council.

The Rt. Hon. John Wilmot, M.P.; A. Woodburn, M.P.; E. N. Plowden, M.I.C.E.; O. S. Franks, C.B.E.; Air Marshal Sir Ralph S. Sorley, K.C.B., O.B.E., D.Sc., D.F.C.; Carleton Dyer; Rear Admiral M. S. Slattery, R.N.; Sir W. Lindsay Scott, K.B.E., D.S.C.; F. J. E. Brake; Air Vice-Marshal W. Elliott, C.B., C.B.E., D.F.C.

Department of the Permanent Secretary.

Permanent Secretary. O. S. Franks, C.B.E.

Second Secretary. Sir W. Lindsay Scott, K.B.E., D.S.C.

Under Secretaries. E. B. Bowyer; E. L. Pickles, C.B., O.B.E.

Principal Assistant Secretaries. G. Calder; H. R. Camp; F. C. How; F. C. Musgrave; W. Strath; W. D. Wilkinson, C.B.E., D.S.O., M.C. (*Principal Establishment Officer*).

Assistant Secretaries. R. R. Abraham, M.C., M.M.; R. E. Bone; A. L. Cadman; H. H. Chapman; S. S. Cherry; L. H. Curzon; H. I. Downes; R. S. Edwards; J. K. Horsfield; S. Hudson; L. T. F. Little; C. R. Malcolm; N. V. Meeres; D. W. Mitchell.

Directors of Contracts. A. C. Boddis, C.M.G.; W. F. Jenkins, C.B.E.

Principal Deputy Director of Contracts. S. Davey, M.B.E.

Deputy Directors of Contracts. C. Bennett, M.B.E.; A. K. Davis, M.C.; W. C. Fenwick, M.B.E.; D. W. Howard; H. J. Rabbitt, I.S.O.; L. M. Snelling.

Chief Superintendent of Technical Costings. A. J. Camm, M.B.E.

Principal Technical Costs Officer. W. A. James, O.B.E.

Principal Patents and Awards Officer. F. H. Coffey.

Director of Accounts. H. P. Bruckshaw, O.B.E., A.C.A.

Deputy Directors of Accounts. W. Gairns, O.B.E.; G. W. Hearn.

Controller of Construction and Regional Services. F. J. E. Brake.

Director-General of Regional Organisation (Production and Capacity). H. Russell.

Directors of Labour, H. R. Chapman; J. R. J. Passmore, C.B.F.
Director of Regional Organisation (Production and Capacity), C. C.iffan.
Deputy Director of Airfield Planning and Organisation, T. Lawrence.
Deputy Director of Machine Tools, A. A. Twiddy.
Dispersal of Factories Organisation, I. O. Corry Ware.

Department of Production and Inspection.

Director-General of Aeronautical Inspection, G. Manning.
Deputy Director-General of Aircraft Production, L. W. Warner, A.F.R.Ae.S.
Deputy Director-General of Engine Production, P. A. Cooke, O.B.F., M.C.
Deputy Director-General of Equipment Production, G. MacDonald, O.B.E., B.Sc., A.M.Inst.C.E., M.I.A.E., M.I.M.
Director-General of Repair and Maintenance, Air Vice-Marshal H. H. McL. Fraser, C.B.
Director-General of Storage and Breakdown, Air Vice-Marshal Sir George Laing, K.C.B., C.B.F. (ret.).
Deputy Director-General of Storage and Breakdown, J. E. Keel.
Controller of Light Metals, C. G. McAuliffe.
Deputy Controller of Light Metals, G. A. Anderson.
Principal Assistant Controller of Light Metals, G. T. Cutler.
Directors of Aeronautical Inspection, T. Rowntree, A.M.I.Mech.E., A.F.R.Ae.S., Capt. S. G. Young, M.B.E., A.C.G.I., A.M.I.Mech.E.
Director of Aircraft Production, J. A. C. Manson, B.Sc., A.F.R.Ae.S.
Director of Aircraft Production (Bombers), T. T. Jarnes.
Director of Aircraft Production (Light and Naval), C. E. R. Oman.
Director of Armament Production, W. T. Gemmell, B.Sc., A.C.G.I.
Director of Balloon Production, Sqn.-Ldr. S. Nixon, C.B.F.
Director of Engine Production, W. A. Sales, O.B.E.
Director of Instrument and Aircraft Equipment Production, W. R. McGaw, B.Sc.
Director of Marine Craft Development and Production, Vice-Admiral F. A. Somerville, D.S.O. (ret.).
Director of Materials Production, P. May, B.A.
Director of Production, Canadian and American, Air Commodore C. S. Vincott.
Directors of Repair and Maintenance, Air Commodore G. W. Brinkshaw; Air Commodore K. L. Boswell, C.B.E.
Director of Storage and Breakdown, E. H. Lennard.
Deputy Director of Production of Engine Accessories, W. A. Javenport.
Deputy Director of Standardisation of Aircraft Equipment, G. H. Nash, C.B.E.

Department of the Controller of Research and Development.

Deputy Controller of Research and Development, Air Vice-Marshal R. O. Jones, C.B., A.F.C.
President of the Air Armament Board, Air Commodore P. H. Huskinson, M.C., C.B.E.
Director of Armament Development, Air Commodore, J. G. Franks.
Director for Construction of Research Facilities, Major G. P. Bulman, C.B.E., B.Sc., F.R.Ae.S., D.I.C., A.C.G.I.
Director of Engine Development, Air Commodore F. R. Banks, O.B.E.
Director of Marine Craft Development and Production, Vice-Admiral F. A. Somerville, D.S.O. (ret.).
Director of the Royal Aircraft Establishment, W. S. Farren, C.B., M.B.E., M.A., F.R.Ae.S.
Director of Scientific Research, B. Lockspeiser, M.A., F.R.S.
Director of Technical Development, N. E. Rowe, C.B.E., B.Sc., D.I.C., A.C.G.I., F.R.Ae.S.
Chief Overseer, Air Commodore, F. Kirk, C.B.E.

Department of the Controller of Communications Equipment.

Controller of Communications Equipment, Carleton Dyer.
Director of Communications Development, Air Commodore W. C. Cooper.
Director of Naval Air Radio, Captain B. R. Willett, C.B.E., D.S.C., R.N.
Director of Radio Production, C. W. Abell.
Deputy Director of Communications Equipment, L. W. Norden.
Deputy Directors of Component Production, D. N. Truscott, J.Sc., R.D., W. F. Campling.
Deputy Director of Radio Repairs, Group Captain R. C. Wainbrough.

Department of the Chief Naval Representative.
Chief Naval Representative, Rear Admiral M. S. Slatery, R.N.
Deputy Chief Naval Representative, Captain A. C. G. Eimcn, R.N.
Assistant Chief Naval Representatives, Commander R. E. L. Kearney, R.N.; Commander A. P. Targett-Adams, R.N.

COLLEGE OF ARMS OR HERALDS' COLLEGE,

Queen Victoria Street, E.C.4.

(Hours : 10 to 4.)

Earl Marshal, His Grace the Duke of Norfolk, K.G., P.C.

Kings of Arms.

Garter, Sir Algar Henry Stafford Howard, K.C.V.O., C.B., M.C.
Clarenceux, Sir Arthur William Stuart Cochrane, K.C.V.O.
Norroy (and Ulster and Earl Marshal's Secretary), Sir Gerald Woods Wollaston, K.C.B., K.C.V.O., F.S.A.

Six Heralds.

Lancaster, Archibald George Blomefield Russell, C.V.O., F.S.A.
Somerset (and Registrar), Hon. George Rothe Belieu, M.V.O.
Chester, John Dunamace Heaton-Armstrong, M.V.O.
Windsor (and acting Registrar), Alfred Trego Butler, M.V.O., M.C., F.S.A.
York, Aubrey John Toppin, F.S.A.
Richmond, Anthony Richard Wager, F.S.A.

Four Pursuivants.

Bluemantle, Richard Preston Graham-Vivian, M.C.
Rouge Dragon (vacant).
Rouge Croix (vacant).
Portcullis (vacant).

COURT OF THE LORD LYON.

H.M. Register House, Edinburgh.

Lord Lyon King of Arms, Thomas Innes of Learney, F.S.A.Scot., Advocate.....£738

Three Heralds (£25 each).

Albany, Sir Francis James Grant, K.C.V.O., LL.D., W.S., F.S.A.Scot.

Marchmont, Lt.-Col. John William Balfour Paul, D.S.O.

Rothsay, Lt.-Col. H. A. B. Lawson, F.S.A. Scot.

Three Pursuivants (£16 13s. 4d. each).

Dingwall, Major Charles Ian Fraser of Keelie.
Carrick, Alexander James Stevenson, LL.B., Adv.
Ulincorn, Lt.-Col. Gordon Dalryell of the Binns, C.I.E.

Lyon Clerk and Keeper of Records, Harold Andrew Balvaird Lawson £337
Procurator-Fiscal, Malcolm Robertson MacGregor, W.S.
Herald Painter, H. Lewis Gordon.

languages, including English, to audiences overseas, as follows:—

The *European Services*, broadcasting on long, medium and specially beamed short waves, for over 30 hours a day, in Albanian, Bulgarian, Czech, Danish, Dutch, English, Finnish, Flemish, French, German, Greek, Hungarian, Italian, Luxembourg Patois, Norwegian, Polish, Portuguese, Roumanian, Serbo-Croat, Slovak, Slovene, Spanish and Swedish.

The *Overseas Services*, broadcasting on short waves, for over 70 hours a day, to audiences throughout the world in English, Afrikaans, Bengali, Burmese, Cantonese, Hindustani, Kokien, Japanese, Kuoyu, Malay, Marathi, Thai, Sinhalese, Tamil, Arabic, Persian, Turkish, Greek for Cyprus, Maltese, Spanish for Spanish America, Portuguese for Brazil, and French.

The following independent transmissions make up the *Overseas Services*, broadcasting in English and other languages as above:—

Pacific Service, 4 hours; *African Service*, 5½ hours; *North American Service*, 16½ hours; *General Overseas Service*, 24 hours (including *General Forces Programme*); *Eastern Service*, 6½ hours; *Near East Service*, 5 hours; *Latin American Service* in Spanish, 5½ hours; in Portuguese, 4½ hours; special *Services* for Cyprus and Malta, 15 minutes.

In addition to the 10 news bulletins transmitted every day by the *Home Service* and *Light Programme*, 33 news bulletins go out daily in English as follows:—

European Service, 23; *Pacific Service*, 2; *North American Service*, 4; *General Overseas Service*, 10; *African Service*, 3; *Eastern Service*, 1.

Chairman, Sir Allan Powell, G.B.E., D.L. £3,000
Vice-Chairman, C. H. G. Mills, D.S.O., M.C. £1,000
Other Governors, Lieut.-Col. Sir Ian Fraser, C.B.E., M.P.; Lady Violet Bonham-Carter; James Joseph, M.P.; Hon. Harold G. Nicolson, C.M.G. . . . each £1,000
Director-General, W. J. Haley.

Deputy Director-General, Sir Noel Ashbridge, B.Sc. M.Inst.C.E., M.I.E.E.

Senior Controller, B. E. Nicolls, C.B.E.

Controllers:—

Finance, T. Lochhead, C.B.E.

Engineering, H. Bishop, C.B.E., M.I.E.E.

Entertainment, R. J. F. Howgill (acting).

Talks, R. A. Rendall.

BRITISH OVERSEAS AIRWAYS CORPORATION,

Airways House, S.W.1.

British Overseas Airways Corporation, established in 1939 under the British Overseas Airways Act of that year, acquired on April 1, 1940, the air transport undertakings of Imperial Airways Limited and British Airways Limited, which had been at the disposal of the Secretary of State for Air since the outbreak of war. The objects of the Corporation are to secure the fullest development, consistent with economy, of efficient overseas air transport services and, during the war, to operate such services as the Secretary of State for Air shall require. The capital of the Corporation consists of £4,250,000 3 per cent. Airways Stock 1960-70, the fixed interest being guaranteed by the Treasury. The stock carries no voting rights and is owned by public bodies nominated by H.M. Government. During the war period the operations of the Corporation are financed by H.M. Treasury and the Corporation accounts to the Secretary of State for Air for all revenue and expenditure in connexion with them. The traffic carried by the Corporation is determined by H.M. Government, which has exclusive control over priorities. To a preponderating extent the loads consist of official passengers and goods and of troop and other mails. The Members of the Corporation are appointed by the Secretary of State for Air.

Under the *Ministry of Civil Aviation Act, 1945*, the functions of the Secretary of State for Air in relation to the Corporation were transferred to the Ministry of Civil Aviation.

Chairman, The Viscount Knollys, K.C.M.G., M.B.E., D.C.

Deputy Chairman, Sir Harold G. Howitt, D.S.O., M.C.

COAL COMMISSION.

(Constituted under the Coal Act, 1938.)

Office, 29 Chester Square, S.W.1. (Sloane 0808.)
Scottish Office, 1 Eglinton Crescent, Edinburgh, 12

The Coal Commission have vested in them, as from July 1, 1942, the ownership of all coal (and certain associated minerals and rights) and, subject to the provisions of the Act, are charged to exercise their functions as owners "in such manner as they may think best for promoting the interests, efficiency and better organisation of the coal-mining industry." The aggregate amount of compensation to be paid by them for coal and coal-rights is fixed by the Act at £66,450,000, with additional sums for other associated property and rights; and the Commission are entitled by the Act to borrow up to £76,450,000 for the payment of compensation and other expenses payable by them. The valuation of separate coal holdings (as registered under the Coal (Registration of Ownership) Act, 1937) is being carried out, in the manner provided by the Act, by Valuation Boards appointed by the Ministry of Fuel and Power and payment of the compensation has been completed. The Commission is also charged with duties of promoting amalgamation of colliery-undertakings in any area in which they consider the number of separate undertakings is so great as to be detrimental to the efficient working, treating or disposing of coal.

Chairman, Sir Ernest A. Gowers, K.C.B., K.B.E.
Deputy Chairman (vacant).
Other Members, W. M. Coddington, M.C.; Lt.-Col. J. A. S. Rison, D.S.O., O.B.E., M.C., T.D.; J. Beatty, Secretary & Controller, C. B. Hurst, C.B., O.B.E.

COLONIAL INCOME TAX OFFICE

5 Millbank, Westminster, S.W.1.

The Official Representative is appointed by the Secretary of State for the Colonies and acts in respect of those Colonies, Protectorates, etc., which have decided to avail themselves of his services in connexion with Colonial Income Tax and Excess Profits Tax.

Official Representative, J. A. Hill £1,250

COMMISSIONERS OF CROWN LANDS,

THE CROWN LANDS.—The Land Revenues of the Crown in England and Wales have been collected on the public account since 1769, when George III. surrendered them and received a fixed annual payment of Civil List. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1945, the total Receipts by the Commissioners were £1,906,945, of which amount £4,403 was from the Mines. The Expenditure (including Property Tax allowed) was £911,776. The sum of £980,000 was paid to the Exchequer in 1944-45 as Surplus Revenue, being a net sum from which no deductions have to be made for administration.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been collected and administered by the Irish Free State (Eire).

The Land Revenues in Scotland were transferred to the Commissioners in 1833.

Commissioners (ex-officio). The Minister of Agriculture and Fisheries and the Secretary of State for Scotland unpaid
Permanent Commissioner, O. S. Cleverly, C.B., C.V.O. £2,200
Assistant Commissioner, J. A. Hillman £1,000 to £1,300

Heads of Branches. W. H. Grout, M.B.E.; F. E. J. Behn £700 to £860
Assistant Heads of Branches, R. Roddis; G. D. Shoosmith; W. Pavay; T. J. Lester; E. J. Pedlar; C. J. Heather; R. E. Mildren; C. F. Ellwood £550 to £650

Accountant & Receiver-General. T. R. Oswin £700 to £860
Solicitor, England, Sir Denys Stocks, C.B., O.B.E.
Solicitor, Scotland, T. Menzies McNeill, W.S.

Windsor Parks and Woods.

Deputy Ranger and Deputy Surveyor, E. H. Savill, M.V.O., M.C., F.S.I.

THE DUCHY OF CORNWALL,

Buckingham Gate, S.W.1.

The Duchy of Cornwall was instituted by Edward III. in 1337 for the support of his eldest son (afterwards created Prince of Wales), and since that date the eldest son of the Sovereign has succeeded to the Dukedom by inheritance.

The Council.

The Earl of Radnor (*Lord Warden of the Stannaries*); Sir Edward Robert Peacock, G.C.V.O. (*Receiver-General*); The Earl Fortescue, O.B.E., M.C.; Adm. Sir Lionel Halsey, G.C.M.G., G.C.V.O., K.C.I.E., C.B.; The Viscount Clifden, M.V.O.; Sir Walter T. Monckton, K.C.M.G., G.C.V.O., M.C., K.C. (*Attorney-General of the Duchy*); R. Clive W. Burn, C.V.O. (*Sec. and Keeper of Records*).

Other Officers of the Duchy of Cornwall.

Auditor, Sir Laurence E. Halsey, K.B.E.
Solicitor, R. C. W. Burn, C.V.O.
Asst. Secretary, P. G. T. Kingsley.
Deputy Receiver, C. A. Conyard, M.V.O.
Sheriff (1945-46), Kenneth James Acton Davis.

THE DUCHY OF LANCASTER,

Lancaster Place, Strand, W.C.2.

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. Edward III. erected Lancashire into a County Palatine for his son John of Gaunt, Duke of Lancaster, in 1377.

The revenue of the Duchy of Lancaster was £200,000 in 1938 and amounted to £795,400 in the year ended December 31, 1944, including Rents and Profits of Courts, £84,300 and Royalties and Dues £10,100. The sum of £85,000 was paid over to the Keeper of His Majesty's Privy Purse.

Chancellor of the Duchy of Lancaster, J. B. HYND, M.P. £2,000

Private Sec., Miss E. Birbeck.
Vice-Chancellor, Sir John Bennett.
Attorney-General, Sir Herbert Cunliffe, K.C.
Receiver-General, Major Sir Ulric Alexander, K.C.V.O., C.M.G., O.B.E.
Clerk of Council and Keeper of Records, Norman R. C. Warwick, C.V.O., O.B.E.
Surveyor-General, Arthur Garrard.
Solicitor, K. R. E. Taylor.
Chief Clerk, R. Somerville.
Auditor, S. L. Forwood.
Registrar, Preston District, J. M. Worthington.
Do. Manchester District, Harold Roberts.
Do. Liverpool Dist., Harold Roberts.

THE COUNTY PALATINE OF DURHAM.

It is uncertain when "Palatine" privileges were first exercised in the County of Durham, as no formal creation of the Palatinate by charter or deed appears to have ever been made. From the founding of the See of Lindisfarne, out of which the bishopric and palatinate of Durham arose, the Bishops received large grants of lands, with extensive immunities; and Guthred, king of Northumbria, and Alfred the Great appear to have confirmed the grant to the See of the whole of the land between the rivers Tyne and Wear. There is no evidence of the exercise of palatine privileges by the Bishops prior to the Norman Conquest, but it is probable that these were acquired in the reign of the Conqueror, and they were exercised by the Prelates until resumed by the Crown in 1836. Palatine counties are understood to have been erected for the defence of neighbouring kingdoms against the Welsh and Scots, and were in reality self-contained kingdoms in alliance with their creator. The ancient customs of the County Palatine of Durham are in some measure retained, the administrative authority being exercised on behalf of the Crown.

Chancellor, C. Paley Scott, K.C.
Attorney-General, G. H. B. Streetfield, K.C.
Registrar of Chancery Court, A. O. Smith.
Steward & Clerk of Halmotes, J. R. Brown.
Deputy Steward, A. F. C. Ruston.
Registrar of the Halmotes, G. M. Sladden.
Mining Surveyor, R. F. Barrett.
Receivers, Smith, Gore & Co.

ECCLESIASTICAL AND CHURCH ESTATES COMMISSIONERS,

1 Millbank, Westminster, S.W.1.

(Hours 9 to 6.)

The Ecclesiastical Commissioners were incorporated in 1836, their constitution being amended in 1840-1 and 1850. The main function of the Commission (whose members are given below)

is the management of Estates of the Church in order to endow or augment benefices, &c. and to exercise administrative duties in relation to ecclesiastical parishes and benefices.

MINISTRY OF EDUCATION,

Belgrave Square, London, S.W.1.

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899, established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Educa-

tion Act of 1944 established the Ministry of Education. The cost of administration was estimated at £517,655 in the Financial Year 1945, with £472,920 for Inspection and Examination.

Minister of Education, THE RT. HON. ELLEN WILKINSON, M.P. £5,000

Private Sec., A. A. Part, M.B.E.

CENTRAL ELECTRICITY BOARD,

(Established under the Electricity (Supply) Act, 1926.)

Office, Trafalgar Bldgs., 1 Charing Cross, S.W.1.

The Board are charged with the duty of controlling the production of electricity and supplying authorised undertakers in Great Britain. Their chief functions are to construct main transmission lines (commonly known as "The Grid") to concentrate generation at standard frequency in the most efficient stations ("Selected Stations") to control the operation of the stations, and to supply electricity in bulk for distribution. The "Grid" scheme embraces the whole of Great Britain, except the north of Scotland. The borrowing powers of the Board are £70,000,000, and issues of stock have been made, viz. (other than under the Civil Defence Act, 1939): £3,000,000 (4%) in May, 1929, £7,000,000 (5%) in January, 1930, £6,000,000 (4½%) in Nov., 1930, £3,000,000 (5%) in Oct. and Nov., 1931, £7,000,000 (5½%) Feb., 1932, £10,000,000 (4½%) in June, 1932, £8,000,000 (3½%) in June, 1933, £6,000,000 (3½%) in Oct., 1934, and £3,500,000 (3½%) in Feb., 1936.

Chairman. Harold Hobson.

Other Members. The Lord Barnby, C.M.G., C.B.E., M.V.O., Sir Percival Bower, M.B.E.; Frank Hodges; R. P. Sloan, C.B.E.; Sir Duncan Watson; Sir R. L. Wedgwood, Bt., C.B., C.M.G.; W. R. Whigham.

General Manager. Sir Johnstone Wright.

Chief Engineer. J. Hackings.

Commercial Manager. E. R. Wilkinson.

Chief Accountant. D. W. Coates, C.B.E.

Secretary. O. A. Sherrard.

Solicitor. C. L. Poyser.

EXCHEQUER AND AUDIT DEPARTMENT.

Victoria Embankment, E.C.4.

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of the Exchequer General of the Receipt and Issue of the Comptroller and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the Two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer he authorises all issues from the Exchequer satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts he is charged with the duty of

examining on behalf of the House of Commons the accounts of expenditure out of monies provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

ROYAL FINE ART COMMISSION.

22A Queen Anne's Gate, S.W.1.

Appointed in 1924 "to enquire into such

questions of public amenity or of artistic impor-

tance as may be referred to them from time to time

by any of our Departments of State, and to report

thereon to such Department; and, furthermore,

to give advice on similar questions when so

requested by public or quasi-public bodies, where

it appears to the said Commission that their assis-

tance would be advantageous." In August, 1933,

a Royal Warrant extended the Terms of Refer-

ence of the Commission—"so that it shall also be

open to the said Commission, if they so desire, to

call the attention of any of Our Departments of

State, or of the appropriate public or quasi-public

bodies, to any project or development which in

the opinion of the said Commission may appear to

affect amenities of a national or public character."

FOREIGN OFFICE,

Downing Street, S.W.1.

The Secretaryship of State for Foreign Affairs was created in 1782, superseding the ancient Secretary for the Northern Department of Europe (as the Officer had been called since 1688). He is assisted by a Minister of State, three Under-Secretaries (two Parliamentary, the other Permanent), two Deputy Under-Secretaries, and seven Assistant Under-Secretaries, two Principal Assistant Secretaries, Legal Advisers, twenty Counsellors, eight Assistant Secretaries, a Librarian, and a staff of Clerks. The chief functions in addition to the formal duties, are receiving and answering communications from individuals or other Government Departments, from Diplomatic and Consular Agents of this country, or others, and in determining the policy of the country towards Foreign Powers. The administrative expenses of the Foreign Office were estimated at £2,867,787 in 1945.

Principal Secretary of State for Foreign Affairs, THE RT. HON. ERNEST BEVIN, M.P. £5,000

FORESTRY COMMISSION,

25 Savile Row, W.1.

Temporary Address, Camp House, Promenade, Bristol, 8.

The Forestry Commissioners, a Body Corporate, are appointed quinquennially under the Forestry Acts, 1919 to 1945. The Commissioners are charged with the general duty of promoting the interests of forestry, the development of afforestation and the production and supply of timber in Great Britain. Including the former Crown Woods, transferred to the Commission in 1924, the Department have acquired over 1,270,000 acres of land (60 per cent. are plantable), and they have planted over 462,000 acres. Grants are provided by the Commission in respect of afforestation of land belonging to private individuals and Local Authorities.

REGISTRY OF FRIENDLY SOCIETIES (CENTRAL OFFICE) AND OFFICE OF THE INDUSTRIAL ASSURANCE COMMISSIONER.

17 North Audley Street, W.1.

A Barrister was appointed in 1883 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created, consisting of the Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Acts, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Workmen's Compensation Acts, the Scientific Societies Act, the Trustee Savings Banks and Post Office Savings Bank Acts, the Loan Societies Act, the Shop Clubs Act and the Superannuation and other Trust Funds (Validation) Act. Under the Industrial Assurance Act, 1923, the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner.

GOVERNMENT HOSPITALITY FUND,

Parliament Square House, Parliament St., S.W.x.

Instituted in 1908 for the purpose of organising official hospitality on a regular basis, with a view to the promotion of international goodwill.

Minister in Charge, GEORGE TOMLINSON, M.P.
Secretary, Col. Sir Eric Crankshaw, K.C.M.G., M.B.E.

MINISTRY OF HEALTH,

Whitehall, S.W.x.

The Ministry of Health was established by the Ministry of Health Act, 1919, to exercise in England and Wales functions with respect to health and local government which, in the main, were previously exercised by the Local Government Board and the National Health Insurance Commissions. The chief matters with which the Ministry is concerned are—(a) General health questions, including international health work. (b) General supervision of the services administered by local authorities, in particular public health, housing, slum clearance, public assistance and district audit. (c) General supervision of the administration of the National Health Insurance Scheme by Approved Societies and Local Insurance Committees. (d) The administration of the Widows', Orphans' and Old Age Contributory Pensions Scheme, and the determination of appeals in connexion with non-contributory Old Age Pensions.

GENERAL REGISTER OFFICE

(England and Wales).

Somerset House, W.C.2.

Registration Branch, New Cumberland Hotel,
Blackpool. Statistical Branch, Terra Nova School,
Birkdale, Southport, Lancs. Central National
Registration Office, Southport, Lancs.
The Registration of Births, Marriages, and
Deaths is believed to have been inaugurated by

Thomas Cromwell in 1522, but the first Statutory provisions for such registration were not made until 1836, when the first Registrar-General of Births, Deaths, and Marriages in England was appointed. The Registrar-General is responsible for the Registration of Births, Stillbirths, Marriages, and Deaths, and is concerned with civil preliminaries to marriage and the celebration of marriages other than those according to the Rites of the Church of England. Statutory provisions on these matters are now contained in series of Births and Deaths Registration Acts and Marriage Acts passed between 1836 and 1941. Registration of stillbirths was introduced in 1926, in which year also the Legitimacy Act was passed providing for the legitimization of persons of illegitimate birth whose parents subsequently marry one another, and for the re-registration of the birth of such legitimated persons. In the same year the Adoption of Children Act was passed, which made provision for the granting of Orders of Adoption by the Courts and for the Registration of Adoptions effected under the Act. The Registrar-General is further responsible for the arrangements for the Census of Population and for the National Register.

The expenses of the Office for 1944-45 were estimated at £348,575. The estimate of Office receipts from fees for Certificates and Searches for the same period is £27,500.

Officers.

Registrar-General, G. C. North, M.C. (See Ministry of Health) (+ allowance £200)..... £1,700

Private Sec., Miss M. B. Sarah.

Deputy Registrar-General, R. J. R. Farrow

Pollard; D. A. Chart, I.S.O.; C. T. Flower, C.B.; S. C. Ratcliff, I.S.O.; William Angus; K. W. M. Pickthorn, M.P.; E. F. Jacob. Secretary, R. L. Atkinson, M.C.

HOME OFFICE.

Whitehall, S.W.1.

Telephone: Whitehall 8100. Telegraphic Address: "Monebbs, Parl. London."

The Secretaryship of State for Home Affairs was created in 1782, the duties having previously been assigned to the "Southern" Secretaryship, which embraced the affairs of Great Britain, Ireland, and the Colonies, and also Southern Europe. By the appointment of the "Home" and "Foreign" Secretaries the duties were divided in accordance with the names of the Offices, the former retaining Irish and Colonial business and, until 1794, War business also. In 1801 the Colonial business was also removed. The Home Secretary is the medium by which the Sovereign acquaints his people of his pleasure, and a channel of communication with the Sovereign, and his main functions are the maintenance of the King's peace, the enforcement of rules made for the internal well-being of the community, and the exercise of the prerogative of mercy.

Secretary of State for Home Affairs, THE RT. HON. JAMES CLIFFORD EDE, M.P. £5,000

Private Secretary, R. J. P. Hewison.

INDIA OFFICE,

King Charles Street, Whitehall, S.W.1.

Prior to 1858 Indian affairs were conducted by the East India Company, under the supervision of a Government Board of Control, whose President was responsible for Indian affairs in Parliament. On the transfer of India to the Crown in 1858 a Secretary of State, assisted by a Council, was entrusted with the administrative duties formerly discharged by the Company and Board. The Council ceased to exist from April 1, 1937, when some of its functions passed to a body of Advisers.

MINISTRY OF LABOUR AND NATIONAL SERVICE

St. James's Square, S.W.1.

[Tel. Whitehall 6200.]

The office of Minister of Labour was created by the New Ministries and Secretaries Act, 1926, which provided for the transfer to the Ministry of Labour of certain of the duties of the Board of Trade. The transfer became effective on Jan. 10, 1927. Under the Minister of National Service Order, 1939, the title of the Ministry was changed to the Ministry of Labour and National Service and the offices of the Minister of Labour and Minister of National Service are held by the same Minister. The principal functions of the Ministry of Labour and National Service are (i) the administration of the national system of Employment Exchanges and Appointments offices; (ii) the apportionment of available manpower between the Armed Forces and civilian employments; (iii) administration of the National Service Acts; (iv) operation of Government schemes for industrial training; (v) recruitment and distribution of male and female nurses and midwives on civilian work; (vi) administration of the Factory Acts (powers transferred from the Home Secretary to the Minister of Labour and National Service); (vii) arrangements for safety, health and welfare inside factories, for billeting workpeople, communal feeding and welfare arrangements outside factories, and supervision of welfare arrangements for Merchant Seamen in ports in Great Britain; (viii) plans for resettlement and training of men and women on release from the Armed Forces, Civil Defence or war work; administration of the further education and training scheme and training for disabled persons; (ix) assistance in the prevention or settlement of industrial disputes and generally dealing with questions affecting relations between employers and employed; (x) administration of the Wages Councils Act, 1945; (xi) dealing with labour policy in the international field, in-

cluding relations with the International Labour Organisation; and overseas questions concerning labour and employment; (xii) collection and publication of information and statistics relating to labour; (xiii) agency work in connection with the national scheme of Unemployment Insurance; (xiv) assisting and advising juveniles in regard to choice of employment; (xv) administration of the Catering Wages Act, 1943; (xvi) administration of the Reinstatement in Civil Employment Act, 1944.

The gross amount for the services administered by the Ministry (Parliamentary Vote, Class V., 4) was estimated at £26,570,000 for the year ending March 31, 1946, reduced by Appropriations in Aid to a net sum of £24,040,000. The gross estimate is made up as follows: *Salaries*, £1,410,000 for Headquarters Departments; £11,245,000 for Provincial Offices; £258,000 for Travelling, etc. Expenses; £80,000 for Incidental Expenses; £20,000 for Law Charges; £140,000 for Fees, Travelling Expenses, etc., of Members of Committees, Trade Boards, etc.; £12,878,000 for Employment and Training; £391,000 for Inspection of Factories; £10,000 for the Industrial Court. There is also included in the Gross Estimate a sum of £138,000 in connection with the International Labour Organisation (League of Nations), including a contribution of £135,000 towards the expenses of the Organisation.

War services undertaken by the Ministry are in the main covered by a token vote (Class X., 9) of £100.

The Ministry also administers the Parliamentary Vote (Class V., 5) for Grants in respect of Employment Schemes, amounting to £1,680,000.

INDEPENDENT OFFICES.

Catering Wages Commission.

1 Bryanston Square, W.1.

The Catering Wages Commission was created by the Catering Wages Act, 1943, with the following functions:—

- (1) To examine the arrangements for regulating the remuneration and conditions of employment in the Catering Trades and to make proposals in appropriate circumstances for the establishment of Wages Boards;
- (2) To inquire into any matters affecting the remuneration, conditions of employment, health or welfare of the workers to whom the Act applies;
- (3) To inquire into means for meeting the requirements of the public, including in particular the requirements of visitors from overseas, and for developing the tourist traffic.

The Commission may make such recommendations as they think fit to any Government Department in respect of any of the matters mentioned in (2) and (3) above.

Chairman.

Members, John E. Greenwood, LL.B., A.C.A.; Mrs. Hermione Hitchens, A.R.R.C., I.P.; Professor T. M. Knox; Captain H. W. J. Powell, F.S.I.; Mrs. M. J. Robinson; G. W. Thomson
 Secretary, £1,150 to £1,500

Acting Secretary, B. W. Smith, £750 to £860

† Serving with H.M. Forces.

H.M. LAND REGISTRY.

Temporary Address, Brooke Street, London, E.C.1.

H.M. Land Registry was established in pursuance of a recommendation of a Royal Commission by the Land Registry Act 1862. The aim of the Act was to render dealings with land more simple and economical by establishing a State register of landowners who voluntarily submitted the titles to their land for examination and approval by the Registrar on behalf of the State. The Registry was reformed by the Land Transfer Act 1875, which, while making many changes in the system, continued its voluntary basis. In 1897 the Land Transfer Act introduced the principle of compulsory

registration, and four Orders in Council under that Act between 1898 and 1902 made the system compulsory on sale in the administrative county of London. By a further Order made in 1925 Registration was made compulsory on sale in Eastbourne, under an order made in 1928 in Hastings, in 1936 in the administrative county of Middlesex and in Dec. 1938 in the County Borough of Croydon. The Land Registration Act 1925 consolidated the previous Acts, and made such changes in the system as the experience of a generation had shown to be necessary. The keynote of the system is that the machinery for the purchase and sale of land is assimilated to that for Stocks and Shares. Absolute titles granted by the Land Registry are guaranteed by the State. Simple forms, analogous to those used on transfers of Stocks and Shares, are provided. The cost of buying, selling or mortgaging registered land is much less than the cost in the case of unregistered land. It is open to any County Council or Council of a County Borough to apply to the Privy Council for an order making registration of title compulsory in its area. The Land Registry is administered under the Lord Chancellor by the Chief Land Registrar, who also controls the Land Charges Department under the Land Charges Act, 1925, and the Agricultural Credits Act 1928 (Sec. 9).

Registration of Title.

Chief Land Registrar, R. Mark Lowe, £2,000
 Registrars, C. C. Deans, £1,350 to £1,650; W. J. L. Ambrose, £1,200 to £1,400

London Hospital, E.1.

Physician-in-Charge, Donald Hunter, M.D., F.R.C.P.
Radiotherapeutic Research Unit, Hammersmith Hos-
pital, W.12.

Director, Constance A. P. Wood, M.R.C.P., D.M.R.E.
Human Nutrition Research Unit, National Hosp.
for Nervous Diseases, Director, B. S. Platt, C.M.G.,
M.B., M.Sc., Ph.D.

Otological Research Unit, National Hosp.
for Nervous Diseases, Director, C. S. Hallpike,
F.R.C.P., F.R.C.S.

Bacterial Chemistry Research Unit, at Lister Institute,
Chelsea Bridge Road, S.W.1. Director, P. G.
Fildes, O.B.E., M.B., F.R.S.

Cell Metabolism Research Unit, Sheffield University.
Director, Prof. H. A. Krebs, M.D.

Burns Research Unit, Birmingham Accident Hos-
pital, Bath Row, Birmingham 15. Director,
L. Colebrook, M.B., F.R.C.O.G., F.R.S.

Applied Psychology Research Unit, Dept. of Psycho-
logy, Cambridge University. Director (vacant).

Pneumokontosis Research Unit (South Wales), 32, The
Parade, Cardiff. Director, C. M. Fletcher, M.B.,
M.R.C.P.

Industrial Health Research Board.

Secretary, R. S. F. Schilling, M.B.

MERSEY DOCKS AND HARBOUR BOARD, Liverpool.

Nominee Members (appointed by the Minister of
Transport), R. J. Hall; Sir Robert S. Johnson,
O.B.E.; Charles McVey; T. Stone.

Elective Members (elected by Dock Electors), Sir
Thomas A. L. Brocklebank, Bt. (Chairman);
Edmund Gardner (Deputy Chairman); J. G. B.
Beazley, M.C., T.D.; Arthur F. Behrend; A. H.
Bibby, D.S.O.; William B. Bibby; Lt.-Col.
Albert Buckley, D.S.O.; Sir W. Nicholas Cayzer,
Bt.; Alan S. Chambers; William M. Clarke;
J. H. Coney; R. M. Easton; Robert L. Holt;
J. B. Watson Hughes; W. M. Love, O.B.E.;
A. C. Morrell, O.B.E., M.C.; Alma Parkin;
M. Arnet Robinson; Hugh L. Roxburgh; J. A.
Shone; R. P. Silcock; Frederick H. Southern;
R. H. Thornton, M.C. (one vacancy).

General Manager and Secretary, R. J. Hodges.

METROPOLITAN WATER BOARD,

New River Head, Rosbery Avenue, E.C.1.

The Board serves an area of 576 sq. miles. The
charges are levied on net annual value at such rate,
not exceeding 8½ per cent., as the Board may fix,
the charge for 1945-46 being 8½ per cent. on net

annual value. The Capital Debt on March 31,
1945, amounted to £57,262,825, the interest paid
being £1,777,402. The annual supply was
104,059,500,000 gallons (representing 404,600,000
tons), a daily average of 285½ million gallons.
One of the sources of supply is the New River
Company's undertaking, incorporated in the reign
of James I. (1609) by Sir Hugh Middleton, to
bring water from Amwell and Chadwell, Herts,
to London.

Chairman of the Metropolitan Water Board, Henry
Berry, M.B.E., F.R.S., F.R.I., F.R.A.S. (imp.)
Vice-Chairman, Cuthbert St. John Collins (imp.)
Clerk of the Board, C. W. Stokell, £1,600
Chief Engineer, F. F. Cronin, C.B.E., M.C., B.Sc.,
M.Inst.C.E., M.Institution of Civil Engineers, £3,000
Treasurer and Comptroller, Harold Graham, £1,500
Director of Water Administration, Lt.-Col. E. F. W.
Mackenzie, O.B.E., M.C., M.B., Ch.B., D.P.B.

Solicitor and Parliamentary Officer, H. R. McDowell,
£1,700
Surveyor, C. D. Shott, M.C., B.Sc., F.A.S., £1,700

MINISTER OF STATE.

Assisting the Secretary of State for
Foreign Affairs.

Minister of State, THE RT. HON. P. J. NOEL-BAKER,
M.P. £3,000

THE ROYAL MINT,

Tower Hill, E.C.3.

The usual facilities for the admission of visitors were
suspended for the period of the War.

Master and Worker, The Chancellor of the Ex-
chequer.

Deputy Master and Comptroller, and Engraver of
H.M. Seals, J. H. McC. Craig, C.B. £1,700
Chief Clerk, T. W. Kenner, M.B.E., F.C.W.A.

Superintendent, Operative Department, W. L.
Whitaker, O.B.E., B.Sc. (Eng.), A.C.G.I.

Deputy do., P. H. Pettiford, M.B.E., £1,200
Chief Assayer, J. Phelps, M.A. £850 to £1,200
Senior Clerk, H. G. Stride, M.B.E., £700 to £860
Accountant, F. G. Cawsey, £700 to £860

Branches of the Royal Mint.

Melbourne, Victoria.

Deputy Master, O. G. Reynolds £1,100

Perth, Western Australia.

Deputy Master, W. R. Rogers, I.S.O. £1,100

STANDING COMMISSION ON MUSEUMS AND GALLERIES.

Lambeth Bridge House, S.E.1.

Appointed Feb. 11, 1937. The functions of the
Commission are:—(1) to advise generally on
questions relevant to the most effective develop-
ment of the National Institutions as a whole and on
any specific questions which may be referred to
them from time to time; (2) to promote co-
operation between the National Institutions them-
selves and between the National and Provincial
Institutions; (3) to stimulate the generosity and
direct the efforts of those who aspire to become
public benefactors.

Chairman, The Earl Stanhope, K.G., D.S.O., M.C.
Secretary, L. G. S. Reynolds, C.B., C.B.E. £500

THE BRITISH MUSEUM.

Bloomsbury, W.C.1.

The Exhibition galleries are closed. Reading-
room open daily to readers from 9 a.m. to dusk, and

Newspaper Room (at Colindale), from 10 a.m., throughout the year, except Good Friday and Christmas Day, and Sundays. Closed for cleaning the week beginning with first Monday in May. Tickets of admission, for purposes of research and reference which cannot be carried on elsewhere, are granted on written application beforehand to the Director. The applicant must state abode, business or profession and full particulars of purpose, and must send a recommendation from a person of recognised position.

The British Museum may be said to date from 1753, when Parliament granted the sum of £20,000 to purchase the collection of books, &c., of Sir Hans Sloane, the building (Montagu House) being opened in 1759. The present buildings were erected between 1823 and the present day, and the original collection has increased to its present dimensions by gifts and purchases, and by the operation of the Copyright Acts. The administrative expenses were estimated at £161,744 in 1944-45, and were met by a vote under "Education, Science, and Art," Class IV. of the Civil Estimates.

STANDING COMMITTEE.

The Three Principal Trustees. The Archbishop of Canterbury; The Lord High Chancellor; The Speaker of the House of Commons—*ex-officio*; *Appointed by the Sovereign.* The Earl of Harewood, K.G., G.C.V.O., D.S.O., LL.D.; *Other Trustees.* Earl of Crawford; Earl of Ilchester, O.B.E.; Earl Baldwin of Bewdley, K.G., D.C.L., LL.D., F.R.S.; Lord Harlech, G.C.M.G.; Lord Macmillan, G.C.V.O., LL.D.; Lord Greene, O.B.E., M.C., D.C.L.; Archbishop Lord Lang of Lambeth, D.D.; Rt. Hon. Sir Ronald William Graham, G.C.B., G.C.M.G., G.C.V.O.; Sir Henry Thomas Tizard, K.C.B., A.F.C., F.R.S.; Sir C. R. Peers, C.B.E., P.P.S.A., F.B.A.; Sir Henry Dale, O.M., C.B.E., F.R.S., M.D., D.Sc., LL.D., F.R.C.P.; Prof. G. M. Trevelyan, O.M., C.B.E., F.B.A., D.C.L.; F. Cavenish Bentinck; Prof. G. A. Murray, O.M., D.Litt., F.B.A.; Prof. I. Stanley Gardiner, F.R.S.; C. H. St. John Hornby.

OFFICERS.

Director and Principal Librarian. Sir John Forsdyke, K.C.B., M.A., F.S.A. £1,650
Secretary. J. H. Witney, M.B.E. £1,058
Accountant. H. C. Stone. £650 to £750
Assistant Keeper. B. P. C. Bridgewater, B.A. £337 to £563
Staff Officer. H. H. E. Simmonds. £550 to £650
Second Division Clerk. H. C. Gregory £400 to £525
Clerk, Higher Grade. J. Edwards. £400 to £525
Keeper of Printed Books and Hon. Curator of the King's Music Library. H. Thomas, M.A., D.Litt., D.Lit., F.B.A. £1,161 to £1,761
Deputy Keepers. J. V. Scholderer, M.A.; A. I. Ellis, M.A., F.S.A.; C. B. Oldman, B.A. £1,058
Superintendent of Reading Room. A. I. Ellis, M.A. £1,058
Assistant Keepers. A. Forbes Johnson, M.C., B.A.; E. W. O'F. Lynam, B.A., D.Litt., M.P.I.A., F.S.A.; F. G. Rendall, B.A.; W. A. Smith, M.A.; H. Sellers, M.A., B.Litt.; L. A. Sheppard, M.A.; J. C. W. Horne, M.A.; F. C. Francis, M.A.; F. D. Cooper; N. F. Sharp, B.A.; R. A. Wilson, B.A.; A. H. Chaplin, B.A.; B. H. U. L. Townshend, B.A.; L. W. Hanson, M.A., B.Litt.; R. A. Skelton, B.A.; F. L. Kent, B.A.; A. H. King, B.A.; G. H. Spinney, B.A.; R. G. Lyde, B.A.; G. A. F. Scheele, B.A.; C. G. Allen, B.A.; Annie O'Donovan, B.A., M.Litt.; S. J. E. Southgate, B.A.; D. Barrett, B.A.; H. M. Nixon, B.A. (First Class) £605 to £953
 (Second Class) £337 to £563
Temporary Assistant Cataloguers. Audrey C. Broadhurst, B.A.; C. F. Beckingham, B.A.; J. L. Wood, B.A.; A. F. Johnstone-Wilson, B.A.; G. D. Painter, B.A.; F. K. Forrester, B.A. £250 to £600 or £500
Staff Officer. J. W. Skells. £550 to £650

Examiner of Binding. C. F. Gatehouse

£337 to £456
Clerks and Library Assistants, Higher Grade. C. C. Shearcroft; J. Davies; W. C. Gilscome; J. A. Petherbridge; E. C. Beharrell. £400 to £525
Keeper of Manuscripts and Eminent Librarian. E. G. Millar, M.A., D.Litt., F.S.A. £1,058
Deputy Keeper. A. J. Collins, B.A. £1,058
Assistant Keepers. G. T. Hals, M.A.; H. J. M. Milne, M.A.; B. Schofield, M.A., Ph.D.; H. R. Aldridge, M.A.; F. Wormald, M.A.; T. C. Skeat, B.A.; Margery L. Hoyle, M.A.; C. E. Wright, M.A., Ph.D., F.S.A.; A. D. Wilson, B.A. First Class £605 to £953; Second Class £337 to £563
Keeper of Printed Oriental Books and MSS. A. S. Fulton, M.A., D.Litt. £1,161 to £1,761
Assistant Keepers. J. Levean, B.A.; J. V. S. Wilkinson, B.A.; N. C. Sainsbury, M.A.; C. Moss (temp.) First Class £605 to £953; Second Class £337 to £563
Keeper of Prints and Drawings. A. E. Popham, B.A. £1,161 to £1,761
Assistant Keepers. E. F. Croft Murray, B.A.; P. M. R. Pouncey. £605 to £953
Keeper of Egyptian and Assyrian Antiquities. Sidney Smith, M.A., Litt.D., F.B.A., F.S.A. £1,161 to £1,761
Deputy Keeper. C. J. Gadd, M.A., F.B.A., F.S.A. £1,058
Assistant Keepers. R. D. Barnett, M.A.; I. E. S. Edwards, M.A.; H. G. M. Bass, B.A. £337 to £563
Keeper of Greek and Roman Antiquities. B. Ashmole, M.C., M.A., B.Litt., F.B.A. £1,161 to £1,761
Assistant Keepers. C. M. Robertson, B.A.; D. E. L. Haynes, B.A. £337 to £563
Keeper of British and Medieval Antiquities. T. D. Kendrick, M.A., F.B.A., F.S.A. £1,161 to £1,761
Assistant Keepers. A. B. Tonnochy, M.A., F.S.A.; W. A. H. King, M.A.; C. F. C. Hawkes, M.A., F.S.A.; R. L. S. Bruce-Mitford, B.A. First Class £605 to £953; Second Class £337 to £563
Keeper of Ethnography and of Oriental Antiquities. H. J. Braunholtz, M.A. £1,161 to £1,761
Deputy Keeper. B. Gray, M.A. £1,058
Assistant Keepers. R. S. Jenyns, B.A.; A. Digby, B.A.; W. B. Fagg, B.A.; O. Samson, Ph.D. (temp.) First Class £605 to £953; Second Class £337 to £563
Clerk, Higher Grade. A. G. Cook. £400 to £525
Keeper of Coins & Medals. John Allan, M.A., F.B.A., F.S.A. £1,161 to £1,761
Deputy Keeper. E. S. G. Robinson, M.A., F.B.A., F.S.A. £1,058
Assistant Keepers. Harold Mattingly, M.A.; J. Walker, M.A., D.Litt.; D. F. Allen, B.A. First Class £605 to £953; Second Class £337 to £563
Deputy Keeper in Charge of Laboratory. H. J. Plenderleith, M.C., B.Sc., Ph.D., F.R.S.E., F.S.A. £1,058 to £1,761
Assistant Keeper. A. A. Moss, Ph.D., B.Sc. £337 to £563
Official Guide Lecturer. A. O'N. Osborne, B.A. £337 to £575

THE LONDON MUSEUM.

Lancaster House, St. James's, S.W.1.

Closed to Public: Building occupied by the European Advisory Commission
Admission in Peace Time on Tuesdays, Wednesdays and Thursdays, 6d.; other days free. Hours: 11 a.m. to 5 p.m. (Sundays 2 to 5 p.m.).

The London Museum was instituted, on the lines of the Carnavalet at Paris, for the conservation of antiquities and other objects associated with the history of London. The Collection was originally housed in Kensington Palace, and was reopened in 1914 at Lancaster House.

Keeper, Secretary and Accounting Officer (vacant)
Assistants. M. R. Holmes, F.S.A., £563; J. S. P. Bradford, B.A. £337 to £575

THE BRITISH MUSEUM (NATURAL HISTORY).

Cromwell Road, S.W.7.

Closed until further notice.

Normal arrangements are:—

Open free on week-days (except Good Friday and Christmas Day) 10 to 6, and on Sundays from 2.30 to 6.

Official Guide-lecturers conduct visitors round some portion of the collections at 11.30 a.m. and at 3 p.m. daily free of charge on weekdays, and at 3 p.m. and 4.30 p.m. on Sundays, and their services are available at other times for special parties (also free of charge) by arrangement with the Director. Students are admitted daily for the special study of the collections, and to make drawings and take photographs of specimens, under special regulations to be obtained from the Director. The Museum issues a large variety of publications, comprising scientific monographs and catalogues, popular guide-books and manuals, instructions for collectors, economic pamphlets, and picture post-cards, both monochrome and in colour.

The Natural History Collections in the British Museum were removed to South Kensington and rearranged there in 1881-85, the new museum being opened to the public in 1881. The collections comprise all branches of natural history. A morphological series in the central hall; a collection of domesticated animals; a series of insects illustrating economic zoology; galleries of mammals, including whales; birds and their nests; fishes; reptiles; insects; shells; corals; sponges, &c.; galleries of fossils of all kinds; a botanical gallery; and an extensive gallery of minerals, rocks, and meteorites, with series of specimens forming introductions to their study. The Zoological Museum, Tring, bequeathed by the second Lord Rothschild, has formed part of the British Museum (Natural History) since 1938.

The administrative expenses were estimated at £110,591 in 1945-46.

Director, C. Forster-Cooper, Sc.D., F.R.S.

Secretary, T. Wooddisse £1,350 to £1,650

Accountant, R. J. Drumm £800 to £950

Clerks, Higher Grade, C. C. Milan, £400 to £525;

Miss D. E. Cocks £320 to £420

Assistant Keeper (Library), A. C. Townsend, M.A. £605 to £953

Assistant Keeper (Index Museum), J. P. Doncaster, B.A. £605 to £953

Guide-Lecturer, Miss M. R. J. Edwards, B.Sc. £313 to £504

Keeper of Zoology, N. B. Kinnear £1,161

Deputy Keepers, H. A. Baylis, D.Sc.; H. W. Parker, B.A. £1,058

Assistant Keepers (First Class), A. K. Totton, M.C.; M. Burton, D.Sc.; F. C. Fraser, D.Sc.; D. D. John, M.Sc.; J. D. Macdonald, B.Sc.; G. I. Crawford, M.A.; T. C. S. Morrison Scott, M.Sc.; R. J. Whitlick, B.Sc.; J. P. Harding, M.A., Ph.D. £605 to £953; Miss I. Gordon, D.Sc.; Miss E. Trewavas, D.Sc. £527 to £797

Assistant Keeper (Second Class), C. D. Ovey £337 to £563

Technical Assists., Higher Grade, J. C. Vickery; W. E. Barnett £400 to £525

Keeper of Entomology, N. D. Riley £1,161

Deputy Keeper, W. E. China, M.A. £1,058

Assistant Keepers (First Class), F. Laing, M.A., B.Sc.; W. H. T. Tams; H. Scott, Sc.D., F.R.S.; R. B. Benson, M.A.; A. W. McKenny Hughes; A. G. Gabriel; A. S. Corbett, D.Sc.; J. F. Perkins, B.Sc.; J. Smart, Ph.D.; R. Washbourn, B.A.; E. B. Britton, B.Sc. £605 to £953

Assistant Keepers (Second Class), H. Oldroyd, B.A.; H. E. Hinton, Ph.D. £337 to £563

Technical Assistants (Higher Grade), H. Stringer; F. Barnett £400 to £525

Keeper of Geology, W. N. Edwards, B.A. £1,161

Deputy Keeper, E. I. White, D.Sc. £1,058

Assistant Keepers (First Class), L. R. Cox, Sc.D.; A. T. Hopwood, D.Sc.; W. E. Swinton, Ph.D.; H. D. Thomas, Ph.D.; L. Bairstow, M.A.; K. P. Oakley £605 to £953

Assistant Keepers (Second Class), W. N. Croft, D.Sc. to £563; Miss H. M. Muir-Wood, D.Sc. £337 to £563

Technical Assistants (Higher Grade), A. Reiley; L. E. Parsons £400 to £525

Keeper of Mineralogy, W. Campbell Smith, M.C., T.D., M.A., Sc.D. £1,161

Deputy Keeper, F. A. Bannister, M.A. £1,058

Assistant Keepers (First Class), M. H. Hey, D.Sc.; G. F. Claringbull, Ph.D.; J. D. H. Wiseman, Ph.D. £605 to £953

Assistant Keeper (Second Class), P. M. Game, B.Sc. £337 to £563

Scientific Assistant, Miss J. M. Sweet, B.Sc. £250 to £400

Technical Assistant (Higher Grade), A. F. J. May £400 to £525

Keeper of Botany, J. Ramsbottom, O.B.E., D.Sc. £1,161

Deputy Keeper, A. J. Wilmott, M.A. £1,058

Assistant Keepers (First Class), A. W. Exell, M.A.; G. Tandy, B.A.; J. E. Dandy, M.A.; G. Taylor, D.Sc.; A. H. G. Alston, B.A.; W. R. Phillipson, B.A.; R. Ross, M.A. £605 to £953

Assistant Keeper (Second Class), J. M. Lamb, D.Sc. £337 to £563

Scientific Assistant, Miss F. L. Stephens, M.Sc. £250 to £400

Technical Assistant (Higher Grade), J. Ardagh £400 to £525

THE SCIENCE MUSEUM,

South Kensington, S.W.7.

Open free on weekdays, 10 to 6; Sundays 2.30 to 6. Closed on Good Friday and Christmas Day.

For Science Museum Library, see below.

The Science Museum, which is the National Museum of Science and Industry, was instituted in 1859 under the Science and Art Department as a part of the South Kensington Museum, and opened in 1857; to it was added in 1883 the Collections of the Patent Museum. In 1909 the administration of the Science Collections was separated from that of the Art Collections, which were transferred to the Victoria and Albert Museum. The Collections in the Science Museum illustrate the application of science to industry and the development of scientific and industrial instruments, apparatus and machinery.

The five departments into which the exhibits are grouped are shown below.

The administrative expenses of the Museum and Library were estimated at £85,942 in 1945-46 to be met by a vote under Education.

Director and Secretary, Colonel E. B. Mackintosh, D.S.O. £1,500

Museum Superintendent, S. T. Kelly, £700 to £860

Staff Officer and Deputy Museum Superintendent, E. I. P. Cecil £550 to £650

Department of Physics and Geophysics.

Keeper, H. Shaw, D.Sc., A.R.C.S. £1,050 to £1,150

Assistant Keeper (First Class), S. F. A. B. Ward, Ph.D. £600 to £850

Assistant Keepers (Second Class) D. H. Follett, M.A.; D. Chilton, B.Sc., D.I.C. £337 to £600

Department of Astronomy, Mathematics, Optics and Chemistry.

Keeper (Second Class), A. Barclay, A.R.C.S., F.R.I.C. £900 to £1,050

Assistant Keepers (First Class), S. W. E. Pretty, Ph.D., A.R.C.S. (also Secretary to Advisory Council); H. R. Calvert, M.A., D.Phil. £600 to £850

Department of Civil and Mechanical Engineering and Land Transport.

Keeper (Second Class), G. F. Westcott, M.A., A.M.I.Mech.E. £900 to £1,050
Assistant Keepers (First Class), F. G. Skinner, B.Sc. (Eng.); A. Stowers, B.Sc. (Eng.), A.M.Inst.C.E. £600 to £850
Assistant Keeper (Second Class), C. St. C. B. Davison, M.Sc., Ph.D. £337 to £600

Department of Industrial Engineering.

Keeper (Second Class), F. St. A. Hartley, A.C.G.I. £900 to £1,050
Assistant Keepers (First Class), W. T. O'Dea, B.Sc., A.M.I.E.; † G. R. M. Garratt, M.A., A.M.I.E.E. £600 to £850
Assistant Keepers (Second Class), S. Lebeter, M.Sc., A.I.M.E.; G. W. Creasby £337 to £600

Department of Air and Water Transport.

Keeper, M. J. B. Davy, F.R.Ae.S., £1,050 to £1,150
Assistant Keeper (First Class), H. P. Spratt, B.Sc., A.I.Mech.E. £600 to £850

Library.

SCIENCE MUSEUM LIBRARY, Imperial Institute Road, S.W.7.—Attached to the Science Museum: The National Library especially devoted to pure and applied Science. 314,000 volumes, 17,000 periodicals, a set of British patent specifications. Subject-matter index to articles in periodicals, 2,800,000 cards. Bibliographies supplied.—Open Monday to Saturday, 10 to 5.50. Closed on Good Friday, Christmas Day, Sundays and Bank Holidays. Admission free. Books lent to Government Departments, Universities and approved Research Institutions, and industrial organisations.
Keeper, £1,050 to £1,150
Assistant Keepers (First Class), H. T. Pledge, B.A.; S. E. Janson, M.A., Ph.D. £600 to £850
Assistant Keeper (Second Class), D. J. Urquhart, B.Sc., Ph.D. £337 to £600
Junior Assistant, Miss M. Gosset, A.R.C.S., B.Sc., £220 to £450
Temporary Junior Assistant, Miss P. I. Edwards, B.Sc., £200 to £320

† Serving with H.M. Forces.

‡ Loaned to another Government Department.

THE VICTORIA AND ALBERT MUSEUM,

South Kensington, S.W.7.

The limited number of galleries open during the war are being extended. Hours, 10 to 5 (Sundays 2.30 to 6). Admission free. Persons desiring full use of the Library must apply for a ticket.

The history of the Museum may be said to begin in 1852, when the Museum of Ornamental Art was founded at Marlborough House. The collection consisted of certain objects which had been purchased at the 1851 Exhibition, "on account of the excellence of their art and workmanship," at a cost of £5,300, together with other specimens purchased for the use of the various Schools of Design since 1837, and dispersed among them. Additions have since been made by purchase, gift, and bequest. There are, in addition to the Indian Section, nine other departments, viz.:—Architecture and Sculpture; Ceramics; Engraving, illustration and Design; Metalwork; Paintings; Woodwork; Textiles; Library (books on art) and Book Production; and the Department of Circulation. The older parts of the building were erected between 1860 and 1884; the new buildings were completed in 1909. The branch museum at Bethnal Green was opened in 1872, the building having been removed from South Kensington, and re-erected on land purchased for the purpose locally.

Director and Secretary, A. L. B. Ashton
 £1,360 to £1,650

Secretariat.

Museum Superintendent, S. J. P. Willcock; *W. Hencock, £700 to £860
Staff Officer, *A. E. Foster, £550 to £650

Department of Architecture and Sculpture.

Keeper (Second Class), S. H. D. Molesworth, £1,058
Assistant Keeper (First Class), S. M. N. F. Stewart, £605 to £953
Assistant Keeper (Second Class), J. W. Poppe-Hennessy £337 to £563

Department of Ceramics.

Keeper, *W. B. Honey, £1,161
Assistant Keeper (First Class), E. A. Lane, £605 to £953

Departments of Engraving, Illustration and Design, and of Paintings.

Keeper, J. Laver, £1,161
Deputy Keeper, C. Winter, £1,058
Assistant Keepers (Second Class), † B. E. Reade; A. G. Reynolds £337 to £563

Library.

Keepers (Second Class), S. P. B. James; *A. W. When, M.M. £1,058
Assistant Keepers (First Class), J. Wardrop; S. C. H. Gibbs-Smith £605 to £953

Department of Metalwork.

Keeper (Second Class), *C. C. Oman, £1,058
Assistant Keeper (Second Class), † B. W. Robinson, £337 to £563

Department of Textiles.

Keeper (Second Class), *I. L. Nevison, £1,058
Assistant Keepers (Second Class), G. F. W. Digby; † G. Brett £337 to £563

BETHNAL GREEN MUSEUM.

Bethnal Green, Cambridge Heath Road, E.2.

The Museum is closed at present: Normal arrangements are:—Free daily (closed Good Friday and Christmas Day); Weekdays 10 a.m. to 6 p.m.; Sundays, 2.30 to 6 p.m. Branch of Victoria and Albert Museum. Collections of pictures, furniture, pottery, textiles, British birds; collection of modern industrial art; Reference Library of books on art; section for objects of special interest to children.

IMPERIAL WAR MUSEUM,

Lambeth Road, S.E.

Closed, as result of damage in air raid. It is hoped to hold small "token" exhibitions in 1946. Normal arrangements are:—Open free daily (except Good Friday and Christmas Day), 10 a.m.; Sundays 2 p.m. Closes at 6 p.m. in summer and at dusk in winter.

The Museum was founded by the War Cabinet in March, 1917, and established by Act of Parliament in 1920 as a memorial of the effort and sacrifice made by the men and women of the Empire during the Great War of 1914-1918 and to provide a record and a place for the study of that period. The scope of the Museum has been extended to include the records of the War of 1939-45. The collections, to which additions are constantly being made, include Naval and Military trophies and relics, ordnance, small arms and ammunition, ship and other models, paintings, drawings, sculpture and commemorative medals, maps, war currency and stamps; photographs (comprising over 250,000 subjects, prints of most of which may be purchased), air photographs, lantern slides and cinematograph films. There is a reference library containing 60,000 books and pamphlets available for study to the public.

Director, L. R. Bradley, O.B.E. £1,000
Assistants, Ernest Blaikley, M.S.M., F.R.S.A.; H. Foster, £277 to £634
Clerk in Charge of Accounts, A. J. Charge £396 to £634

NATIONAL MARITIME MUSEUM,

Greenwich, S.E.10.

Open on weekdays 10 till 6; Sundays 2.30 to 6. Closed on Good Friday, Christmas Eve and Christmas Day. Admission free, except on Fridays 6d. Reading Room and Students' Section of the Print Room open on weekdays 10 to 4.30; tickets of admission on written application to the Director.

The National Maritime Museum was established by Act of Parliament on July 24, 1934, for the illustration of the maritime history, archaeology and art of Great Britain. The Museum, which has absorbed the Royal Naval Museum and the Painted Hall Collections is accommodated in the Queen's House (built by Inigo Jones, 1616-35) and the Caird Galleries (converted at the expense of Sir James Caird, Bt.). The collections include paintings; ship-models; ships' lines; prints and drawings; maps, atlases and charts; navigational instruments; relics; books and MSS. The amount for salaries and expenses, including a Grant in Aid, was estimated at £10,769 in 1944-45.

Director and Accounting Officer, Sir Geoffrey Callender, M.A., F.R.S., A.I.N.A. £7,162
Assistants, Reginald Lowen; Charles Mitchell, B.A.; B. Litt.; G. P. B. Naish, B.A., £275 to £625; Lt.-Comdr. R. T. Gould, R.N., £400; M. S. Robinson, £200 to £400
Higher Clerical Officer, A. Smith £400 to £525

THE NATIONAL CENTRAL LIBRARY.

Malet Place, London, W.C.1.

Incorporated by Royal Charter and maintained by annual grants from the Treasury, Municipal and County Authorities, and public Trusts.

The Library is a national centre for the loan of books (other than fiction and students' text-books) to readers in all parts of the British Isles, through their public, university, or other library. It is able to draw on over 21,000,000 books in nearly all the principal British libraries. Special Departments include the Information Department (for the supply of bibliographical information), the Adult Class Department (which lends books to organized classes of adult students), and the Bureau of American Bibliography (which contains the chief American bibliographies and catalogues, including the only set of the Library of Congress card catalogue in the British Isles). In normal times the Library maintains an international lending service.

Applications to borrow books must be made through the reader's library and not directly to the National Central Library.

Chairman of Trustees, Albert Mansbridge, C.B., L.D.

Vice-Chairman of Trustees, The Earl of Elgin and Kincardine, K.T., C.M.G., L.L.D.

Chairman of Executive Committee, Sir Frederic G. Kenyon, G.B.E., K.C.B., L.L.D.

Librarian and Secretary to the Trustee, R. H. Hill, M.A., L.L.A.

NATIONAL GALLERY,

Trafalgar Square, W.C.2.

Hours of opening.—April to October, Weekdays 10 to 6, Sundays 2 to 6; November to March, Weekdays 10 to 5, Sundays 2 to 5. Admission free, except to some temporary exhibitions. Closed on Good Friday, Christmas Eve, and Christmas Day.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1876, 1887, 1911, 1928, 1930 and 1937. The cost of administration in 1944-45 was estimated at £18,261.

TRUSTEES.

Rt. Hon. Vincent Massey, P.C. (*Chairman*); Sir Muirhead Bone; Capt. Edward George Spencer-Churchill; Samuel Courtauld; The Earl of Crawford; Rt. Hon. Anthony Eden, P.C., M.P.; Lord Herbert; Lord Keynes, C.B.; Rt. Hon. Viscount Lee of Fareham, P.C., G.C.E., G.C.S.I., G.B.E.; Hon. Jasper Ridley.

OFFICERS.

Director, Sir Kenneth M. Clark, K.C.B. £1,360 to £1,650
Keeper, William Gibson £1,058
Assistants, M. Davies; P. M. R. Pouncey; Nell MacLaren £337 to £738
Scientific Adviser to the Trustees, F. I. G. Rawlins
Supervisor of Publications, The Lady Margaret Douglas-Home £330

NATIONAL PORTRAIT GALLERY,

St. Martin's Place, Charing Cross, W.C.2.

The first floor and the east wing are open Monday to Friday 10 to 4, Saturday 10 to 5, Sunday 2 to 5. A selection of the most important portraits is on view.

The first grant to the institution was made in 1856, the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1896, £80,000 being contributed to its cost by Mr. W. H. Alexander; an extension erected at the expense of Lord Duveen was opened in 1933. The amount for salaries and expenses, including a grant of £193 for purchase of portraits, was estimated at £11,371 for 1945-46.

Director, Keeper and Secretary, H. M. Hake, C.B.E., F.S.A. £1,058
Assistant to Director, C. K. Adams, F.S.A. £337 to £738

TATE GALLERY,

Millbank, S.W.1.

Closed pending repairs to bomb damage; a selection of pictures is temporarily on view at the National Gallery: Normal arrangements are—Students' days, Tuesday and Wednesday 6d.; other days free.

The Tate Gallery, which constitutes the National Collection of British painting and sculpture, of modern Foreign Art, and of Modern Sculpture, was opened in 1897 by the Prince and Princess of Wales, the cost of erection (£80,000) being defrayed by the late Sir Henry Tate, who also contributed the nucleus of the present collection. The *Turner Wing*, built at the expense of Sir Joseph Duveen, was opened in 1910. The galleries of *Modern Foreign Art* and that devoted to the work of

Sargent were opened in 1926. These were the gift of the late Lord Duveen of Millbank, who also presented the *Sculpture Gallery*, opened in 1937. The cost of administration in 1944-5 was £70,798. *Director and Keeper*, J. K. M. Rothenstein, M.A., Ph.D. £1,161
Assistant, R. C. Ironside £337 to £738
Temporary Assistant, R. M. D. Thesiger.

WALLACE COLLECTION,

Hertford House, Manchester Square, W.1.

Admission 6d. on Tuesdays and Fridays (Members of the armed forces in uniform admitted free); other days free. Open on weekdays 10 a.m. to 5 p.m.; Sundays 2 p.m. to 5 p.m. Closed on Good Friday, Christmas Eve and Christmas Day.

The Wallace Collection was bequeathed to the nation by the widow of Sir R. Wallace, Bt., K.C.B., M.P., in 1897, and Hertford House was subsequently acquired by the Government. The collection includes pictures, drawings and miniatures, French furniture, bronzes, porcelain, armour, and miscellaneous *objets d'art*. The expenses were estimated at £12,185 in 1944-45.

Keeper & Secretary, James G. Mann, M.A., F.S.A. £1,000
Assistant to Keeper, F. J. B. Watson, B.A. £337 to £738

THE NATIONAL LIBRARY OF WALES.

Aberystwyth.

Readers' room open on weekdays, 10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m.; closed on Sundays. Admission by Reader's Ticket.

Founded by Royal Charter, 1907, and maintained by annual grant from the Treasury. One of the six libraries entitled to certain privileges under Copyright Act. Contains approx. 1,000,000 printed books, 25,000 manuscripts, 1,500,000 deeds and documents, and numerous maps, prints and drawings. Specialises in manuscripts and books relating to Wales and the Celtic peoples. National Bureau of the Regional Libraries Scheme for Wales and Monmouthshire.

Librarian, Sir William Ll. Davies, M.A., F.S.A.

PATENT OFFICE

(and Industrial Property Department, Board of Trade),

25 Southampton Buildings, W.C.2.

The prerogative of the Crown to grant monopolies was limited by 21 James I. c. 3 to the grant of Letters Patent for New Inventions, and the control of such grants was transferred to the Board of Trade by 46 & 47 Vict. c. 57. The duties of the Department, which deals mainly with the granting of patents, the registration of designs and trade marks, and with questions relating to literary and artistic copyright, are performed by a Comptroller-General with a staff of officials. For the year 1944 the expenditure was £293,335, and the revenue from fees, &c., was £763,794. In 1944 the Patent Office sealed 7,712 patents and registered 2,436 designs and 3,340 trade marks.

Comptroller-General, H. L. Saunders. £1,750
Private Secretary, Miss G. J. Middlemass.

Assistant Comptrollers, B. G. Crewer, O.B.E.; J. H. Oates; S. E. Chisholm. £1,200 to £1,400

Manchester Office.

Keeper of Cotton Marks, S. Mitton, M.B.E. £585 to £738
Staff Officer, W. L. Hayes, £535 to £635

PAYMASTER-GENERAL'S OFFICE,

Somerset House, W.C.2.

The Paymaster General's Office was formed by the consolidation in 1835 of various separate pay departments then existing, some of which dated back at least to the Restoration of 1660. Other offices were incorporated in 1848. Its function is that of paying agent for the different Government Departments, other than the Revenue Departments. The majority of its payments are made through banks (to whose accounts the necessary transfers are made at the Bank of England), but cash payments are also made, and the payment of pensions is an important feature of its work. The Establishment expenses were estimated at £158,200 in 1945-46.

Paymaster-General (vacant), £2,000
Personal Assistant, G. D. A. MacDougall, O.B.E.
Assistant Paymaster-General, R. C. S. Taylor, O.B.E. £1,300

Private Sec., A. M. Ford.
Dep. Asst. Paymaster-Gen., A. H. May £1,050 to £1,200
Principal Clerks, F. C. Johnson; P. W. Thorogood, O.B.E., £900 to £1,050
Heads of Divisions, J. S. McIntyre, I.S.O.; C. J. Corkrey; A. La C. Baudains, M.B.E.; F. H. Fox; W. G. Stedman; D. E. Davies, M.B.E.; A. Gardner; H. Smith; H. J. Pearne; T. C. Copinger, £700 to £860

MINISTRY OF PENSIONS,

18 Great Smith Street, Westminster, S.W.1.
 and Norcross, Blackpool, Lancs.

The amount required to defray the salaries and expenses of the Ministry and for sundry contributions in respect of the Administration of the Act, was estimated at £36,428,000 for 1945/46.

Minister, THE RT. HON. WILFRED PALING, M.P. £2,000
Private Secretaries, A. O. Woodgate; S. J. C. Ainsworth.

PORT OF LONDON AUTHORITY,

Head Office, London, E.C.3.

The Port of London Authority, established under the Port of London Act, 1908 (8 Edw. VII. c. 68), on the 31st March, 1909, for the purpose of administering, preserving, and improving the Port of London, consists of 28 members—10 appointed and 18 elected, with a Chairman appointed by the Authority.

The following undertakings were transferred to the Port Authority as from the 31st March, 1909:—Thames Conservancy (all rights, powers and duties of the Conservators of the Thames in respect of the river below Teddington); London and India Docks Company; Surrey Commercial Dock Company; Millwall Dock Company; and Watermen's Company, except certain property and funds. The working of the Port for the year ended March 31, 1939, showed a surplus of £29,668, leaving a balance of £370,637 carried forward.

Chairman (April 1, 1943-46), Rt. Hon. Thomas Wiles, P.C.

Vice-Chairman (April 1, 1943-46), L. H. Bolton.

Appointed Members.

Medical Officer, F. Harris White, M.R.C.S., L.R.C.P., D.P.H.
Estate Officer, R. H. Pentleton, F.S.I.
Stores Officer, *A. C. Garrett.
Head of Salvage Dept., E. L. Stanley.

* Acting.

POST OFFICE,

Chief Office, St. Martin's-le-Grand, E.C.1.

A House of Commons report in 1844 states: "It is uncertain at what precise period the Crown undertook to be the regular carrier of letters for its subjects." The first "Master of the Posts" was appointed in 1516, but the duty was not then undertaken as a remunerative department of the Government. The Post Office is now one of the three great revenue-collecting departments, and while efficiently discharging its multifarious duties, shows a large annual profit. It also receives large sums for duties and taxes on behalf of the Inland Revenue Department, for certain licences for the Customs and Excise Department and the County Councils, and for National Insurance on behalf of the Ministry of Health and the Ministry of Labour and National Service. The Post Office also pays Widows', Orphans' and Old Age Pensions, and Naval, Military and Air Force Pensions and Allowances. The Penny Post was inaugurated in 1840, the Book Post in 1855, the Post Office Savings Bank in 1861, the Post Office Telegraphs in 1870, the Money Order Office in 1799, Postal Orders in 1881, the Parcel Post in 1883, and the Telephone Service in 1892. The expenses of the Post Office (Salaries, Wages, &c., only) were estimated at £86,882,500 in 1945-46.

Post Office transactions with the public during 1943-44 exceeded £2,400,000,000, breaking all previous records. The highest pre-war total was £1,062,000,000. There are in Great Britain 24,000 Post Offices, 5,800 Telephone Exchanges, 52,200 Telephone Call Offices and 3,800,000 Telephones.

Postmaster-General, THE EARL OF LISTOWEL...£3,000
Principal Private Secretary, G. R. Parsons.
Assistant Private Secretary, Miss P. M. James.
Assistant Postmaster-General, W. A. Burke, M.P.

Private Secretary, Mrs. D. E. Mitchell.

[Belfast 21212.]

Secretary, K. S. McKibbin.

PRIVY COUNCIL OFFICE,

Great George Street and Whitehall, S.W.1.

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the Chief Advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given on pp. 252-253. Members of the Cabinet must be Privy Counsellors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g., the Judicial Committee, the Board of Trade, &c. The Lord President of the Council is one of the Great Officers of State, and as such is always a prominent member of the Cabinet.

Lord President of the Council, THE RT. HON. HERBERT MORRISON, M.P. £5,000

Private Sec., J. A. R. Pimlott.

Asst. Private Sec., Miss E. M. Donald, M.B.E.

Parliamentary Private Sec., Major C. P. Mayhew,

M.P. unpaid

Permanent Under-Secretary, E. M. Nicholson

Clerk of the Council, E. C. E. Leadbitter, C.V.O.

Deputy Clerk of the Council, *F. J. Fernau, T.D. £1,700

Senior Clerk (vacant). £1,060

Staff Officer, T. R. T. Evans, M.B.E. . . £550 to £650

* Acting.

PUBLIC TRUSTEE OFFICE,

Kingsway, W.C.2.

(Temporary Address, 7 Crosby Square, Bishopsgate, E.C.3.)

This is a Government Office (opened in 1908) by means of which the State acts as Executor and Trustee under a Will, or as Trustee under a Settlement, and in other capacities of a like nature. The value of the trusts accepted up to March 31, 1945, was £503,973,744.

The facts of any trust, new or old, in which it is desired that the Public Trustee should act may be brought to his notice by letter or by personal interview. The appointment is effected in the same way as a private trustee, or by an Order of the Court. He can act solely or jointly with others.

In the case of a Will, all that the testator need say is, "I appoint the Public Trustee executor and trustee of this my Will"; or the appointment may be a joint one with others. Executors who have obtained probate can transfer their duties to him under an Order of the Court. He can also act as Administrator with, or without, the Will annexed.

Strict secrecy is observed in all matters dealt with in the Department. Accounts in simple form are furnished to the beneficiaries as required.

An interview with the Public Trustee or with any of his senior officers can be arranged at any time. A pamphlet giving particulars and details of the fees can be obtained free of cost from the Office of the Public Trustee, 7, Crosby Square, Bishopsgate, E.C.3, or at any Post Office.

Public Trustee, Reginald Ramson Whitty, C.B.E.

Deputy Commissioners (Temporary), J. F. Bagnall;
 M. B. Goodman; E. L. Guest; L. B. Mayer-
 Jones; J. W. S. Osborn; T. J. Salmon; A. W.
 Sanders; L. H. Smith; G. R. Young £600 to £700

* Officers serving with H.M. Forces.

SCOTTISH SAVINGS COMMITTEE,

York Buildings, Edinburgh, 2.

President and Chairman, The Rt. Hon. LORD ALNESS,
 P.C.
 Members, Lt.-Col. C. L. Addison-Smith, C.B.E.,
 W.S.; William S. Allison, D.L., J.P.; Lady Ruth
 Balfour, C.B.E.; Edgar P. Brown, J.P.; The
 Duchess of Buccleuch; James Campbell; Most
 Rev. Bishop E. L. Hanson, M.A., D.D.; Very Rev.
 Canon Delany; Lady Dollan; John M. Erskine,
 D.L., J.P., F.R.S.E.; Lord Provost Falconer, M.C.;
 James R. Fiddes, C.B.E., J.P.; Thomas Hart, J.P.,
 F.R.S.F., C.A.; J. D. Imrie, C.B.L., M.A., B.Sc.,
 Provost Sir Hugh Mackenzie; Bailies James A.
 Mackie; R. J. R. Measham, C.M.G.; Mrs. George
 Mercer; J. W. Napier, M.B.E., M.I.Chem.E.;
 Henry Robb, J.P., M.I.N.A.; P. J. G. Rose, C.B.;
 Rt. C. W. G. Taylor, D.D.; J. B. Thomson, J.P.,
 F.L.M.T.A.; Adam Wilson, C.B.E., M.I.Chem.E.
 Secretary, J. L. Wells, O.B.E.

(+ allowance £100) £800 to £1,000
 Principal Assistant, A. Thomson, M.A. £680 to £840
 Area Organizers, J. M. Bowler; A. Garrow; L.
 L. D. Hay; J. Mair; J. Ure; D. M. Watt £275 to £650

DEPARTMENT OF SCIENTIFIC AND INDUSTRIAL RESEARCH,

Park House, 24, Rutland Gate, S.W.7.

Appointed by Order in Council dated July 28,
 1925 (amended February 6, 1928), to direct the
 application of any sums of money provided by
 Parliament for the organisation and development
 of Scientific and Industrial Research. The Com-
 mittee consists of the holders for the time being of

certain Ministerial offices. The Order in Council
 also appointed an Advisory Council to whom all
 proposals for researches stand referred. By
 Charter dated November 23, 1916, amended by a
 supplemental Charter dated April 27, 1928, the
 members of the Committee of the Privy Council
 were created a Body Corporate under the name of
 "The Imperial Trust for the Encouragement of
 Scientific and Industrial Research" to hold and
 dispose of money and other property for the pur-
 poses of the Committee. On December 25, 1916,
 a separate Department, having its own Parlia-
 mentary Vote, was created for the service of the
 Committee.

The aggregate net estimate for the Department
 in 1945-46 amounts to £1,405,271, an increase of
 £422,160 on the same estimate for 1944-45. The
 gross estimate amounts to £1,817,217; Head-
 quarters administration, £74,664; Grants for Re-
 search, £429,900; Research Work and Research
 Establishments (except Geological Survey and
 Museum), £1,217,706; Geological Survey of
 Great Britain and Museum of Practical Geology,
 £94,947.

President of the Committee of the Privy Council, The
 Lord President of the Council.

Advisory Council, Lord Riverdale, C.B.E., LL.D.
 (Chairman); J. Benstead; Sir Lawrence Bragg,
 O.B.E., M.C., D.Sc., F.R.S.; W. J. Drummond;
 Prof. H. Munro Fox, F.R.S.; H. L. G. Gull, C.B.E., D.Sc.,
 F.R.S.; Sir William Halcrow, M.Inst.C.E.; Prof.
 I. M. Heilbron, F.R.S.; Prof. J. E. Lennard-Jones,
 Ph.D., D.Sc., F.R.S.; W. F. Lutyens; A. McCance,
 D.Sc., F.R.S.; C. C. Paterson, F.R.S.; Sir Franklin
 Sibby, K.B.E., D.Sc., LL.D.; Sir Raymond Streat,
 C.B.E.; E. Thornton.

Secretary to the Committee, Sir Edward Appleton,
 K.C.B., D.Sc., LL.D., F.R.S.

Headquarters Staff.

Secretary, Sir Edward Appleton, K.C.B., D.Sc., LL.D.,
 F.R.S. £3,000

Private Secretary, C. Jolliffe.

Principal Assistant Secretary, E. Barnard, C.B.E.,
 D.S.O. £1,700

Assistant Secs., O. F. Brown; G. R. D. Hogg
 (Establishment Officer); R. O'F. Oakley, O.B.E.;
 S. J. Wheelodon, O.B.E. £1,500

Finance and Accounts Officer, A. R. H. Cox £1,250

Assistant Establishment Officer, C. D. James £1,200

Principal Scientific Officer, H. Buckley; S. T. C.
 Crawhall; C. A. Spencer; H. Wooldridge, O.B.E.
 £850 to £1,050

Temporary Principal Scientific Officer, W. L. Francis.
 £850 to £1,050

Senior Scientific Officers, G. Bird; R. O. Jones
 £680 to £800

Temporary Senior Scientific Officer, H. K. Warr-
 Langton.

Senior Staff Officers, F. H. Bell; S. L. W. Crawford;
 W. J. Gower; T. Lacey £650 to £750

Scientific Officers, E. J. Dowden, M.C.; C. Jolliffe
 (allowance £150); S. E. B. Solomon, £400 to
 £680; Miss N. Sullivan £350 to £580

Staff Officers, M. Cooley; J. Croston; J. R. Cussens;
 F. W. Smith; S. R. Welch, £550 to £650;
 Miss M. J. O'Reilly £450 to £525

Higher Grade Clerks, S. R. Fiddler; F. A. Foot;
 J. W. Newell, £400 to £525; Miss K. F. Bailey;
 Miss E. Cox; Miss E. L. Larcombe; Miss M. B.
 Waters £320 to £420

Building Research.

Chairman of Board, Sir George Burt, F.I.O.B.

Building Research Station,

Bucknalls, Garston, near Watford.

Director, I. G. Evans; S. R. Reginald Stradling, C.R.,
 M.C., D.Sc., Ph.D., M.Inst.C.E., F.R.S.

£1,360 to £1,650

Assistant Directors, SR. Fitzmaurice, M.Inst.C.E.;
F. M. Lea, O.B.E., D.Sc. £1,050 to £1,250
Principal Scientific Officers, A. Bailey (allowance
£700); D. G. R. Bonnell, Ph.D.; L. F. Cooling;
S. W. L. Cowley; N. Davey, Ph.D., M.Inst.C.E.;
G. Grime; T. W. Parker, Ph.D., F.R.I.C. £850 to £1,050

Adviser on Fire Problems, F. W. Jackson, C.B.E.,
D.S.O.

Senior Scientific Officers, SH. E. Beckett; G. E.
Bessey; R. C. Bevan; SF. L. Brady; A. F.
Duffon; SE. N. Fox, Ph.D.; S. B. Hamilton;
H. M. Llewellyn; R. L. Schaffer; A. W.
Skempton; F. G. Thomas, Ph.D. £680 to £800
Temporary Senior Scientific Officers, F. L. Barrow;
C. C. Handlyde.

Scientific Officers, W. A. Allen; N. S. Billington;
B. utterworth; A. D. Cowper; F. C. Harper,
Ph.D.; F. E. Jones; J. F. J. McConnell, F.R.I.C.;
G. R. Mitchell; R. W. Nurse; J. Shaw; SF. L.
Shipman, O.B.E.; L. G. Simms; SJ. Wallace;
C. M. Watkins, Ph.D.; Miss E. B. Philip £350 to £580

Temporary Scientific Officers, H. V. Apar; H.
Bagenal; S. M. Cleator; J. C. Eastwick-Field;
S. J. Edwards; C. R. Lee; J. J. McNamee; A. M.
Mitchell; G. W. Mollie; A. P. Pott; A. Schwarcz;
B. C. G. Shore; W. H. Ward; J. H. H. Wilton;
G. Welch; P. Wright.

Assistants, W. R. M. Pippard; S. C. Rockliffe,
£400 to £580; H. Andrews; L. A. Ashton;
M. J. Eldridge; J. F. Fry; A. J. Gardner; W. G.
Grindle; A. J. Newman; C. T. Webster £400 to
£525; Miss G. E. Dent; Miss A. N. A. Gibson,
£325 to £475

Temporary Assistant L. W. Dewar.
Accountant, Miss E. A. Leighton, M.B.E. £515 to £700

Higher Grade Clerk, Miss N. M. Cragg
£320 to £420

Chemical Research.

Chairman of Board, Prof. Sir Robert Robinson,
D.Sc., LL.D., F.R.I.C., F.R.S.

Chemical Research Laboratory, Teddington, Middlesex.

Superintendent, D. D. Pratt, Ph.D. £1,050 to £1,250

Principal Scientific Officer, W. H. J. Vernon, D.Sc.,
Ph.D., F.R.I.C. £850 to £1,050

Senior Scientific Officers, H. J. Bunker; F. H.
Burstall; K. R. Butlin; E. A. Coulson, D.Phil.;
G. R. Davies, Ph.D.; D. Y. N. Hardy, Ph.D.;
SN. J. L. Megson; J. G. Mitchell, Ph.D.; R. St. J.
Preston, F.R.I.C.; F. Wormwell, £680 to £800
Scientific Officers, K. W. Clark; J. I. Jones, F.R.I.C.;
K. W. Pepper, Ph.D. £400 to £680

Temporary Scientific Officers, G. E. Little; J. Sheridan;
N. E. Topp, Ph.D.

Assistant L. W. S. Greaves; R. Handley; T. J.
Nurse; V. A. Yardley £400 to £515

Higher Grade Clerk, C. B. Hillman, £400 to £525

Food Investigation.

Chairman of Board, Prof. Sir Joseph Barcroft, C.B.E.,
F.R.S.

Director, C. S. Hanes, Ph.D., F.R.I.C., F.R.S. £1,400
Assistant to Director, A. J. M. Smith, Ph.D.
Scientific Officer, L. W. Mapson, Ph.D. £400 to £680

Higher Grade Clerk, Miss F. A. Saxton
£320 to £420

Low Temperature Research Station.

Downing Street, Cambridge.

Superintendent, F. Kidd, D.Sc., F.R.S. £1,050 to £1,250

Principal Scientific Officers, E. H. Callow, Ph.D.,
F.R.I.C.; J. Barker, Ph.D.; E. C. Bate-Smith,
Ph.D.; R. G. Tomkins, Ph.D. £850 to £1,050

Senior Scientific Officers, J. Brooks, Ph.D.; R. Kane,

Ph.D.; C. N. Lea, Ph.D.; T. N. Morris; SJ. G.
Sharp, Ph.D. £680 to £800

Scientific Officers, J. M. Bryan, Ph.D.; P. R. P.
Claridge; J. C. Fidler, Ph.D.; J. R. Hawthorne,
Ph.D.; M. Ingram, Ph.D.; F. A. Isherwood, Ph.D.;
J. Pace, Ph.D. £400 to £680

Temporary Scientific Officers, R. J. L. Allen, Ph.D.;
J. R. Bendall; S. T. P. Brightwell; W. G.
Burton; R. Davies; A. J. Ede; H. G. Wager,
Ph.D.

Assistant L. H. P. Hale; L. Russell; A. Snow, £400
to £515; Miss D. G. Griffiths; Miss A. E.
Glennie. £325 to £415

Staff Officer, R. Johnson. £520 to £620

Torry Research Station.

Aberdeen.

Officer-in-Charge, G. A. Reay, Ph.D. £850 to £1,050

Senior Scientific Officer, SJ. A. Lovren, D.Sc., Ph.D.,
F.R.I.C. £680 to £800

Scientific Officers, A. Banks, Ph.D., F.R.I.C.; C. L.
Cutting, Ph.D.; J. M. Shewan, Ph.D. £400 to £680

Assistant L. C. T. House £400 to £515

Diton Laboratory.

East Malling, near Maidstone, Kent.

Superintendent, C. West, D.Sc. £850 to £1,050

Senior Scientific Officer, SJ. K. Hardy, £680 to £800

Scientific Officers, K. C. Hales; A. C. Hulme, Ph.D.;
W. H. Smith. £400 to £680

Assistant L. C. W. Croxon; C. R. Furlong; G.
Mann. £400 to £515

Forest Products Research.

Chairman of Board, Prof. V. H. Blackman, sc.D.,
F.R.S.

Forest Products Research Laboratory.

Princes Risborough, Aylesbury, Bucks.

Director, F. V. Henderson, D.Sc., D.I.C. £1,400

Director, W. A. Robertson, D.Sc., D.I.C. £1,400

Timber Mechanics Officer, C. J. Chaplin. £1,150

Principal Scientific Officers, K. T. St. G. Cartwright;
S. T. C. Stillwell. £850 to £1,050

Senior Scientific Officers, W. W. Barkas; J. Bryan;
W. G. Campbell; R. C. Fisher, Ph.D.; P. Harris
£680 to £800

Scientific Officers, F. H. Armstrong; R. G. Bateson;
SF. R. Cann; SS. H. Clarke; H. A. Cox; W. P. K.
Findlay, D.Sc.; F. S. Hearmon; R. A. G. Knight;
J. Latham; E. H. Nevard; SE. W. J. Phillips;
B. J. Rendle; N. A. Richardson; SE. D. van Rost;
W. C. Stevens, £400 to £680; Miss
C. B. Pettifor. £350 to £580

Temporary Scientific Officer, A. V. Thomas.

Assistant L. A. J. Foord; W. R. Hutchins; D. D.
Johnston; C. J. N. McCracken. £400 to £515

Staff Officer, L. Forbes. £350 to £650

Fuel Research.

Chairman of Board, Sir Harold Hartley, K.C.V.O.,
C.B.E., M.C., D.Sc., F.R.S.

Fuel Research Station.

Blackwall Lane, East Greenwich, S.E.10.

Director, A. Parker, D.Sc., F.R.I.C., M.I.Chem.E. £1,350 to £1,650

Assistant Director, J. A. C. Monkhouse
(+allowance £150), £1,000

Principal Scientific Officers, A. Blackie, Inst.P.; A. T.
Barber, M.I.Mech.E.; D. T. Davies, Ph.D.; T. F.
Hurley, O.B.E.; D. Macdougall, F.R.I.C.; A. B.
Manning, Ph.D. £850 to £1,050

Senior Staff Officers, G. C. Ackroyd; H. Bardgett;
J. H. G. Carille; C. M. Cayley, Ph.D., F.R.I.C.;
H. E. Crossley, Ph.D.; C. C. Hall, Ph.D., F.R.I.C.;
L. Horton, Ph.D.; A. C. Maries; A. H. Taylor,
M.B.E.; R. A. A. Taylor, F.R.I.C.; E. T. Wilkins,
Ph.D.; F. A. Williams, Ph.D. £680 to £800

Scientific Officers, K. V. Aubrey; C. Baker; R. B. Clarke; W. J. Collins; S. R. Craxford, Ph.D.; A. Fittion; L. I. Fox; D. Gall, Ph.D.; E. F. G. Hierington, Ph.D.; L. J. Joller, Ph.D.; F. E. T. Kingman, Ph.D.; F. R. I. C.; A. R. Meetham, D.Phil.; H. E. Newall, D.Sc., Ph.D.; R. B. Randall, Ph.D.; F. M. Reynolds, Ph.D.; S. H. Richards; S. J. Rogers; R. H. Rowse, F.Inst.P.; L. R. B. Shackleton, Ph.D.; W. J. Sparkes; J. A. Tebboth; W. J. S. Walker, Ph.D., F.R.I.C.

Temporary Scientific Officer, G. H. Dazeley, Ph.D.

Assistants I., T. Bound; L. J. Edgcombe; W. C. Moss; C. W. G. Ockelford, F.Inst.P., £400 to £580; C. C. Noaks; H. J. Orton; N. E. Pettit, Ph.D.; C. P. Sayles, £400 to £515

Senior Staff Officer, C. B. Fitzgerald

Higher Grade Clerks, P. H. Picton; R. Kage (allowance £50) £400 to £525

Physical and Chemical Survey of National Coal Resources.

Principal Scientific Officers, A. Dawe, F.R.I.C. (Nottingham); D. Hicks, F.R.I.C. (Cardiff); J. H. Jones, Ph.D. (Newcastle); L. Slater, Ph.D. (Sheffield); A. M. Wandless, F.R.I.C. (Leeds) £850 to £1,050
Senior Scientific Officers, J. O'N. Millott, Ph.D. (Chester); F. Scarf, F.R.I.C. (Birmingham); W. J. Skilling, F.R.I.C. (Glasgow) £680 to £800
Scientific Officers, H. Berry (Chester); J. R. Campbell, Ph.D., F.R.I.C. (Glasgow); G. Coles, Ph.D. (Nottingham); G. W. Fenton, Ph.D. (Sheffield); D. A. Hall, Ph.D., F.R.I.C. (Birmingham); W. E. Harris, Ph.D. (Cardiff); J. C. Macrae, F.R.I.C. (Leeds); S. T. Tomlinson (Newcastle)

Assistant I., H. F. Adams, F.R.I.C. (Cardiff); C. W. Yearsley (Birmingham) £400 to £525

Pest Infestation Research.

Chairman of Committee, Prof. D. Keilin, D.Sc., F.R.S.

Pest Infestation Laboratory.

Biological Field Station, Slough, Bucks.

Principal Scientific Officer, G. V. B. Herford £850 to £1,050

Senior Scientific Officer, E. A. Parkin, Ph.D. £680 to £800

Scientific Officers, S. J. A. Freeman, Ph.D.; A. E. H. Higgins; R. W. Howe; T. A. Oxley

Temporary Scientific Officer, W. B. Brown; M. E. Solomon; F. P. W. Wateringham

Radio Research.

Chairman of Board, Lt.-Col. Sir George Lee, O.B.E., M.C., M.I.E.E.

Radio Research Station.

Slough, Bucks.

(Staff included under National Physical Laboratory, Radio Division)

Road Research.

Chairman of Board, Sir Frank Edward Smith, G.C.B., G.B.E., D.Sc., LL.D., F.R.S.

Road Research Laboratory.

Harmondsworth, West Drayton, Middlesex.

Director, W. H. Glanville, C.B.E., D.Sc., Ph.D., M.Inst.C.E. £1,400

Principal Scientific Officers, W. V. Davies; A. R. Lee, Ph.D.; A. H. Markwick, M.Inst.C.E.; F. N. Sparkes; A. G. Tarrant, F.Inst.P. £850 to £1,050

Senior Scientific Officers, T. J. Lonsdale, Ph.D., F.Inst.P.; A. C. Whiffin, £680 to £800

Temporary Senior Scientific Officer, E. E. Morgan.
Scientific Officers, A. R. Bryant; G. Charlesworth,
